How to Use Our Business and Product Sections

The Business and Product Sections of this Directory are included for the service of members so that this book will be complete as an index of an industry—listing Engineers, the Businesses they have founded, and the Products they have created for radio, television, communications, and electronics.

The following 4 Sections of the IRE DIRECTORY are:

Part		Page
1	Pink Section—Alphabetical List of Products & Group Arrangement	i-viii
2	Complete-Data-Spreads Section	2-128
3	Company List of Radio-Electronic Manufacturers	131-237
4	Product Index of Engineering Equipment and Parts —Advertisers Index—Facing Cover III	241-581

SECTION 2

Part 2 is one of the most informative and valuable sections of this Directory. Here manufacturers are supplying engineers with the maximum amount of detailed information possible through the use of multiple page spreads of their products (see page 2). The purpose of this section is to give the engineer a complete and ever available catalog file right in his IRE Directory where he can always see it easily and quickly. We believe that the services of this section will be of the utmost help to you.

SECTION 3

2760 firms have supplied us voluntarily with information about the components, equipment and services which they render the radio-electronic industry. The manufacturers are listed alphabetically in this section beginning on page 131 and ending on page 237. 1168 non-manufacturers such as distributors and representatives are listed under heading 10, a special directory. This index therefore gives the names of manufacturers of specific products available for purchase, with their addresses and code numbers indicating 104 types of products which they offer.

The completeness of this list depended on information voluntarily supplied us. Our most vigorous efforts may not have made it complete, but the excellent cooperation received from most of the industry is directly responsible for the up-to-dateness of our product data. We will welcome additions and suggestions for the 1955 edition.

SECTION 4

The Product sections start on page 241 and continue through 581. In both the alphabetical and the product indexes advertisers who have made it financially possible to provide a really comprehensive Directory to IRE members, have been listed in bold face type with a cross index to the page on which their display advertisement appears—giving complete information on their products and services. Non-advertisers have been listed in the product indexes giving firm name and state only. For full address the reader must turn to the alphabetical index for these companies.

To find the manufacturers of a given product, let us say "Audio Amplifiers" look this product up in the Pink Section, preceding page 1. You will see that it is classification Number 1. A full listing of audio amplifier manufacturers starts on page 241. Turn to this classification in part 4.

As a service to engineers, both buyer and seller, we have included a list of 1168 firms and individuals who are distributors. Each name is further classified by number to indicate its place in the field—representative, distributor, exporter, etc. This is class #104, starting on page 559.

There are several other helpful indexes. Advertisers are given on pages 583-584 (inside back cover); and an index to 1954 Radio Engineering Show Exhibitors and Proceedings Advertisers who are in this Directory is on pages 116-128.

To get a comprehensive picture of what a given firm manufactures for engineers in our field, you will find in the alphabetical index of companies that all their products are listed by code number after the firm's name and address. These products are classified into ten separate Product Directories, serving basic sections of our industry. We have tried vigorously to make this truly a useful "Radio Engineers Directory."

Please submit all changes, corrections, additions and classification questions to Industry Research Div., Institute of Radio Engineers, 1475 Broadway, New York 36, N.Y.

How to Use the Machol Edge Index

High speed reference is a major objective of the IRE Directory. To this end we have adopted the Machol Edge Index system, and these indexes:

Advertisers Index, pages 583-584.

Key to Products, Pink Section.

Index to Spreads, 1.

Guide to Machol Thumb Indexes facing 240, 270, 400 & 476.

2	PART I COMPLETE DATA SPREADS
131	PART II ALPHABETICAL COMPANY LIST
241	PART III APPARATUS
271	PART IV COMPONENTS
401	PART V INSTRUMENTS & CONTROLS
477	PART VI SERVICES & MATERIALS

The Machol system will help you find both alphabetical and product sections swiftly.

INSTRUCTIONS

1. **With the Directory open on the desk, bend the book almost double in your left hand, with your thumb just above this box.**
2. **From one-line or two-line symbol adjacent to the letter or subject you seek, run your eye across horizontally to a corresponding page-edge symbol.**
3. **Open there with right hand.**

Product	Page
resistors, carbon fixed	359
resistors, carbon, variable	359
resistors, deposited carbon	359
resistors, printed circuit	359
resistors, vacuum sealed	359
resistors, very high megohm	359
resistors, wirewound, fixed	359
resistors, wirewound, precision	359
resistors, wirewound, variable	359
retaining rings	500
rheostats	359
rivets	500
rods, plastic	541
rooms, shielded	441
rubber insulation	519
—s—	
SWR meters	457
sales & service	559
scalers, nuclear	412
screen rooms	441
screws, nuts & washers	500
sealing & potting compounds	527
secondary standards of frequency	455
secondary standards of time	455
selective calling equipment	267
selenium diodes	351
selenium stacks	351
semi-conductors	369
servo amplifiers	271
servo-mechanisms, gears, gear-trains, etc.	413
servo motors & generators	413
shielded enclosures	441
shielding materials	441
shipborne communications	266
shock mounts	500
signal generators, AM	469
signal generators, FM	469
signal generators, TV	475
silicon rectifiers	351
silicones	527
slotted lines	457
sockets, capacitor, plug-in	370
sockets, receiving tube	370
sockets, transmitting tube	370
sockets, UL approved industrial types	370
solder, acid core	545
solder dipped prewired chassis	347
solder, fluxes	545
solder, plain	545
solder, precious metal	545
solder, pre-forms	545
solder, rosin core	545
soldering irons & guns	529
solenoids	371
sound systems industrial—installation & rental	245
spectrum analyzers	435
speech input equipment	259
springs	500
square wave generators	435
stampings	547
stimulators	411
strain gauges	443
strain reliefs	500
stroboscopes	443
studio equipment	259
styli, cutting	251
styli-diamond	250
styli-metallic	250
styli-sapphire	250
stylus resharpening	251
suction pumps & equipment, recording	251
surplus dealers	559
survey meters	465
SWR meters	457
switches, band	371
switches, co-axial	371
switches, foot	371
switches, key	371
switches, mercury	371
switches, momentary contact	371
switches, power	371
switches, precision snap-acting	371
switches, rotary	371
switches, slide	371
switches, spring-return	371
switches, thermally operated	371
switches, toggle & push button	371
switches—wave guide	429
synthetics, insulating	519

Guide to Directories and Product Classes

1. Audio Frequency Equipment.

01 Amplifiers. Page 241
- 05 Decade amplifiers
- 10 Dynamic noise suppressors
- 15 Hearing aid
- 20 High fidelity
- 25 Inter-coms
- 30 Phonograph pre-amplifiers
- 35 Power amplifiers—recording
- 40 Public address

02 Attenuators. Page 243
- 05 Decade
- 10 Impedance matching
- 15 Volume controlling

03 Equalizers. Page 243
- 05 Dialogue equalizers
- 10 Line equalizers
- 15 Magnetic recording
- 20 Recording diameter equalizers
- 25 Sound effect equalizers

04 Filters. Page 244
- 05 Band pass & band rejection
- 10 Loudspeaker dividing networks
- 15 Variable band pass

05 Industrial Sound Systems. Page 245
- 05 Complete systems
- 10 Installation & rental contractors

06 Jacks, Jack Fields & Plugs. Page 245
- 05 Jacks
- 10 Jack fields
- 15 Patch cords
- 20 Plugs

07 Loudspeakers & Headphones. Page 247
- 05 Commercial grade loudspeakers
- 10 Headphones
- 15 High-frequency loudspeakers
- 20 Low-frequency loudspeakers
- 25 Wide-range, 2 & 3 way systems

08 Microphones & Stands. Page 249
- 05 Carbon
- 10 Ceramic
- 15 Condenser
- 20 Crystal
- 25 Dynamic
- 30 Velocity
- 35 Microphone stands

09 Phonograph, Pick-ups, Record Changers, etc. Page 250
- 05 Phonograph motors
- 10 Pick-ups—crystal
- 15 Pick-ups—dynamic
- 20 Pick-ups—magnetic
- 25 Pick-ups—reluctance
- 30 Playback arms
- 35 Record changers
- 40 Record players
- 45 Styli-diamond
- 50 Styli-metallic
- 55 Styli-sapphire
- 60 Tape phonographs & playback equipment

10 Recording Accessories & Supplies. Page 251
- 05 Blank disks
- 10 Cutting heads
- 15 Cutting styli
- 20 Magnetic recording, playback & erase heads
- 25 Magnetic recording tape-acetate base
- 30 Magnetic recording tape-paper base
- 35 Magnetic recording wire
- 40 Stylus resharpening
- 45 Suction pumps & equipment
- 50 Tape splicing equipment.

11 Recording Equipment. Page 253
- 05 Disk recorders
- 10 Embossing types of recorders
- 15 Magnetic tape recorders
- 20 Magnetic wire recorders

2. Broadcasting: Both Aural & Visual; Receivers, Transmitters & Associated Equipment.

12 Antennas & Accessories. Page 255
- 05 AM broadcast transmitting
- 10 FM broadcast transmitting
- 15 TV broadcast transmitting
- 20 Supporting towers
- 25 Tower lighting equipment
- 30 Tower erection & maintenance service

13 Monitor Equipment. Page 256
- 05 Frequency
- 10 Modulation
- 15 Remote control monitors
- 20 Video monitors

14 Receivers. Page 257
- 05 AM broadcast
- 10 AM shortwave
- 15 FM broadcast
- 20 TV broadcast—B & W
- 25 TV broadcast—Color

15 Services for the Broadcaster. Page 259

1954 IRE DIRECTORY
Complete-Data-Spreads

The full spirit of the IRE DIRECTORY is to give the reader-engineer "facts" in complete detail, and specific enough to be of useful service. Our advertisers have recognized this, and many have made their copy presentation full of useful specifications and illustrations.

Actually, a Directory Publisher cannot hope to describe products adequately in standardized listings. Only the Advertiser, using display space, and with his own intimate knowledge of his service or product, can do that job right.

The advertisers listed below have done their utmost to provide the reader with engineering data in full detail, through spreads and catalogs filed in this book for easy access and permanent reference. This can prove to be the most useful part of the 1954 IRE DIRECTORY to you.

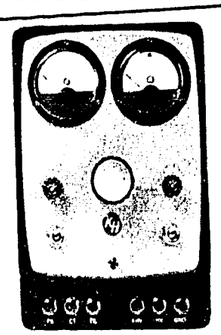
INTRODUCES 5 NEW INSTRUMENTS

SQUARE WAVE RESPONSE

1 ULTRA-LOW DISTORTION



power amplifier

DELIVERING **99.99999996%*** **DISTORTION-FREE POWER**

MODEL UF-101 SPECIFICATIONS

POWER OUTPUT..50 watts from 15 cps to 20 kc ±1 db
FEEDBACK..... 80 db
FREQUENCY RESPONSE ±0.5 db from 0.5 cps to 30 kc ±3 db from 0.03 cps to 70 kc
DYNAMIC RANGE.....110 db
OUTPUT IMPEDANCE. 2, 4, 8, 16 and 450 ohms
VOLTAGE GAIN..14 db or 30 db to 16 ohm output
PRICE.....$350.00

*Typical harmonic distortion at 1,000 cps is 0.002% in voltage or 0.00000004% in power at 30 watts.

	Model	Voltage	Current	Impedance		Output		Price
				D.C.	A.C.	Bias	Heater	
2	UHR-220	0-500v	0-200ma	0.01	0.1	0-150v, 0-5ma	12.6v ac, 4a CT	$350.00
3	UHR-225	150-500v	0-200ma	0.01	0.1	—	12.6v ac, 4a CT	$300.00

NEW UHR SERIES power supplies

FEATURING **ultra-high regulation**

OVER THE **entire** OPERATING RANGE

- Regulation 0.001%
- Extremely low dc and ac impedance
- Ripple less than 100 microvolts
- Transient response 0.001 milliseconds

	Model	Voltage	Current	Impedance		Output		Price
				D.C.	A.C.	Bias	Heater	
4	UHR-240	0-500v	0-500ma	0.005	0.05	0-150v, 0-5ma	5-13v dc, 5a CT	$550.00
5	UHR-245	150-500v	0-500ma	0.005	0.05	—	12.6v ac, 10a CT	$450.00

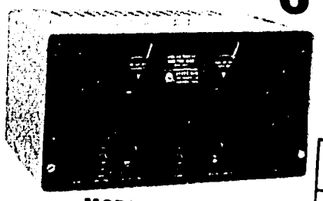
PRESENTS THIS PROVEN GROUP OF electronic instruments

8 WIDE-RANGE AUDIO oscillators

0.001 cps to 520 kc

MODEL 440-A

Features



- Frequency range, continuous from 0.001 cps. to 100 kc
- Distortion less than 0.1% at any output level
- Excellent frequency stability and resetability
- Amplitude variation less than ±0.25 db
- Frequency calibration ±1%
- Both Sine and Square Waves simultaneously
- Hum less than 0.1% at any output level

Model	Frequency Range	Frequency* Accuracy	Output	Distortion	Power Consumption	Price
400-A	.009 cps to 1.1 kc	2%	25 mw/10v	1%	45 watts	$350.00
410-A**	.02 cps to 20 kc	2%	10 mw/5v	1/10%	150 watts	$950.00
420-A	.35 cps to 52 kc	2%	25 mw/10v	1%	45 watts	$290.00
430-B**	4.5 cps to 520 kc	2%	50 mw/10v	1%	45 watts	$120.00
400-C***	.009 cps to 1.1 kc	2%	100 mw/10v	1%	65 watts	$375.00
420-C***	.35 cps to 52 kc	2%	100 mw/10v	1%	65 watts	$325.00
440-A**	.001 cps to 100 kc	1%	100 mw/10v	1/10%	120 watts	$495.00
440-B**	1 kc to 100 cps	1/20%	100 mw/10v	1/10%	110 watts	$950.00

All oscillators except 430-B and 440-B have both sine wave and square wave.

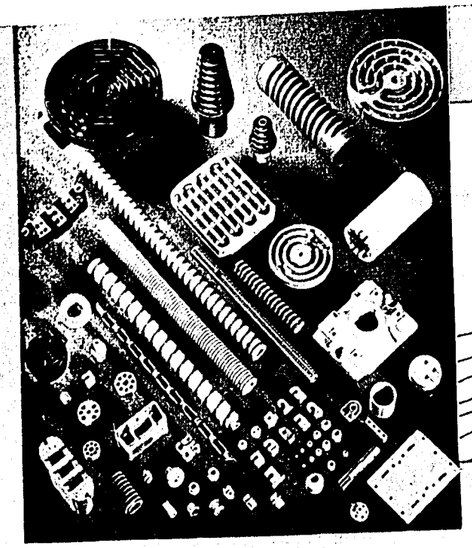
6 VARIABLE ELECTRONIC filters

0.01 cps to 200 kc

MODEL 330

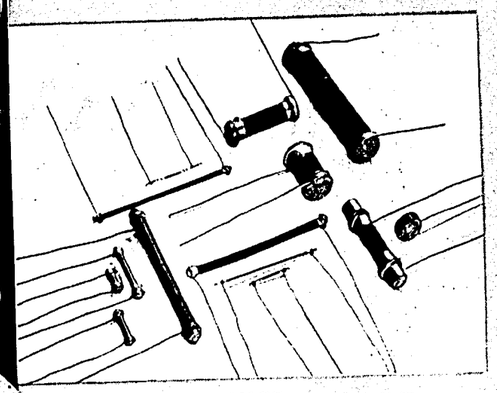
Features

- Unity Pass band gain with 24 db/octave attenuation rates and reduced corner frequency attenuation
- Ultra-low frequency coverage with adjustable center frequency and band width
- Low internally generated noise
- Input and output buffer stages
- Electronic regulated supplies
- Five decade bands



Model	Type	Frequency Range	Frequency* Accuracy	Noise & Hum	Power Consumption	Price
310-A**	Band Pass	20 cps to 200 kc	10%	3 mv	40 watts	$275.00
330-A**	Band Pass	.02 cps to 2 kc	5%	0.1 mv	50 watts	$450.00
330-M**	Band Pass	0.2 cps to 20 kc	5%	0.1 mv	50 watts	$450.00
340-A	Servo	0.1 cps to 100 cps	5%	10 mv	40 watts	$350.00
350-A**	Rejection	.02 cps to 2 kc	5%	0.1 mv	50 watts	$450.00
360-A**	Rejection	20 cps to 200 kc	10%	5 mv	40 watts	$275.00

*Slightly higher at ends of dial.
***Rack panel construction.
**Available for rack mounting at $5.00 additional.



A NEW **CATALOG** GIVING COMPLETE DESCRIPTIONS OF THE ENTIRE LINE IS AVAILABLE UPON REQUEST. PLEASE WRITE

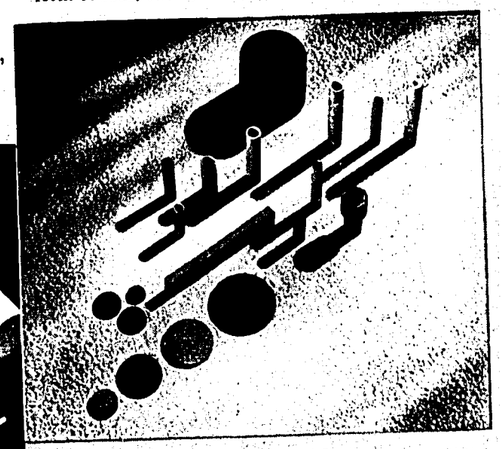
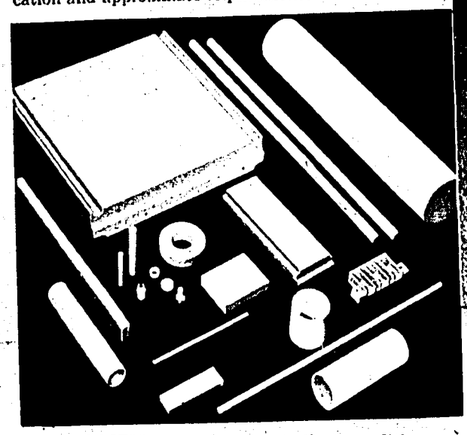
INSTRUMENT COMPANY
Dept. B, 580 MASS. AVE., CAMBRIDGE 39, MASS.



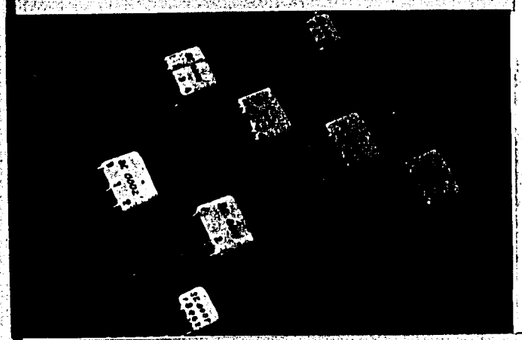
Stupakoff PRODUCTS



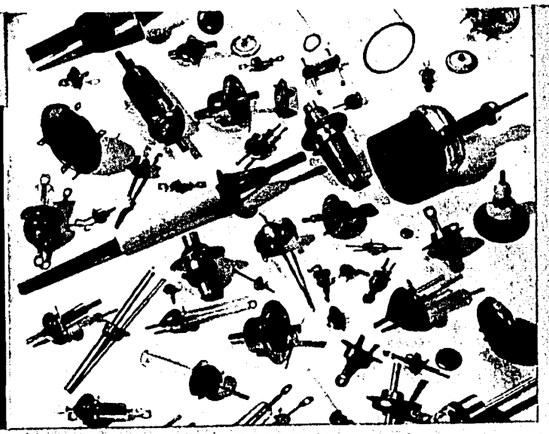
CERAMIC PRODUCTS—Stupakoff is a leading supplier of pressed, extruded, machined, ground and assembled ceramic products for electrical and electronic applications, for all voltages, frequencies and temperatures. Specialized resistor ceramics, metallized ceramics, high thermal shock resisting ceramics and ceramic dielectrics are described below. Send for information, giving proposed application and approximate requirements.

RESISTOR CERAMICS—Stupakoff Temperature-Sensitive Resistors are used for temperature indicating or measuring equipment such as Radiosonde, for infra-red light source and for heating elements. Supplied complete with terminals, in the form of rods, tubes, discs, bars, rings, etc.

STUPALITH—Where thermal shock conditions prevail, parts made of STUPALITH will withstand extremely severe service. Stupakoff makes parts ranging from a fraction of an ounce to several pounds in weight, in simple or intricate shapes, by pressing, extrusion, casting or ramming.



Two principal compositions are ordinarily employed: "zero" expansivity compositions, and nonporous compositions having near-zero expansivities. For parts requiring a high degree of dimensional accuracy, our production process includes machining or grinding to precision tolerances. Safely used at temperatures up to 2400°F.



CERAMIC DIELECTRICS—Stupakoff makes general purpose Ceramic Dielectrics for by-pass, lead through blocking, standoffs and trimmer applications. Temperature compensating Ceramic Dielectrics have coefficients from P-100 to N-2700, and high K materials up to K-6000. Made in the form of tubes, discs and special shapes, plain or silvered.

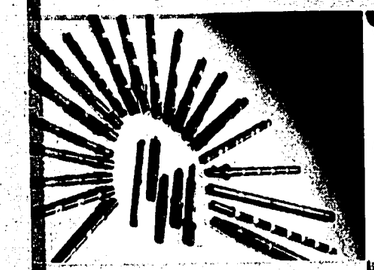
STUPAKOFF CERAMIC & MANUFACTURING CO.
LATROBE, PENNSYLVANIA
DIVISION OF THE CARBORUNDUM COMPANY

for Electrical and Electronic Applications

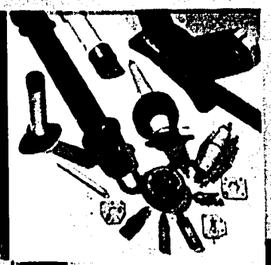
CERAMIC ASSEMBLIES

PRINTED CIRCUITS—By combining resistors and capacitors of precision values, in circuits designed in accordance with the requirements of individual applications, Stupakoff printed circuits save space and weight, speed assembly, reduce costs, minimize assembly errors. Soldered connections are reduced by 25% to 80%, assemblies are lighter and more compact, production time is reduced and better products are made. Sturdy, compact, accurate.

METALLIZED CERAMICS



The rotor shafts shown below consist of metal bands attached securely to ceramic rods and are typical of Stupakoff precision manufacture. On a mass production basis, concentricity of components, for example, is held to less than ±0.001 in.

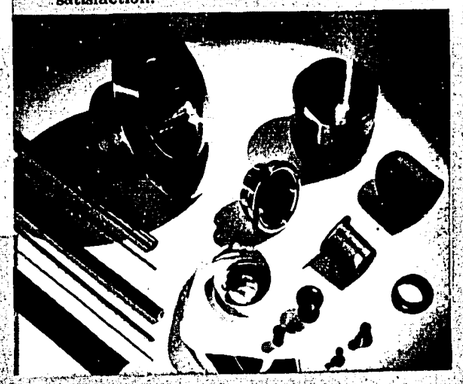


Readily available in production quantities.

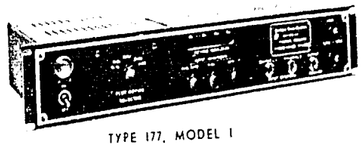
KOVAR-GLASS SEALS

Perfectly closed and durable air-tight assemblies are made with Stupakoff Kovar-Glass Seals. The use of hard glass for these seals provides the highest degree of protection against thermal shock and weathering. Kovar is the ideal metal for such seals because its expansion characteristics closely match those of the hard glass to which it is readily bonded. The resulting seals are uniform in quality and easily assembled.

Stupakoff Seals are available in a wide variety of standard sizes and designs, and can be made in many special forms, as indicated by the illustration above. Extensive experience has given Stupakoff the engineering and manufacturing knowledge and skill to produce Kovar-Glass Seals that are made accurately, uniform and dependable. We will gladly submit samples and quotations.

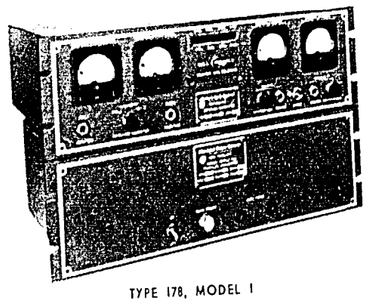


STRAINS, STAND-OFFS



The metallized strains, spreaders and standoffs shown above and to the right are precision-made, and meet the most exacting requirements.

KOVAR METAL—The ideal alloy for glass sealing, Kovar matches the expansivity of hard glass over the entire working temperature range. It resists mercury attack, has ample mechanical strength and seals readily with simple oxidation procedure. It is available as sheet, strip, foil, rod, tube, wire—or fabricated into cups, eyelets, leads and other shapes. The prominent users of KOVAR and the length of time they have employed this metal are convincing proof of satisfaction.



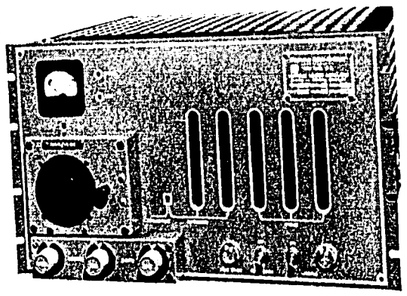
Commerce and the Military write THEIR SPECIFICATIONS to...

NEW! TWINPLEX COMMUNICATION UNITS

TYPE 177, MODEL 1

TYPE 178, MODEL 1

This Twinplex communication system makes possible a 2-channel radio circuit whereby 2 non-synchronous or synchronous telegraph transmissions modulate a single radio carrier wave by causing the carrier to assume one of four specific frequencies with 400 cps separations.



The transmitting equipment consists of the Twinplex Combiner Type 177 Model 1 and an RF Frequency Shift Keyer such as the Northern Radio Type 105 Model 4. The Combiner converts the four possible conditions of two telegraph signals (M1-M2, M1-S2, S1-M2, S1-S2) respectively into one of four voltages related in a 0-1-2-3 manner. The Combiner output voltage modulates the FS Keyer.

The receiving equipment consists of the Twinplex Converter Type 178 Model 1 and a single or diversity receiver such as the Northern Radio Type 110 Dual Diversity Receiving System. The Converter demodulates and separates the four audio tones from the radio receiver(s) into two channels each carrying the originally transmitted intelligence. The Twinplex Converter replaces the standard FS Converter for this purpose.

The two telegraph channels provide the same operational flexibility as that of two separate single channel FS systems. One can, for example, simultaneously use channel #1 or 60 wpm teletype and channel #2 on high-speed Morse or Time Division Multiplex. It further permits the reception of channel #1 signals on all standard FS converters (tunable to 400 cps shift) without need for a Twinplex Converter: this is valuable for "Forked Circuit Operation" where the intelligence of channel #1 is intended for pick-up by other receiving stations which are not equipped for Twinplex Reception in addition to the main receiving stations which are so equipped. Reception of channel #2 (or of both channels) requires the receiving end to be equipped with a Twinplex Converter.

NEW VARIABLE MASTER OSCILLATOR

- *Long-time stability 1 cycle per megacycle*
- *Variable to ANY frequency from 2 to 4 mc within 1 part per million*

TYPE 173, MODEL 1

The Northern Radio Company Variable Master Oscillator provides a continuously variable source of radio frequency energy with a stability of approximately 1 cycle per megacycle in the range of 2 to 4 megacycles. It has sufficient output to replace existing oscillators wherever a more stable and variable unit is required. It may be used as the basic control oscillator for diversity receivers, high frequency transmitters and other communications devices, or as a laboratory standard for test and measurement functions.

Its ease of operation and direct reading of frequency make it an outstandingly useful device where precise frequency control must be maintained by completely unskilled personnel. No curves, interpolations or calculations of any kind are required in its use. Frequency is set approximately to the desired value by rotating the oscillator dial. The last three digits of the frequency automatically pulls in to the value pre-set on the switches and holds with an accuracy that exceeds that of most temperature-controlled crystal oscillators.

The unit also provides a crystal controlled Beat Frequency oscillator for use in single or diversity receiving systems to provide stabilized BFO injection to the receivers.

An output is also provided from the high stability time base oscillator to make available its 100 KC frequency for use as a secondary standard. The stability of this output is one part in five million over any 12-hour period.

HIGH FREQUENCY OSCILLATOR

Output Frequency: 2—4 MC continuously variable.

Stability for any combination of temperature range from 0 to 50° C., and line voltage of 115 or 230 ± 10%: Approximately 1 cycle per megacycle.

Output Level: ½ watt into 75 ohm load. Level control on rear of chassis.

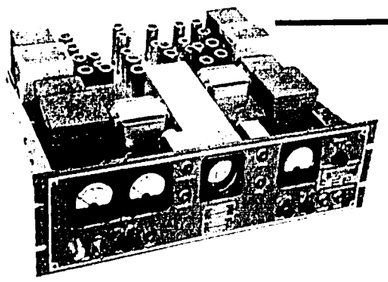
Readibility: ± 2.5 cycles per second. Direct digital readout on mechanical and electronic counters.

Resettability: Absolute

BEAT FREQUENCY OSCILLATOR

Output Frequency: 400—800 KC crystal controlled.

Output Level: 3.5 volts into 1000 ohm load. Level control on rear of chassis.



TIME BASE CRYSTAL OSCILLATOR

Output Frequency: 100 KC

Stability for 0 to 50° C and ± 10% Line Voltage change: 0.2 part per million for any 12 hour period; 1.0 part per million for thirty days.

Output Level: Approximately 2 volts.

Output Impedance: Approximately 100,000 ohms.

TYPE 174,
MODEL 1

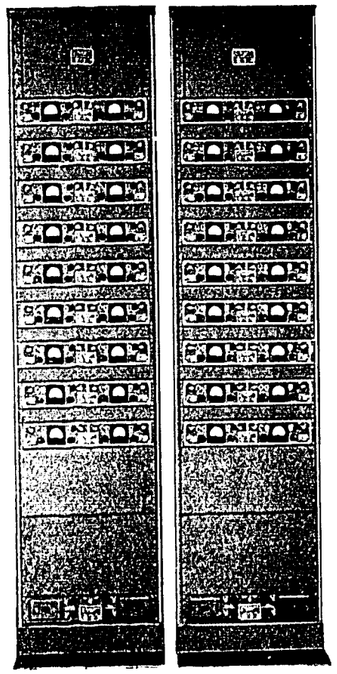
FREQUENCY SHIFT DIVERSITY CONVERTER

For use with either single-receiver frequency diversity systems or 2-receiver space diversity systems. The Type 174 Model 1 provides solid copy of signals which are 14 db below white noise level—making it the outstanding unit of today. By means of plug-in units, any reasonable number of channels is available between the frequencies of 425 and 3315 cps for either frequency or space diversity operation. For standard FS operation, the plug-in networks provide shift adjustments from 100 to 1000 cps shift.

Normal Input Level: —40 to +10 VU (Zero VU = 1MW into 600 ohms). (Satisfactory operation on fades to —60 VU.)

Limiter Recovery Time: Negligible for a 40 VU differential between Mark and Space frequencies.

Output: 65 ma into 2000 ohms floating (self-contained line battery).



Keying Speed: Maximum of 40 dot cycles with narrow band frequency diversity. Up to 400 dot cycles with the wide band networks.

Monitor: 2-inch Cathode Ray tube
Input phone jack
2 input volume level indicators
1 output current indicator

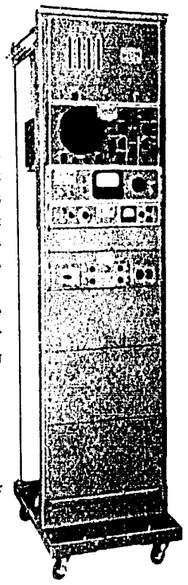
MULTI-CHANNEL FREQUENCY SHIFT TELEGRAPH SYSTEMS

Today's constantly growing demand for greater, faster, more dependable communications has made the need for improved Multiplex equipment more acute than ever before. In response to this need, Northern Radio Company now makes available several new Frequency Shift Multi-Channel Telegraph Systems. Reflecting the heritage of Northern Radio's constant research and precision manufacture over the years, these multi-channel systems display novel concepts of design together with outstanding performance, fidelity and operating economy.

These Multi-Channel Telegraph Systems are audio carrier systems capable of multiplexing such circuits as telephone lines, VHF, UHF, or radio frequency links—or practically any type circuit from which a two-wire audio circuit can be derived. Designed to meet any speed requirements, these systems are fully electronic, without relays or moving parts to wear. They can be used for high-speed printer, Morse or time division Multiplex circuits, as well as such applications as Telemetering, Control Circuits and Servo-Mechanisms. Instantaneous and complete sending end channel control permits any binary code groups, either "Clear Text" or "Cryptographic," to be channelized without need for additional phasing or synchronizing equipment, while paralleling of channels will allow for transmission of other type codes, such as 3 element cable code. The completely independent operation of each channel, including its own power supply, localizes faults to one channel only, leaving other channels unaffected. Individual channel separation filters are used at both transmitting and receiving ends. This arrangement allows for sending telegraph or control signals over a circuit carrying, simultaneously, other forms of intelligence: or for two-way communications on the same line.



The audio frequency shift principle of transmission provides for high fidelity of signal reproduction over a wide range of signal levels as well as under severe noise or interference conditions. Circuit requirements of any speed, shift and center frequency can readily be met. The systems illustrated is for use on printer circuits up to 100 WPM channel capacity. The system arrangement is very flexible, permitting grouping of the basic units into various arrangements of Multiplex Systems. These systems can be made to accommodate a large variety of channel numbers and speeds to meet any individual requirements. The flexibility is further improved by the fact that the racks, power control units, and terminal connection panels are the same for both transmitting and receiving terminals.

TEST BAY FOR TONE TELEGRAPH SYSTEMS

The Northern Radio Company Test Bay for Tone Telegraph Systems provides a complete terminal of test apparatus for testing, alignment and maintenance of Multi-channel Frequency Shift Telegraph Systems.

When used with such equipment, it performs the following main functions: (1) rapid and simple precision measurements of mark, space and center frequencies at both sending and receiving terminals; (2) precision frequency adjustment of FS Tone Keyers to specified channel Frequencies; (3) accurate tuning of FS Converter Units; (4) rapid evaluation of signal distortion; (5) measurements of tone and telephone line levels at both receiving and transmitting ends; (6) measurement of telephone line attenuation; (7) over-all system checks and alignment; (8) performance tests of Tone Multiplex Systems and associated equipment; (9) quick localization of systems faults; and (10), monitoring of all wave forms such as keying, keyed tone, etc.

The Test Bay consists of Electronic Square Wave Keyer (Dotter), Cathode Ray Oscilloscope, Frequency Counter, Volume Level Indicator and Rack including blank panels, patch cords and test probes.

TYPE 168
MODEL 1

TONE CHANNELING SYSTEMS

Complete package systems of Multi-Channel Tone Equipment (both AM and Frequency Shift) are available for line or radio link systems.

NORTHERN RADIO COMPANY, inc. *Pace-Setters in Quality Communication Equipment*

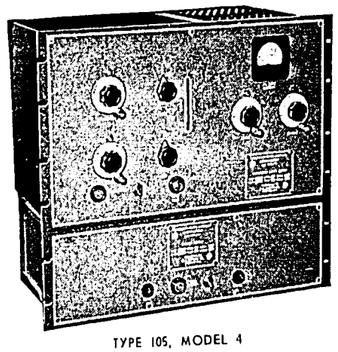
147 WEST 22ND STREET, NEW YORK 11, N. Y. **WATKINS 9-9117**

NORTHERN RADIO COMMUNICATIONS EQUIPMENT

VARIABLE MASTER OSCILLATOR

TYPE 115, MODEL 1

Principally used in diversity reception to supply local common oscillator injection voltage to receivers. Crystal oscillator for BFO. The Variable High Frequency section gives stability equivalent to that of non-temperature controlled crystal oscillators. It is also equipped with three crystal controlled frequencies for operation of receivers on a fixed frequency basis. The variable high frequency oscillator is provided with local crystal oscillator for spot checking of twenty points within its range.

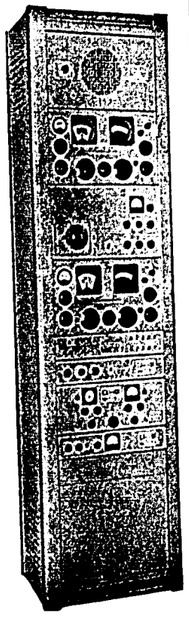


TECHNICAL DATA

Variable HFO output frequency	2-32 mcs continuous
Fixed Frequency crystals	2-4 mcs for output frequencies of 2-32 mcs
Output impedance	72 ohms coaxial cable
Output level	2 watts 2-4 mcs, 0.5 watts 4-32 mcs
Variable HFO Stability	20 cps per mc for ambient change +25° C.
	5 cps per mc for ± 10% Line Voltage
	20 cps per mc for resettability
	20 cps per mc for readability

This unit can also be used as a transmitter exciter or for laboratory measuring purposes.

FREQUENCY SHIFT KEYER

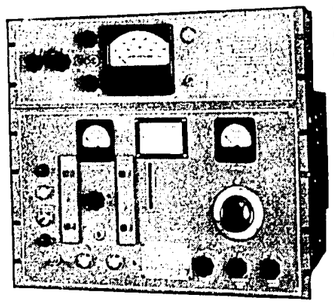


incorporates the following outstanding features:

TYPE 105, MODEL 4

Frequency shift dial adjusts "Mark" and "space" frequencies equally above and below the carrier position, which remains fixed. • Simplified frequency setting permits only the upper side band tuning indication to be visible on the meter over substantially all of tuning range. • Direct reading frequency calibration of shift from 0 to 1000 cycles. • Direct reading frequency calibration of mixer and output tuning dials from 2.5 to 6.7 mc, or 1.75 to 4.5 mc. • Direct reading of calibration of output frequency vernier ± 600 cycles. • Pulse shaping circuit to permit operation within assigned band-width with no adjacent channel radiation. • Highly stable temperature controlled oven with temperature control of ± 0.1° C. at 60° with heaters on 4 sides of inner oven. • Component ratings according to JAN Specs provide greater assurance of trouble-free operation.

DUAL DIVERSITY RECEIVER



TYPE 110, MODEL 5

Used for dual spaced diversity reception in high speed radio tele-printer, telegraph or telephone service, using any common modulation, such as FS, CW, ICW, phone, etc. Complete receiver is housed in a rack type, fully enclosed cabinet. Provided with specially modified receivers, monitor speaker, IF monitor, master oscillator, and the necessary patching arrangement. Can be supplied with any combination of terminal equipment for reception of radio tele-printer, undulator tape and program service, or for remote use where the intelligence is transmitted via landline or UHF link.

Receiver is shown with terminal equipment as recommended for general communications usage. The units are (top to bottom) Monitor speaker, Receiver #1, Variable Master Oscillator, Receiver #2, Patching Panel, IF Monitor, Converter, Tone Keyer, Blank panels.

FREQUENCY and SHIFT MONITOR SYSTEM

METER: TYPE 127, MODEL 2
MONITOR: TYPE 106, MODEL 4

This system consists of a Type 106 Frequency and Shift Monitor and a Type 127 Frequency Meter. It is designed as a secondary standard to monitor the frequency and amount of shift of transmitter carrier outputs. It is particularly intended to measure the frequency shift of a mark and space (FS) signal either when setting up for traffic or under normal keying conditions.

The Monitor's stability is better than 2 cycles per megacycle over an ambient temperature range of 0-50° C—using crystals having a temperature coefficient of only 3 parts/million/degree C. Range is 2.5-30 mc with 10 crystal-controlled frequencies (separate panel trimmers for each); use of external oscillator also provided for. Frequency Shift range is 10-10,000 cps. Less than 100 millivolts RF input needed for 2 volts audio output.

The Frequency Meter is specially designed with selectable normal and fast-acting damping factors, permitting frequency measurements of signals while keying. Its accuracy is 2% of full scale for the ranges 0-200, 500, 2000, 5000, 20,000 cps.

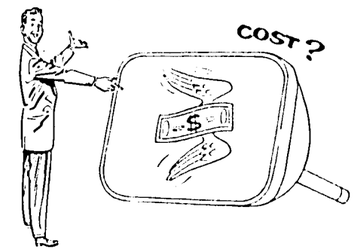
SYLVANIA RADIO and TV TUBES

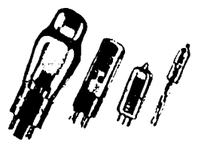
What are your *Aluminized Picture Tubes* Problems?



Now Sylvania offers a full line!

Today, because of greatly increased facilities and improved manufacturing techniques, Sylvania is in a position to offer you perfect answers to your aluminized picture tube problems.

And, much more than your physical spec requirements, Sylvania Aluminized Tubes also offer the finest *performance!* These tubes give whiter whites and blacker blacks . . . a 6-times better picture contrast.



This means Sylvania's new aluminized tubes make your sets stand out ahead of competition. The improvement is obvious . . . and immediate. And the low prices will amaze you!

For the full story concerning Sylvania's complete aluminized tube line, and how they can help your future sales, write a note on your letterhead to Dept. 4R-75, Sylvania Electric Products Inc., 1740 Broadway, New York 19, N. Y.

. . . and for the finest in Receiving Tubes

During more than a quarter of a century, Sylvania Receiving Tubes have earned a world-wide reputation for the finest quality and performance. So remember—for any electronic application, there's a Sylvania Electronic Tube.

Note 1 – Units are matched in the forward direction at 1 volt so that the current flowing through the lower resistance unit is within 10% of that through the higher resistance unit. Ratings are shown for each diode.

Note 2 – Consists of four specially selected and matched diodes whose resistances are balanced within ±2.50% in the forward direction at 1.5 volts. For additional balance, the forward resistance of each varistor pair is matched to within three ohms. Ratings shown are for each diode.

Note 3 – Units are tested in a circuit employing an input of 1.6 volts rms at 40 MC, 75% modulated at 400 cycles. Demodulated output across a 4700 ohm resistor shunted by a 5 $\mu\mu$f capacitor is a minimum of 1.55 volts peak to peak.

Note 4 – Minimum specified reverse resistance applies to all points between 0 and −10 volts with 60 cps sweep.

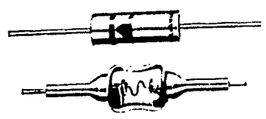
* Indicates JAN type

Note 5 – Consists of four specially selected diodes whose forward currents are matched within a range of 1 ma. with 1 volt applied. Ratings shown are for each diode.

Note 6 – The 1N82, 1N82A, and 1N172 are low noise and low conversion loss UHF television mixer crystals. The noise factor of the 1N82 is 15 db max., that of the 1N82A and the 1N172 is 14 db max. The noise factor is measured at 700 mc with a local oscillator drive (bias current) of 0.5 ma.

Note 7 – Units are tested in a circuit employing a fundamental frequency of 126 MC. The rectified 3rd harmonic output is 0.5 ma. minimum.

Note 8 – Minimum specified reverse resistance applies at 55°C for all points between −10V and −50V with 60 cps sweep.



Note 9 – Reverse recovery time for these units is specified and defined as the time required for the diode to recover to a given reverse current when the operating voltage necessary to give 30 ma. forward conduction is rapidly switched to −35 volts.

Type	Reverse Current μa max	Reverse Resistance ohms min.	Recovery Time μsec max
1N119	700	50K	0.5
	87.5	400K	3.5
1N120	700	50K	0.5
	175	200K	3.5

Note 10 – Units are tested in a circuit employing an input of 0.1 volts rms at 44 MC. Rectified output is a minimum of 140 μa with a 3600 ohm load and 65 uh shunted by 5 $\mu\mu$f capacitor.

Note 11 – Normally supplied with ½" minimum leads but will be supplied without leads for clip-in applications upon request.

The polarity of all Sylvania crystals is indicated by a graphic symbol →|— on the body, the arrow of which indicates the direction of easier (conventional) current flow.

Sylvania Germanium Diodes are long-life, lightweight, heaterless components that have found hundreds of applications in clippers, limiters, discriminators and other circuits calling for low power rectification at frequencies up to several hundred megacycles. They have low shunt capacity and no contact potential. Convenient pigtail leads eliminate the need for mounting hardware.

Sylvania Duo-Diodes consist of two matched diodes mounted in a single unit.

Sylvania Varistors, types 1N40, 1N41 and 1N42, consist of 4 specially selected and matched germanium diodes whose resistances are balanced within ±2.5% in the forward direction at 1.5 volts. Sylvania Varistor Type 1N71 consists of 4 matched low impedance diodes, whose forward currents are within a range of 1 ma. with +1 volt applied.

Ratings shown are for each diode. Types 1N40, 1N42 and 1N71 are plug-in type; 1N41 is lug type.

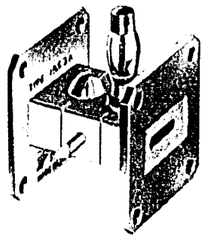
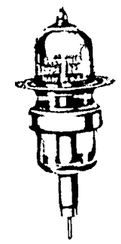
MICROWAVE COMPONENTS and CRYSTALS, Transistors, Photodiodes and Glow Transfer Tubes



6BL6

KLYSTRONS



Sylvania Types 6BL6 and 6BM6 are intended for use as c.w. oscillators. They are of the separate cavity type, with oscillation frequency depending chiefly on external tuning. 6BMA, 5836 and 5837 are suitable for either c.w. or pulsed operation. Write for catalog EC-40B.

TR's and ATR's

Sylvania TR and ATR Tubes are used chiefly as automatic electronic transmit-receive switches in radar equipment. For full data on complete line call your nearest Sylvania Sales office.

1B63A

ROCKET TUBES

Sylvania Rocket Tubes are planar-electrode disc-seal triodes for use as oscillators and amplifiers at frequencies up to 3300 mc. Design permits broad band operation. Tuning is simpler and covers a greater continuous range than that of many other types of uhf tubes.

2C36–is a pulse-modulated oscillator for frequencies up to 1200 mc.

2C37 – is designed for use as a c.w. oscillator up to 3300 mc. Plate disc is flat, grid disc folded.

5764 – is a pulse-modulated oscillator for use up to 3300 mc.

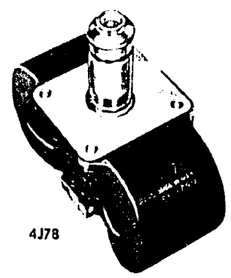
5765–is for use as a c.w. oscillator without external feedback in the range from 900 to 3000 mc.

5767–is a c.w. oscillator for use up to 3300 mc. Both discs are folded.

5768–is intended for use as a c.w. amplifier-multiplier up to 3000 mc.

6018–is intended for use as a c.w. amplifier-multiplier up to 3000 mc.

6BA4–High gain, low noise, UHF television amplifier.

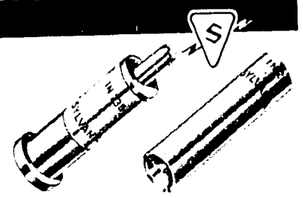


PENCIL TUBES

5794–is intended for use at 1680 mc as a c.w. oscillator.

5876–is intended for use at 1700 mc as a UHF triode for c.w. oscillator, amplifier and frequency multiplier operation.

6263–high mu triode with 11 watts dissipation for use as oscillator or amplifier at 500 mc or frequency multiplier in the range 250-1000 mc.

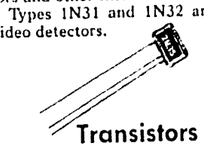


6264–medium mu triode with 11 watts dissipation for use as oscillator or amplifier at 500 mc or frequency multiplier in the range 250-1000 mc.

4J78

MAGNETRONS

The Sylvania family of Magnetrons operates in the shf band at peak power levels ranging from 7 to 300 kw and at average power ranging from 14 to 300 watts. 2J42 and 6027 are of the vane type; 4J50, 4J52 and 4J78, hole and slot. All are supplied with magnet. Write for bulletin EC-37C.



Sylvania Silicon Diodes

1N21B, 1N21C, 1N23B, 1N23C, 1N25, 1N26, 1N53 and 1N78 are used chiefly as first detectors in radar and other microwave superheterodyne receivers.

Type 1N79 is designed for use in microwave test probes, power indicators and other instruments.

Types 1N31 and 1N32 are used as video detectors.

Transistors

Hermetically sealed. Leads can be clipped for plug-in applications.

2N32–Point contact for pulse and switching circuits in large signal medium speed applications.

2N34–PNP Junction general purpose amplifier for high gain, low power, low frequency circuits.

2N35–NPN Junction designed for audio amplifier use.

2N68 – PNP Junction medium gain, high power, output transistor. Provides 3 watts output in push pull Class B amplifier.

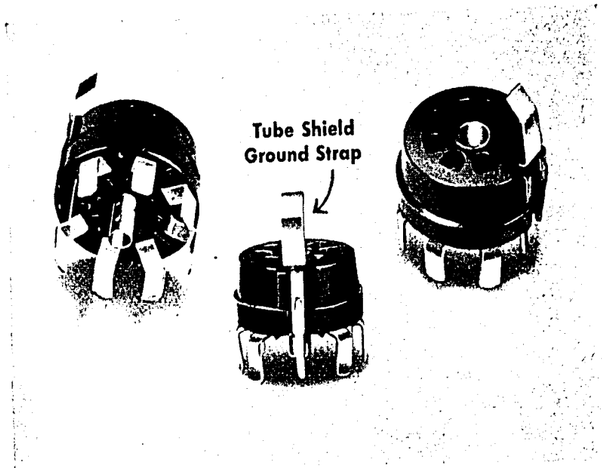
3N21 – Point Contact tetrode for switching and small signal applications.

Glow Transfer Tubes

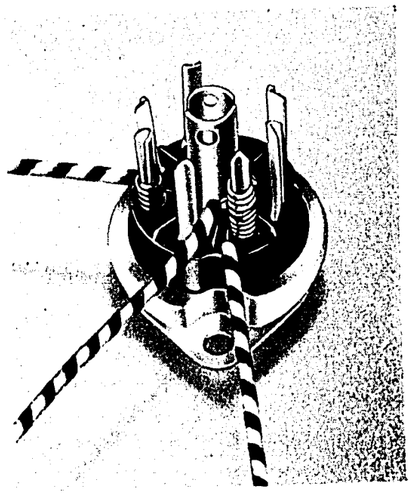
Cold cathode, bi-directional, direct reading decade counter tubes, 350 volt supply.

6476–Multiple output cathode–25 volts output across cathode resistor.

6482–Single output cathode–15 volts output across cathode resistor.



Photodiode 1N77A



Miniature highly sensitive junction photodiode for operation in visible and infra-red regions. Peak sensitivity at 15,000 Angstrom units.

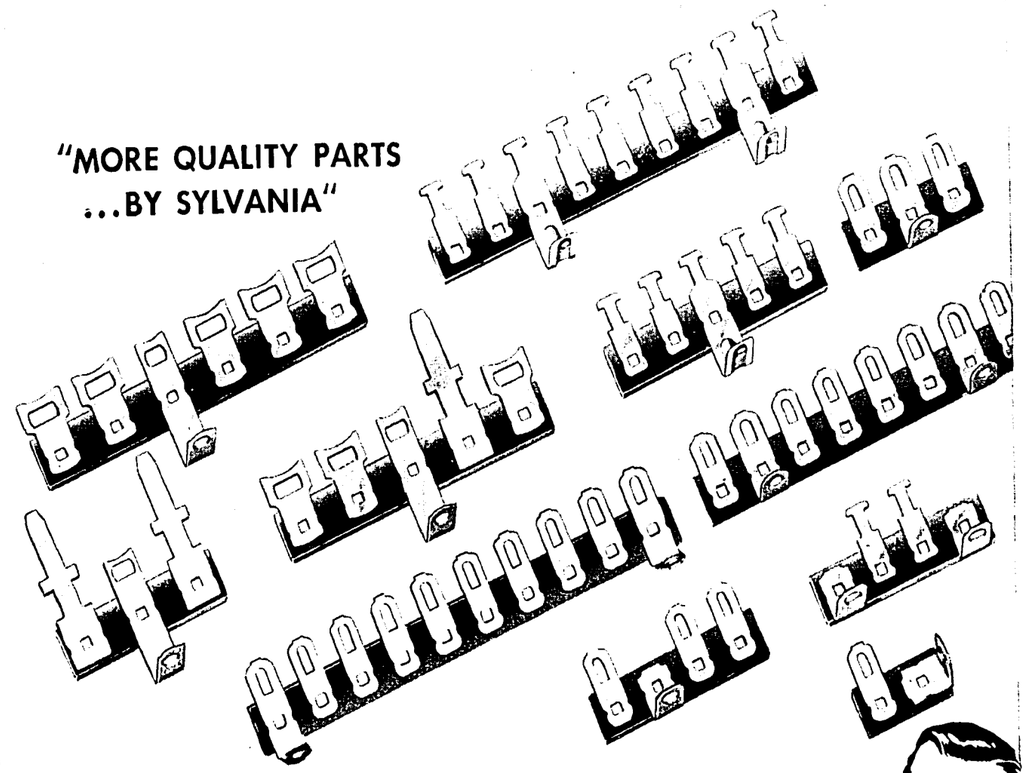
NEW SYLVANIA SOCKETS Save Assembly Time...Cut Costs ...Improve Performance!

Look over these new Sylvania 7-pin Miniature Printed-circuit Sockets. Contacts and center shield are shaped so that sockets can be stacked one upon another for automatic feeding and assembly. Small slots are used on the circuit board to receive the contacts. This results in stronger chassis construction.

Only one socket assembly need be stocked since terminals can be interconnected by printing the circuit on the chassis board rather than using a metallic connecter on the socket itself.

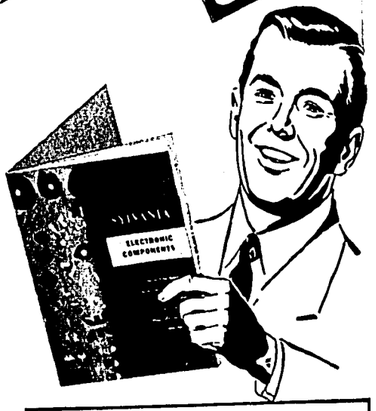


Insulator is molded of general-purpose or low-loss phenolic. Contacts are brass or phosphor bronze, plated to suit your specification. Supplied with or without center shield. Now available in 7-pin construction with 9-pin miniature and other types to follow. Tube Shield Ground Strap can also be furnished.

Also find out about the New Sylvania Solderless-type Sockets for wire-wrapped connections. These are now being made in all 7 and 9-pin miniature sizes. Contacts are shaped to provide reliable connections with the use of present wire-wrapping tools.

For full information concerning these or other Sylvania parts, or special quality components engineered to your own specifications, write to Dept. 4A-75, Sylvania Electric Products Inc., 1740 Broadway, New York 19, N. Y.

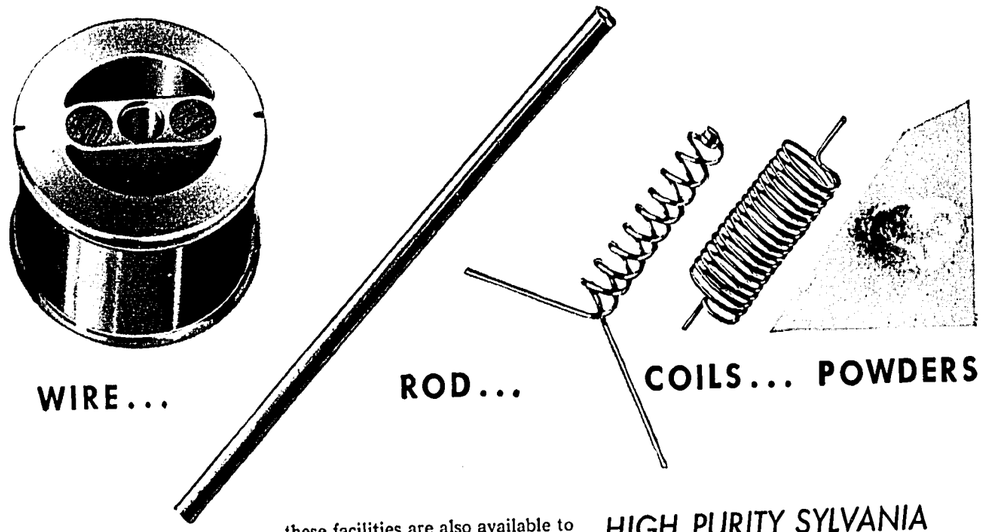
SYLVANIA
LIGHTING • RADIO • ELECTRONICS • TELEVISION



"MORE QUALITY PARTS ...BY SYLVANIA"

Sylvania now offers you a wide variety of highest quality terminal strips . . . equipped with from 2 to 10 lugs . . . depending on style, suitable for many different applications. 3 different styles are available in spacing sizes of ⅜" and ½" spacings. 2 types are available with lugs in 2 to 10 positions. The 3rd type is available with 2 to 7 lugs.

Insulators are made of NEMA grade P laminated phenolic—chocolate waxed, unwaxed or XXX P natural phenolic, waxed or unwaxed. Lugs are of brass, solder plated. Contacts are brass or cadium-plated steel. Sylvania Terminal Strips can be supplied to your specifications.



Today, with enlarged, modern plastic molding equipment and metal stamping facilities, Sylvania offers you precision-built components of highest quality. For new illustrated sheets showing the complete line of Sylvania Terminal Strips and other radio and electronic components now available, write to: Sylvania Electric Products Inc., Dept. 4A-75, 1740 Broadway, New York 19, N. Y.

TUNGSTEN AND CHEMICAL PRODUCTS

WIRE... ROD... COILS... POWDERS

Sylvania Tungsten wire, rod, and components are quality controlled from ore to finished products and tested in the laboratory and in the field. Suppliers to all leading manufacturers in the radio and television industry, Sylvania offers you tungsten and chemical products that meet the highest standards of purity, precision, and uniformity.

Let Sylvania help you

Sylvania maintains large diversified metallurgical and chemical laboratories for the development and perfection of its many products. Today, these facilities are also available to help you. Sylvania engineers, Sylvania "know-how," and Sylvania equipment will aid you in product development or in the solution of tough manufacturing problems.

If it's a question concerning anything . . . from a precision, custom-made tungsten wire to a specially-ground tungsten part, or from a high-purity phosphor to germanium dioxide for your crystals . . . put it up to Sylvania. A note on your letterhead will bring you the information you require. Address: Dept. 4T-75, Sylvania Electric Products Inc., 1740 Broadway, N. Y. 19, N. Y.

SHORT FORM CATALOG

Hewlett-Packard offers over 250 measuring instruments for manufacturing, industrial and scientific research, equipment maintenance, communications and military use.

Each *-hp-* instrument gives you the economies of fast, accurate performance, broad usefulness, and dependable service. Each has the familiar *-hp-* characteristics of simple operation, minimum adjustment, independence of line voltage or tube changes, generous overload protection and highest quality design and construction.

This catalog gives brief details of major *-hp-* instruments. For complete information, see your *-hp-* representative, or write direct.

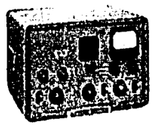
Copyright 1954 Hewlett-Packard Company

-hp- Oscillators — Signal Generators .01 to 10,000,000 cps

-hp- 200 SERIES AUDIO OSCILLATORS

Four widely used *-hp-* oscillators have been redesigned into two compact, lightweight instruments offering wider frequency range, more operating simplicity, highest accuracy and stability. New Models 200AB and 200CD replace Models 200A through 200D, retain the time-tested RC circuits that insure constant output, low distortion; require no zero set. *-hp-* also offers Model 202D for sub-audio, audio, supersonic and carrier tests; and Model 200I, a spread-scale oscillator for interpolation or where frequency must be known precisely.

-hp- 650A TEST OSCILLATOR



Highly stable, wide band (10 cps to 10 mc) multi-purpose test oscillator for audio, supersonic, video, and rf measurements. Output variable 30 μv to 3 v. Frequency response flat ± 1 db. Output impedance 600 ohms, or 6 ohms with voltage divider. $490.00△.

Instrument	Primary Uses	Frequency Range	Output	Price
-hp- 200AB	Audio tests	20 cps to 40 kc	1 watt/24.5 v	$120.00
-hp- 200CD	Audio, ultrasonic tests	5 cps to 600 kc	160 mw/20 v *	150.00
-hp- 200I	Interpolation and frequency measurements	6 cps to 6 kc	100 mw/10 v	225.00
-hp- 200T	Telemetry, carrier current tests	250 cps to 100 kc	160 mw/20 v *	350.00
-hp- 201B	High quality audio tests	20 cps to 20 kc	3 w/42.5 v	250.00
-hp- 202A	Low frequency measurements	.01 cps to 1 kc	20 mw/10 v	465.00△
-hp- 202B	Low frequency measurements	½ cps to 50 kc	100 mw/10 v	365.00△
-hp- 202D	Low frequency measurements	2 cps to 70 kc	100 mw/10 v	275.00
-hp- 204A	Portable, battery operated	2 cps to 20 kc	2.5 mw/5 v	175.00
-hp- 205A	High power audio tests	20 cps to 20 kc	5 watts	405.00△
-hp- 205AG	High power tests, gain measurements	20 cps to 20 kc	5 watts	440.00△
-hp- 205AH	High power supersonic tests	1 kc to 100 kc	5 watts	565.00△
-hp- 206A	High quality, high accuracy audio tests	20 cps to 20 kc	+15 dbm	565.00△
-hp- 230A	Carrier test oscillator	35 cps to 35 kc	+14 dbm/600 ohms	275.00
-hp- 233A	Carrier test oscillator	50 cps to 500 kc	3w/600 ohms	475.00
-hp- 234A	Carrier test oscillator	160 cps to 160 kc	+14 dbm/600 ohms	300.00
-hp- 650A	Wide range video tests	10 cps to 10 mc	15 mw/3 v	490.00△

*Open circuit. Internal impedance 600 ohms.

-hp- Distortion, Wave Form Analyzers — 20 cps to 20 kc

-hp- 330B DISTORTION ANALYZER

Measures distortion as low as 0.1%, 20 cps to 20 kc. Measures noise voltages as low as 100 μv. High sensitivity, high stability, broad applicability for broadcast, laboratory or production. Wide band 20 db gain input amplifier. Built-in VTVM usable separately. $410.00△.

FM, AM-FM MODELS

-hp- 330C, for FM broadcasters, includes VU meter meeting F.C.C. requirements. *-hp- 330D,* for AM-FM broadcasters, includes AM detector to rectify AM carrier, plus VU meter employed in model 330C. Model 330C, $440.00△. Model 330D, $455.00△.

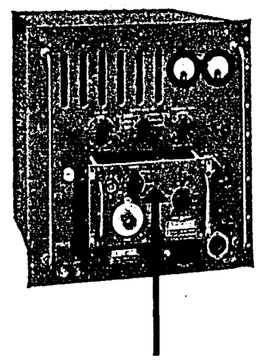
Instrument	Primary Uses	Frequency Range	Characteristics	Price
-hp- 300A	Wave form analyzer	30 cps to 16 kc	Variable selectivity; measuring range 1 mv to 500 v	$625.00
-hp- 330B	Measures total audio distortion	20 cps to 20 kc	Includes input amplifier, VTVM	410.00△
-hp- 330C	For FM broadcast measurements	20 cps to 20 kc	Special VU meter to meet F.C.C. requirements	440.00△
-hp- 330D	For AM-FM broadcast measurements	20 cps to 20 kc	AM detector and VU meter to meet F.C.C. requirements	455.00△
SQUARE WAVE GENERATOR				
-hp- 210A	Transient and frequency response	20 cps to 10 kc	Output 50 v peak-to-peak 1,000 ohm impedance	150.00

-hp- Vacuum Tube Voltmeters — 2 to 700,000,000 cps

-hp- 400D VACUUM TUBE VOLTMETER

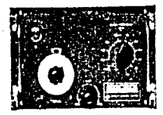
Best *-hp-* voltmeter ever built! Covers all frequencies 10 cps to 4 mc. Extremely sensitive, wide range, accurate within 2% to 1 mc, measures 0.1 mv to 300 v. Direct reading in dbm. 10 megohm input impedance insures negligible loading on circuits under test. New amplifier circuit with 56 db mid-range feedback assures utmost stability, freedom from change due to external conditions. $225.00.

Instrument	Primary Uses	Frequency Range	Voltage Range	Input Impedance	Price
-hp- 400A	General purpose ac measurements	10 cps to 1 mc	.005 to 300 v 9 ranges	1 megohm 24 μμfd shunt	$185.00
-hp- 400B	Low frequency ac measurements	2 cps to 100 kc	.005 to 300 v 9 ranges	10 megohms 24 μμfd shunt	195.00
-hp- 400D	Wide range ac measurements. High sensitivity	10 cps to 4 mc	.0001 to 300 v 12 ranges	10 megohms 14 μμfd shunt	225.00
-hp- 404A	Portable, battery operated	2 cps to 50 kc	.0005 to 300 v 11 ranges	10 megohms 20 μμfd shunt	185.00
-hp- 410B	Audio, rf, VHF measurements; dc voltages; resistances	20 cps to 700 mc	.1 to 300 v 7 ranges	10 megohms 1.5 μμfd shunt	245.00



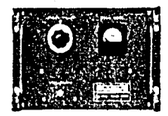
-hp- Voltmeter Accessories (not listed) include voltage dividers, connectors, shunts and multipliers to extend the useful range of your equipment.

△ Includes new lightweight all-metal cabinet with carrying handles. Also available for rack mounting at slightly lower prices.

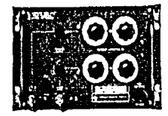


Data subject to change without notice. Prices f.o.b. factory.

NEW! 524B ELECTRONIC COUNTER



with plug-in units to fit your exact measuring need



-hp- 524B Counter with -hp- 525A Frequency Converter

-hp- 525B Frequency Converter

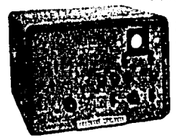
-hp- 526A Video Amplifier

-hp- 526B Time Interval Unit

Frequency 10 cps to 220 mc, interval 1 μsec to 100 days and period 0 cps to 10 kc—all are measured instantly, automatically, directly by the revolutionary new *-hp-* 524B. You buy just the instrumentation you need; later add inexpensive plug-in units to double, triple versatility of this complete coverage instrument. Operation requires no calculations or technical training. Counter has high impedance, sensitivity, accuracy, quality construction. $1,915.00△.

-hp- 525A Frequency Converter extends Counter's basic 10 cps to 10 mc range to 100 mc; increases video sensitivity to 0.1 v, 10 cps to 10 mc. $225.00.

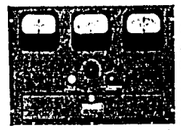
-hp- 525B Frequency Converter gives Counter range from 100 to 220 mc at 0.25 v sensitivity. $225.00.



-hp- 526A Video Amplifier increases Counter's sensitivity between 10 cps and 10 mc to 10 millivolts for low level work. $125.00.

-hp- 526B Time Interval Unit measures interval 1 μsec to 100 days with accuracy of 0.1 μsec ± 0.001%. Reads direct in seconds, milliseconds, microseconds. $150.00

(Plug-in units supplied in aluminum storage cases)



Other -hp- Frequency Measuring and Monitoring Equipment

-hp- 100D SECONDARY FREQUENCY STANDARD

Swift, sure frequency comparison, new convenience in standardizing with minimum external equipment. 100 μsec time markers, built-in oscilloscope, sine or rectangular waves. Low output impedance; short-time stability 1/1,000,000. Performs most functions of primary standards in audio, rf or supersonic ranges. $615.00△.

-hp- 335E TV MONITOR

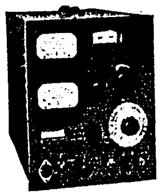
Channels 2 through 83. Exceeds F.C.C. requirements. Compact, only 12¼" high, rack mounted. Low cost, all purpose, for visual and aural frequency monitoring, percentage aural modulation. Long-term dependability, precise accuracy, highest stability, no adjustment during operation. Forced ventilation, remote indication features. $1,950.00.

-hp- 512A/B FREQUENCY CONVERTERS

Two new *-hp-* Frequency Converters extend range of *-hp-* 524A Electronic Counter without loss of accuracy and with increased sensitivity. *-hp-* 512A covers frequencies 10 to 100 mc, 512B covers 100 to 220 mc. Complex setups eliminated, are easily used by non-technical personnel. *-hp-* 512A, 512B, $350.00.

-hp- 522B ELECTRONIC COUNTER

Compact, low cost, versatile instrument for frequency, period *or* time measurements. Range 10 cps to 100 kc. Reads direct in cps, kc, seconds or milliseconds. Count automatically reset, action repetitive. Stability of time base 5/1,000,000. Display length variable. Easily used by untrained personnel. $915.00△.



Instrument	Primary Uses	Frequency Range	Characteristics	Price
-hp- 100C Secondary Standard	Audio, supersonic calibration	100 kc, 10 kc, 1 kc, 100 cps	Accurate within ± .001% Sine waves only	$ 465.00△
-hp- 100D Secondary Standard	Frequency, time measurements	100 kc, 10 kc, 1 kc, 100 cps, 10 cps	Stability 1/1,000,000 (short-time) Sine or rectangular output. Marker pips	615.00△
-hp- 335B Frequency Monitor	FM broadcast station monitor	88 to 108 mc	Frequency deviation ± 3 kc; accuracy ± .001%; modulation 0 to 100 kc	935.00
-hp- 335E TV Monitor	TV visual, aural and % mod. monitor	Channels 2 through 83	Indicates visual, aural carrier frequency deviation, % modulation aural carrier	1,950.00
-hp- 500A Frequency Meter	Rapid frequency measurements	10 cps to 50 kc	10 ranges ± 2% accuracy. Input 0.5 to 200 volts	210.00
-hp- 505A Electronic Tachometer	Measurements of high speed machinery	600 to 3,000,000 rpm	10 ranges ± 2% accuracy	220.00
-hp- 505B Electronic Tachometer	Same as 505A	10 to 50,000 rps	Same as 505A except calibrated in rps	220.00
-hp- 510A Mixer	Measure frequency continuously with -hp- 500A and 100 D/C	20 cps to 200,000 cps	Mixes two frequencies, delivers difference to -hp- 500A	200.00
-hp- 512A Frequency Converter	Extends -hp- 524A range to 100 mc	100 kc to 100 mc	Fast, direct readings of signals to 100 mc with 524A. No charts, interpolation. Min. input 0.01 v	350.00
-hp- 512B Frequency Converter	Gives -hp- 524A range 100 to 220 mc	100 mc to 220 mc	Same as 512A except for frequency coverage and input 0.14 v RMS min.	350.00
-hp- 520A Nuclear Scaler	For counting high-rate pulses	Capacity 100 counts in 2 decades. 10,000,000 pps counting rate	100:1 divider for operation of low speed scalers	615.00△
-hp- 522A Electronic Counter	Wide-range frequency, period measurements	10 cps to 100 kc	Frequency measuring gate time is 1 sec. or multiples; standard frequency counted for period measurement 100 kc	790.00△
-hp- 522B Electronic Counter	Wide-range frequency, period, time interval measurements	10 cps to 100 kc	Measures rate of occurrences 0.00001 to 100,000/sec.; time interval 10 μsec to 27.8 hrs.; periods of frequency count 1/1,000, 1/100, 1/10, 1, 10 sec. and multiples. Direct readings in cps, kc, sec. and millisec.	915.00△

△ Includes new lightweight all-metal cabinet with carrying handles. Also available for rack mounting at slightly lower prices.

Data subject to change without notice. Prices f.o.b. factory.

-hp- Signal Generators—10 to 11,000 mc

-hp- 612A UHF-TV SIGNAL GENERATOR

450 to 1,200 mc. Master oscillator-power amplifier generator for UHF-TV measurements including gain, selectivity, sensitivity, image rejection. Directly set and read; no charts, no interpolation. Low incidental fm, high-quality broad band video modulation to 5 mc. May be modulated internally or externally, amplitude modulated or pulse modulated. (Good rf pulses 0.2 μsec or longer.) $1,200.00.

Instrument	Frequency Range	Characteristics	Price
-hp- 608A	10 to 500 mc	Output 0.1 μv to 1 v into 50 ohm load. Pulse or CW modulation. Direct calibration.	$ 850.00
-hp- 612A	450 to 1,200 mc	Output 0.1 μv to 0.5 v into 50 ohm load. Pulse, CW or amplitude modulation to 5 mc. Direct calibration.	1,200.00
-hp- 614A	800 to 2,100 mc	Output 0.1 μv to 0.223 v into 50 ohm load. Pulse, CW or FM modulation. Direct calibration.	1,950.00
-hp- 616A	1,800 to 4,000 mc	Output 0.1 μv to 0.223 v into 50 ohm load. Pulse, CW or FM modulation. Direct calibration.	1,950.00
-hp- 618B	3,800 to 7,600 mc	Output 0.1 μv to 0.223 v into 50 ohm load. Pulse, CW, FM or square wave modulation. Direct calibration.	2,250.00
-hp- 620A	7,000 to 11,000 mc	Output 0.1 μv to 0.071 v into 50 ohm load. Pulse, CW, FM or square wave modulation. Direct calibration.	2,250.00
-hp- 623B	5,925 to 7,725 mc	Output 70 μv to 0.223 v into 50 ohm load. FM or square wave modulation. Separate power meter and wave meter section.	1,750.00
-hp- 624B	8,500 to 10,000 mc	Output 3.0 μv to 0.223 v into 50 ohm load. Pulse, FM or square wave modulation. Separate power meter and wave meter section.	2,265.00△

-hp- Waveguide Test Equipment—2.6 to 18 kmc

Basic, low-cost elements offer utmost flexibility for assembly of exact instrumentation required. Each unit covers entire range of its waveguide size. Simple, sturdy mechanical design; accurate, multi-purpose operation.

Instrument	Coaxial Type N Conn.	"S" 3" x 1½" 2.6–3.95 kmc.	"G" 2" x 1" 3.95–5.85 kmc.	"J" 1½" x ¾" 5.85–8.2 kmc.	"H" 1¼" x ⅝" 7.05–10.0 kmc.	"X" 1" x ½" 8.2–12.4 kmc.	"P" .702" x .391" 12.4–18.0 kmc.
Adapter, Waveguide to Coax		S281A $75.00	G281A $55.00	J281A $50.00	H281A $45.00	X281A $35.00

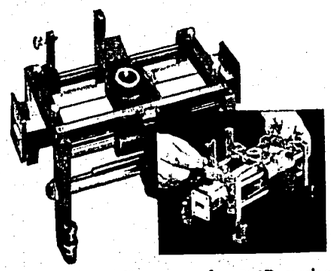
-hp- Regulated Power Supplies

-hp- 715A POWER SUPPLY

-hp- 715A is a versatile source of regulated beam and reflector voltage for operating most test bench klystron tubes. Beam voltage 250 to 400 v; reflector voltage 0 to 900 v; 6.3 v filament. Internal, 1,000 cps square wave modulation, also 60 cps fm modulation, both on reflector voltage. $300.00.

-hp- 712B POWER SUPPLY

This new *-hp-* instrument features high regulation of 0.01%, 0.1 millisecond transient response, internal impedance 0.1 ohms in series with 25 μH; full-load maximum hum less than 500 μv, sealed transformers, chokes and condensers. 0 to 500 v, 200 ma supply and fixed—300 v tap providing a 50 ma, 300 to 800 v variable supply for klystron operation. $365.00△.



Instrument	Primary Uses	Characteristics	Price
-hp- 710A Power Supply	General purpose regulated plate and filament supply for lab and field use	180 to 360 volts at 75 milliamperes	$ 85.00
-hp- 710B Power Supply	Same as 710A	100 to 360 volts at 75 milliamperes	100.00
-hp- 712B Power Supply	Similar to 710A/B. Meets requirements for heavy duty field and lab work	0 to 500 volts at 200 milliamperes 0.01% regulation	365.00△
-hp- 715A Klystron Power Supply	Regulated beam, reflector source for low power klystrons	250 to 400 volts at 50 milliamperes	300.00
-hp- 717A Klystron Power Supply	Regulated beam, reflector source for Type 5721 klystrons	800 to 1,000 volts at 25 milliamperes	375.00

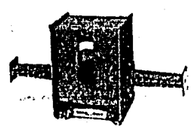
Equipment below available for most waveguide frequencies

See table at left for data, prices.

-hp- 809B UNIVERSAL PROBE CARRIAGE

-hp- 810 WAVEGUIDE SLOTTED SECTIONS

Convenient, all-purpose *-hp-* 809B carriage operates with six different *-hp-* slotted sections, waveguide and coaxial. Mounts sections covering frequencies 3,000 to 18,000 mc—*sections interchange in 30 seconds!* Precision-built carriage calibrated in mm to 0.1 mm; dial gauge may be mounted. Operates with *-hp-* 442B Broad Band Probe and *-hp-* 440A Coaxial Detector in combination; or with *-hp-* 444A Untuned Probe.



-hp- 810A/B Slotted Sections. -hp- 810B, for mounting in 809B carriage, is a flanged waveguide section with accurately machined slot tapered at ends to minimize reflection. Available in 5 waveguide bands, 3.95 thru 18.0 kmc. *-hp-* S810A, complete slotted section assembly including probe carriage. Available for 2.6 to 3.95 kmc band only.

-hp- 420A CRYSTAL DETECTOR

Employs a silicon crystal to detect rf signals in Type N coaxial line. Covers frequencies 10 mc to 12.5 kmc. Flat frequency response, excellent conversion efficiency. Uses modified 1N21 crystal.

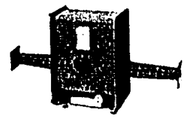
-hp- X382A PRECISION ATTENUATOR

Precision broad band attenuation to 50 db. Completely independent of frequency; phase shift constant all attenuations. Calibrated range 0 to 50 db, maximum error ± 2% of db reading. 8,200 to 12,400 mc. VSWR less than 1.15 full range. Radical new design with rotating attenuator films.

-hp- 281A WAVEGUIDE-COAX ADAPTERS

For convenient transition between waveguide and coax systems. Each unit covers a full waveguide range with VSWR less than 1.25. Equipped with Type N connectors.

-hp- 444A UNTUNED PROBE

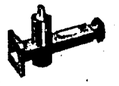


A 1N26 crystal plus small antenna in a convenient, easy-to-use housing. Variable penetration depth, no tuning required. Sensitivity equal to single- or double-tuned probes. Frequency range: 2.6 to 18.0 kmc. Mounts in 809B Carriage.

-hp- 487A THERMISTOR MOUNT

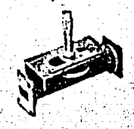
For fast, accurate waveguide power measurements. Each mount covers full range of its waveguide frequency. No tuning required, VSWR less than 1.5. Rugged construction, high temperature coefficient permanent thermistors virtually eliminate delays due to detector element burn-out.

-hp- X885A PHASE SHIFTER



For accurate, precisely controlled phase variation throughout X-Band frequencies. Ideal for microwave impedance, transmission measurements, antenna and system design. Direct reading, low power absorption, 360° (electrical) range.

-hp- 752 MULTI-HOLE COUPLER



Directional couplers available in 2 models with coupling factors of 10 and 20 db ± 0.7 db over full range of a waveguide. VSWR better than 1.05. Directivity 40 db or better over entire range. Available as a 3-terminal network.

-hp- 485B DETECTOR MOUNTS

To measure power over complete waveguide range in conjunction with *-hp-* 430B Power Meter and barretter. Also measures relative level, or detects rf energy using 1N21 or 1N23 crystal. Semi-tuned by movable short to VSWR 1.25.

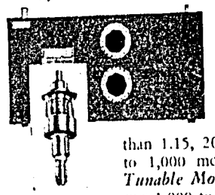
-hp- 870A SLIDE SCREW TUNERS

For flattening waveguide systems. The position and penetration of a probe is adjusted to set up a VSWR which is used to cancel existing VSWR in system. VSWR values up to 20 can be corrected with accuracy of 1.02 VSWR.

△ *Includes new lightweight all-metal cabinet with carrying handles. Also available for rack mounting at slightly lower prices.*

Data subject to change without notice. Prices f.o.b. factory.

Microwave Power Measuring Equipment



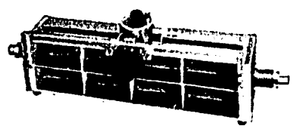
-hp- 430B MICROWAVE POWER METER

No computations! Provides instantaneous, automatic power readings *direct* in db or mw at all frequencies for which there are suitable bolometer mounts. For CW measurements, uses either 1/100 amp. fuse or Sperry 821 barretter. Also measures CW or pulsed power with negative coefficient thermistor. Operates with all mounts in adjacent table. $250.00.

Instrument	Primary Uses	Frequency Range	Characteristics	Price
-hp- 430B Microwave Power Meter	Measurement of rf power	Depends on Bolometer mount	.01 to 10 mw ± 5% accuracy	$250.00
-hp- 475B Tunable Bolometer Mount	Measurement of rf power	1,000 to 4,000 mc	Matches 50-ohm line to 100 or 200 ohms	200.00
-hp- 476A Universal Bolometer Mount	Measurement of rf power	10 to 1,000 mc	No tuning required VSWR less than 1.25	85.00
-hp- 477A Coaxial Thermistor Mount	Measurement of rf power	10 to 10,000 mc	Broad band, low VSWR, no tuning	75.00
-hp- 485 Waveguide Detector Mount	Measurement of rf power	2,600 to 18,000 mc	Full coverage of waveguide band	See Table page 4
-hp- 487A Waveguide Thermistor Mount	Measurement of rf power	4,000 to 12,000 mc	Full coverage, no tuning, 1.5 VSWR	See Table page 4

-hp- 475B/476A BOLOMETER MOUNTS

-hp- 476A Universal Bolometer Mount measures rf power 10 to 1,000 mc. No tuning or adjustment. VSWR less than 1.15, 20 to 500 mc; 1.25, 10 to 1,000 mc. $85.00. *-hp- 475B Tunable Mount* (upper), continuous 1,000 to 4,000 mc. $200.00.



-hp- 477A COAXIAL THERMISTOR MOUNT

For frequency range 10 mc to 10 kmc. VSWR less than 1.5. Thermistor element is 200 ohm negative. Input connector type N, output Type BNC. $75.00.

Microwave Impedance Measuring Equipment

-hp- 805A/B COAXIAL SLOTTED SECTION

Range 500 to 4,000 mc. High accuracy, high stability, negligible slope, minimum leakage. Exclusive parallel plane design, VSWR of basic section and connectors, 1.04. *-hp-* 805A, 50 ohms, Type N coaxial connector. *-hp-* 805B, 46.3 ohms, for 7/8" rigid transmission lines. $475.00.

-hp- 806B COAXIAL SLOTTED SECTION

For continuous coverage at all frequencies from 3,000 to 12,000 mc. For use with *-hp-* 809B carriage. Section and connector VSWR 1.04 to 8,000 mc. 50 ohm impedance, negligible slope. Type N connectors, $200.00.

Instrument	Primary Uses	Frequency Range	Characteristics	Price
-hp- 360A-D Low Pass Filters	Eliminates harmonic voltages from UHF systems	Cutoff frequencies A-700 mc B-1,200 mc C-2,200 mc D-4,100 mc	50 db rejection at 1.2 cutoff freq.	$ 40.00
-hp- 415A Standing Wave Indicator	VSWR indicator or null indicator	300 to 2,000 cps Normal freq. 1,000 cps	0 to 60 db. attn. Max. sensitivity 0.3 μv	200.00
-hp- 416A Ratio Meter	Measure reflection coefficient, VSWR	1,000 cps ± 40 cps	Min. 3 millivolts or 0.3 μv; accuracy ±2%	365.00△
-hp- 417A VHF Detector	VHF bridge detector (for -hp- 803A)	10 to 500 mc	Approx. 5μv sensitivity	250.00
-hp- 803A VHF Bridge	Measurement of VHF impedance, VSWR	50 to 500 mc	2 to 2,000 ohms impedance — 90° to + 90° phase angle	495.00
-hp- 805A Coaxial Slotted Section	Measurement of VSWR	500 to 4,000 mc	For Type N Connectors, flexible cables	475.00
-hp- 805B Coaxial Slotted Section	Same as above	Same as above	For rigid 7/8" RG44/U line	475.00
-hp- 806B Coaxial Slotted Section	Same as above (Mounts in 809B)	3,000 to 12,000 mc	For Type N Connectors, flexible cables	200.00
hp- 809B Universal Probe Carriage	Supports 806B section, also G, J, H, X and P 810 Waveguide sections		Accepts 442B and 444A probes	160.00

-hp- 803A VHF BRIDGE

Gives fast, direct readings of any impedance between 50 and 500 mc. Measures by sampling electric and magnetic fields in transmission line. Usable for comparative measurements 5 to 700 mc. Impedance range 2 to 2,000 ohms. Phase angle —90° to + 90°, at 52 mc and above. Also measures SWR, % reflected power, VHF system flatness. $495.00.

-hp- 417A VHF DETECTOR

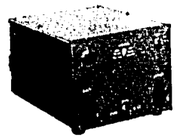
For use with 803A Bridge; or general laboratory use. Super-regenerative receiver, 10 to 500 mc. 5 bands. Approx. 5 μv sensitivity over entire band. Direct reading frequency control, thoroughly shielded. $250.00.

-hp- 415A STANDING WAVE INDICATOR

For all wavguide or coaxial slotted sections. Gives readings in VSWR or db. Single frequency operation; 300 to 2,000 cps. Low noise level, 0.3 μv sensitivity, 60 db. calib. attenuator. $200.00.

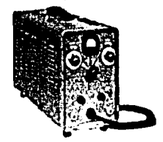
△ *Includes new lightweight all-metal cabinet with carrying handles. Also available for rack mounting at slightly lower prices.*

Data subject to change without notice. Prices f.o.b. factory.



Amplifiers for General Use and Fast-Circuit Work

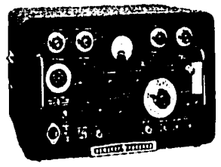
-hp- 460A/B AMPLIFIERS



Complete instrumentation for distortion-free fast pulse measurement. *-hp- 460A Wide Band Amplifiers*, in cascade with *-hp- 460B Fast-Pulse Amplifiers* offer up to 90 db gain, 125 v open circuit output. This permits full deflection of 5XP CRT, or 2-inch deflection of 5CP tubes. Rise time 0.0026 μsec; can amplify milli-microsecond pulses; gives over 100 mc bandwidth to your standard oscilloscope. 460A, $185.00; 460B, $225.00. Connecting cables, plugs, accessories—prices on request.

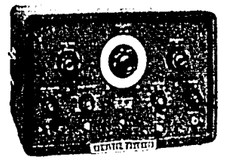
Instrument	Primary Uses	Frequency Range	Characteristics	Price
-hp- 450A Amplifier	General purpose lab amplifier	5 to 1,000,000 cps	20 and 40 db gain freq. response + ½ db	$ 140.00
-hp- 460A Amplifier	Wide band, pulse amplification	100 kc to 140 mc	20 db gain, rise time 0.0026 μsec.	185.00
-hp- 460B Amplifier	Pulse amplification, high output	100 kc to 140 mc	15 db gain, 125 peak volts	225.00
-hp- 490A Traveling-Wave Tube Amplifier	Amplification and pulse modulation	S-Band—2 to 4 kmc	High gain, low noise, broad band 35 db gain	1,100.00
-hp- 491A Traveling-Wave Tube Amplifier	Power gain to 1 watt	S-Band—2 to 4 kmc	30 db gain	1,100.00

-hp- 450A AMPLIFIER



Time-tested, general purpose instrument, 20 db or 40 db gain, for use wherever wide frequency range and high stability are needed. 10 cps to 1 mc. Negligible phase shift, no spurious responses. $140.00.

-hp- 490A/491A TRAVELING-WAVE TUBE AMPLIFIERS

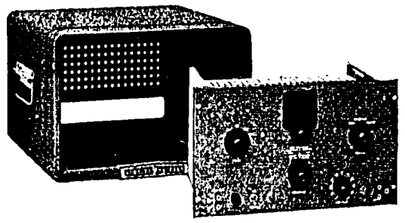


Two new broad band linear instruments providing a new, simple way to amplify, modulate, or increase power to 1 watt. Full S-Band coverage—2 to 4 kmc; 30 and 35 db gain, millimicrosecond pulse modulation, radical new coupled-helix design. High gain, low noise. *-hp-* 490A, $1,100.00. *-hp-* 491A, $1,100.00 (Includes capsulated tube).

-hp- 624B X-BAND TEST SET

High level, direct reading, *portable* test set simplifies lab or field work at frequencies from 8,500 to 10,000 mc. Rf output .223 v max. High stability attenuator reduces level by 100 db. May be pulsed or fm modulated. Separate section measures external rf power or external frequency. Ideal one-piece unit for measuring sensitivity and selectivity, tuning and power level of radar, gunfire and beacon systems. $2,265.00△.

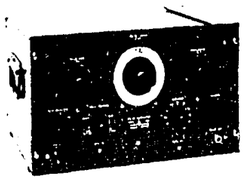
-hp- 212A PULSE GENERATOR



Provides continuously variable, high power "fast pulses" of superior wave form. Combines broad general usefulness with 0.02 μsec rise and decay time to meet requirements of radar, TV and nuclear work. Pulse length variable 0.07 to 10 μsec; minimum overshoot; 50 watt peak power (50 v to 50 ohms load). Low impedance means accurate pulses can be delivered at a distance from the instrument. Repetition rate variable 50 to 5,000 pps; controlled internally or externally. Synchronizing pulses available in advance of, or following, output pulse. $565.00△.

New Streamlined All-Metal -hp- Cabinets

3 mounting options, greater flexibility of use



Now you can buy *-hp-* instruments mounted any of three ways, and, later on, change to any other mounting you wish. This new versatility means greater utilization of your *-hp-* instruments, and can also increase the flexibility of your entire instrument setup.

Cabinets. *-hp-* instruments having the standard 10½" x 19" panel are now available in standardized *-hp-* AC 44 aluminum-and-steel cabinets. Equipped with sturdy carrying handles, these cabinets give

your *-hp-* instruments greater protection, better ventilation, and a clean, rugged, modern appearance. Either the separate back cover or the cabinet itself can be removed quickly and easily. Cabinets are finished in wrinkle grey matching the *-hp-* grey baked enamel panel faces. Cabinet, with instrument, $15.00; separately, $25.00.

End frames. To increase flexibility and convenience of *-hp-* instruments for bench use, *-hp-* Model 17 End Frames are offered. These frames are of heavy gauge aluminum, equipped with sturdy carrying handles and finished in *-hp-* grey baked enamel. They fit all late model *-hp-* instruments with panel size 10½" x 19", and may be attached in moments. *-hp-* 17 End Frames, $7.50 set.

Rack mounting. Many *-hp-* instruments are basically rack mounting and can be installed directly into 19" relay racks. Many other *-hp-* instruments can be equipped for relay rack mounting at slight additional charge. A complete list of instruments available for rack mounting will be sent on request.

Smaller *-hp-* instruments, too, are now being delivered in new, streamlined cabinets. *-hp-* 512A/B Frequency Converter, illustrated, shows the rugged, lightweight metal cabinet now offered with such instruments as *-hp-* 200AB, 200CD, 410B and 715A.

△ *Includes new lightweight all-metal cabinet with carrying handles. Also available for rack mounting at slightly lower prices.*

Data subject to change without notice. Prices f.o.b. factory.

complete coverage

In electronic test instruments, Hewlett-Packard gives you complete coverage several different ways.

In development -*hp*- engineer teams are continually at work designing and producing accurate, helpful new instruments that meet and anticipate the demands of electronics.

In instrumentation the -*hp*- line is the world's largest and most complete. You choose from over 250 instruments the ones that provide exactly the measuring coverage you require.

In frequency coverage -*hp*- makes nearly every kind of useful electronic test instrument. And, for almost all useful frequencies, too. For example, -*hp*- signal generators offer solid frequency coverage from 10 to 11,000 mc; -*hp*- voltmeters from 2 to 700,000,000 cps, oscillators from 0.01 to 10,000,000 cps.

In personal service— -*hp*- has selected the best independent organizations in America to give you personal help with measuring problems. Electronics specialists—men trained by Hewlett-Packard—save you time by helping select the exact -*hp*- instrumentation you need—and following through to be sure the equipment is properly utilized to serve you best. These men are located in major business centers—as near as your telephone. Call them when you need personal help, — in your plant, today.

SPERRY GYROSCOPE COMPANY

SPERRY KLYSTRON TUBES and *Microline*† INSTRUMENTS

Stemming from its sponsorship of the development of the klystron in 1938, Sperry has had vast experience in the manufacture of these tubes for low, medium and high power applications. As a result of Sperry's pioneering in microwave measuring techniques, this company has a complete line of *Microline* instruments which include every type of device essential to precision measurement, in the entire microwave field.

For further information on the equipment listed below or on new development of klystrons and microwave test units, write or telephone our Special Electronics Department or our nearest District Office.

KLYSTRONS

Type	Description	Frequency Range in MC	Output Power	Beam Voltage	Reflector Voltage
SRL17	Reflex Oscillator	750 to 990	5w	1000	0 to -1500
3K23	Reflex Oscillator	950 to 1150	5w	1000	0 to -1500
SRL7C	Reflex Oscillator	1850 to 2350	10w	1000	0 to -1000

JENNINGS RADIO MANUFACTURING CORPORATION · 970 McLAUGHLIN AVE. P.O. BOX 1278 · SAN JOSE 8, CALIFORNIA

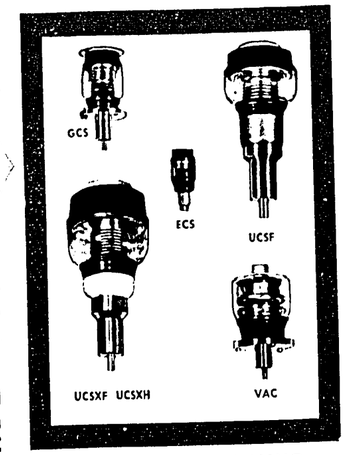
Jennings RADIO
VACUUM ELECTRONIC COMPONENTS

JENNINGS VACUUM CAPACITORS
ADDED DURING THE PAST YEAR
TO PROVIDE WIDER CAPACITY RANGES AND HIGHER POWER RATINGS

LOW POWER CAPACITORS

The JCSL fixed and the UCSL variable series rated at 2 to 5 KV now include fixed capacities of 100, 250, 500, 750, 1000, 1500, and 2000 mmfd as well as variable capacity ranges of 4 - 250, 4 - 500, 5 - 750, 7 - 1000, and 20 - 2000 mmfd.



MEDIUM POWER CAPACITORS

More plates have been added to the UCS and UCSX series to give wider capacity ranges with the same movement. At a voltage rating of 10 KV, we now have the UCSF 5 - 250 and 12 - 500 mmfd as well as the UCSXF 7 - 1000, 20 - 1500, 25 - 2000, and 50 - 2500 mmfd.

At the same voltage rating of 10 KV, we also have added two small variables—the ECS 3 - 30, and the GCS 5 - 100 mmfd.

Finally, in the medium power field we have developed a non-linear tuning capacitor designed specifically for amateur service—the VAC 4 - 40 mmfd rated at 42 amperes rms at 10 KV.

HIGH POWER CAPACITORS

More plates have also been added to the UCSXH to create a new unit similar to the UCSXF shown above. The new UCSXH is rated at 35 KV and has a capacity range of 20 - 500 mmfd.

The capacity ranges of the VMMC and the VMMHC have been increased in the same way to give us the VMMC 100 - 5000 mmfd rated at 5 to 10 KV (and 100 amperes) and the VMMHC 60 - 1000 mmfd rated at 35 to 45 KV. Two new fixed capacitors using the same plates will also soon be available. These are the MMC 5000 mmfd rated at 5 to 10 KV and the MMHC 1000 mmfd rated at 35 KV.

VACUUM SWITCHES AND RELAYS Of the switches shown on the preceding pages, the R-8, RM-2, RM-4, and RC-2 switches and relays have been added during the past year.

JENNINGS RADIO MANUFACTURING CORPORATION • 970 McLAUGHLIN AVE. P.O. BOX 1278 • SAN JOSE 8, CALIFORNIA

GUDEMAN

CAPACITORS

Paper-dielectric, plastic-film dielectric, metalized paper, dry electrolytic and ceramic capacitors are manufactured for commercial and military use. Among these types are high-temperature miniature paper-dielectric capacitors to meet the requirements of Specification MIL-C-25A. Other types manufactured are high-voltage paper-dielectric glass-cased capacitors, paper-dielectric capacitors in cardboard tubing, dry electrolytic capacitors in metallic or cardboard case, plastic-film dielectric capacitors in rectangular case and disc-type ceramic capacitors. Special capacitors are also designed and manufactured to meet individual requirements.

NOISE SUPPRESSION FILTERS

Low-pass, high-pass and band-pass filters are designed and manufactured to meet specifications for military and commercial applications. In addition, R-F Interference Filters for screen-booth application to handle high current with negligible voltage drop are manufactured.

PULSE TRANSFORMERS

Miniature pulse transformers are designed and manufactured to meet individual requirements for high-temperature applications. They are hermetically sealed in either metallic containers or encapsulated in epoxy resin. Metallic case types are furnished with either pig-tail or plug-in terminals. Encapsulated resin types are made with pig-tail terminals only.

DELAY LINES

Fixed, continuously variable, and decade delay lines are designed with either lumped or distributed parameters for operation over temperature ranges of — 65°C to + 125°C. Gudeman delay lines possess low attenuation and low coefficient of thermal delay. Encased in fibre tubing, hermetically sealed containers, or encapsulated in epoxy resin.

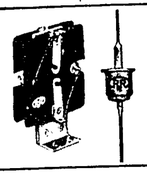
POINT CONTACT DIODES



The interior of the RRCo. Diodes is vacuum filled with a flexible wax material which is chemically and electrically inert. Because of this the diode is excellently protected against the effects of moisture and contamination from the surrounding air.

TRANSISTORS

Types RR14, RR20, RR34, 2N34, 2N36, 2N37 and 2N38 intended for applications in low level audio circuits. Particularly applicable where small size and economy of operation are desirable.

Type RR21 intended for applications in low level audio circuits requiring power outputs in the 10 milliwatt range.

Type RR38 intended for applications requiring economy of operation at low power levels. Particularly applicable as the output stage for hearing aids and personal receivers.

Type RR66, photo transistor.

Types RR83 and RR87 intended for service in switching applications such as flip-flop, multivibrator and pulse circuits.

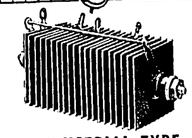
Our engineers will be glad to offer suggestions regarding your Germanium Diode and Transistor applications without obligation. For further information write for the following bulletins:

PG16A – Replacement Guide.
PG24 – Computer Diodes.
PG23 – General Diodes & PNP Transistors.
PG25 – Diffused Junction Power Diodes.
PG26 – 1N110 Measuring Technique.
PG27 – Photo Transistor.

NOTE:
The art of manufacturing germanium products is constantly changing as new methods and techniques are developed. New products and variations of the old are continuously added to our line. Write us requesting the latest information.



Really Reliable

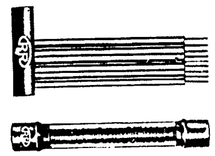
Selenium Rectifiers

Really Reliable

INDUSTRIAL TYPE RECTIFIERS

These have proved reliable through years of service in various voltage and current combinations up to several hundred kilowatts. Useful for a multitude of applications: power supplies, magnetic amplifiers, electroplating, battery charging, etc.

HALF-WAVE RADIO TYPE RECTIFIERS

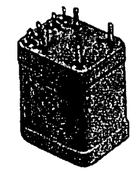


These stacks can meet the needs of many small power applications as for instance, relay operation. Millions are in use in radio and TV. Available for black and white as well as color TV in ratings up to 750 MA.

EMBEDDED RECTIFIERS

For adequate protection in military and other stringent uses. Recommended for use where size and weight are important considerations such as in aircraft applications.

CARTRIDGE ASSEMBLES



. . . From tiny, single cell diodes to several thousand volts. Phenolic or glass encased, wide range of half-wave, bridge and center tap types.

HIGH TEMPERATURE TYPES

These selenium rectifiers are capable of operating in an ambient temperature of 125°C. with no increase in the size of the cell as compared with a similar rectifier operating in a normal ambient.

HERMETICALLY SEALED UNITS

Built to special requirements to meet unusually severe conditions. Designed to meet individual needs.

RECTIFIERS FOR MAGNETIC AMPLIFIERS

Designs will be submitted to meet individual requirements.

Our engineering department will be glad to aid you in the solution of your rectifier problems. Submit your requirements and let us make recommendations . . . without obligation, of course! See our catalog in Sweet's Product Design file.

For additional information write for the following bulletins:

P-177—Listing Industrial and Half-wave Radio Types.
P-172—Selenium Diodes.
P-178—Cartridge assemblies.

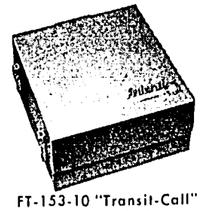
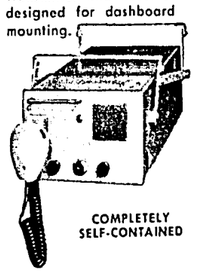
Federal's MOBILE RADIO COMMUNICATION EQUIPMENT for INDUSTRIAL USE



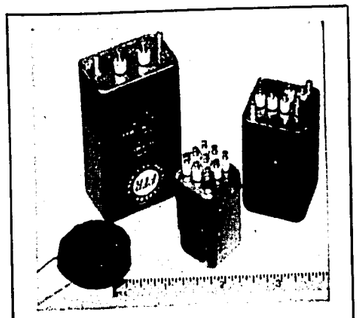
FT-153-A-10CZ
TRANSMITTER RECEIVER

134 A
CONTROL UNIT



FT-153-A-10CZ Fixed-Station equipment designed for office desk installation, with telephone-type control.

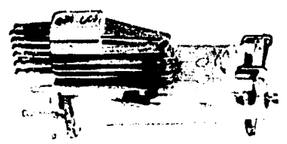
Improve plant operations with Federal Mobile Radio equipment. More efficient dispatch of fork-lift trucks, cranes, yard trucks to jobs within and around factory buildings. Easy to install —Low in cost—Dependable operation. Three types of equipment available with RF power output of 10 watts at 162 Mc.



FT-153-10 "Transit-Call" Transmitter and Receiver for standard mounting. Total weight is under 29 pounds.

FT-156 "Transit-Call" Transmitter and Receiver designed for dashboard mounting.

COMPLETELY SELF-CONTAINED



MINIATURE TRANSFORMERS

Miniature Hermetically Sealed input, output and inter-stage Audio Transformers, featuring Federal's new hermetically sealed terminal. Hermetically sealed power transformers and chokes. Meets government specifications.

TELEPHONE TYPE RELAYS

Telephone type relays available with a wide variety of contact combinations and ratings. Single and double coil combinations are available with coil resistances ranging from a few ohms to several thousand ohms.

DELAY LINES and PULSE TRANSFORMERS

Delay Lines:

The new Federal Delay Lines are of the lumped constant type. They are compact, lightweight, efficient and meet military requirements. They are hermetically sealed against dust, dirt and moisture.

RANGE OF DELAY.....0.3 to 45 microseconds
IMPEDANCE RANGE.....100 to 10,000 ohms
MINIMUM RISE TIME.....0.5 microseconds

Pulse Transformers:

Of miniaturized construction, compact and efficient. Meet government specifications and are hermetically sealed.

DUTY CYCLE.....1 maximum PULSE WIDTH.....5 to 7.0 microseconds
RISE TIME.....05 microseconds minimum

FILTERS

Various filters are available including high-pass, low-pass and band-pass for audio and carrier type applications. Meet commercial and military specifications. Hermetically sealed against dust, dirt and moisture. Use toroidal type high Q coils.

TOROIDS

With high Q performance they are self shielding and available in hermetically sealed cases, encapsulated, or unsealed and to meet military requirements.

POWER TRANSFORMERS

Hermetically sealed, compact, rugged and high quality types to meet commercial and military specifications. Meet Class A, B or H temperature requirements. Also available in lightweight, high temperature, 400 cycle aircraft type.

FEDERAL TRANSFORMERS ARE DESIGNED AND BUILT TO MEET CUSTOMER SPECIFICATIONS.

MINIATURE ANTI-CAPACITY SWITCHING KEY

For airborne and other equipment—whenever compactness and light weight are prime factors. A miniature, light-weight design with 8 "Break-Make" contacts. Two groups of 12 contact springs each are actuated by a molded phenolic drive roller with a simple motion of the lever. Both sides are non-locking. Contact springs are molded into units of 4 springs each, formed and pre-tensioned which will reduce adjusting of springs after assembly to a minimum. The complete spring pileup consists of 6 interlocking molded blocks, mounted into frame with a screw. Meets military requirements.

"SINGLE-CRYSTAL-STABILIZED" GERMANIUM DIODES *Featuring* HERMETICALLY-SEALED CONSTRUCTION

Designed to be built into compact modern electronic equipment. Even under adverse conditions it will insure long life and the ultimate in reliable performance.

These Types Available:

Federal — RADIO-TV SELENIUM RECTIFIERS

The revolutionary circuit elements that have led the way to important design advances in TELEVISION & RADIO RECEIVERS & ELECTRONIC EQUIPMENT

Wherever DC power is required there is a Federal Radio-TV Selenium Rectifier to do the job... and do it with an efficiency and reliability that is backed by the outstanding reputation of Federal—America's oldest and largest manufacturer of Selenium Rectifiers.

*These rectifiers have two sections—characteristics given apply to one section only; if both sections are used in series, voltage input is 320 volts.

†The characteristics given for this rectifier are based on its use in a half-wave rectifier circuit with a 3-cell battery load.

‡The characteristics given for this rectifier are based on its use in a full-wave rectifier circuit with a 3-cell battery load.

•'A' after code number indicates locking lug.

FEDERAL'S RADIO-TV SELENIUM RECTIFIER HANDBOOK

80 pages of valuable designs, characteristics and application. Available for 50 cents (coin only).

SELENIUM RECTIFIER EQUIPMENTS

QUALITY-BUILT

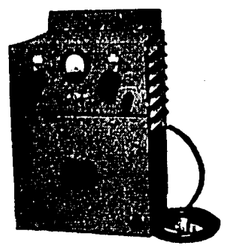
MAGNETIC AMPLIFIERS

Powered by Quality Controlled

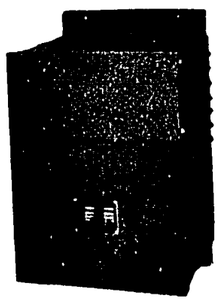
Federal

SELENIUM RECTIFIERS

Presently used in a wide range of successful applications for industry and the Armed Forces, such as:



- Voltage Control
- Temperature Control
- Current Control
- Photoelectric Control
- Speed Control
- Counting
- Position Control
- Automatic Regulation



Federal Selenium Rectifiers, in partnership with the right magnetic components, provide Magnetic Amplifiers outstanding for:

Stability • Accuracy • Long Life
High Gain • Fast Response
Low-cost Operation

Submit your magnetic amplifier requirements to Federal—write to Dept. F-4104

POWER SUPPLIES: Designed to furnish a dependable and constant source of D-C power. Whether for industrial or laboratory use, these equipments are available in sizes to serve your requirements. For industrial requirements they are used to power magnetic equipment such as chucks, brakes, clutches, screens, separators, drums and pulleys, and also provide power for lifting magnets, relays, circuit-breakers and D-C motors.

SELENIUM RECTIFIERS *for Industrial Service* From AC to DC . . . Millowatts to Kilowatts

Low-cost power conversion . . . efficient, dependable . . . from a-c to d-c. Introducing new, broad range adaptability in diverse fields, conditions and applications. They obtain direct current from any alternating current source. They are small, light, easy to install. They meet all needs of an unattended service.

FOR COMPLETE DATA Write for Federal's Data Booklet on Selenium Rectifiers. An informative guide to characteristics and applications of the industry's most comprehensive line of high quality rectifiers. Address Dept. F-4104.

The FEDERAL System of ENCAPSULATION

Federal's method of encapsulating selenium rectifiers and allied components presents an entirely new approach to civilian and military equipment design — particularly where environmental or other unusual conditions necessitate special applications. It is now possible to assemble transformers, capacitors, resistors and other components—interconnected—into single blocks of equipment. Such assembly facilitates the replacement of individual as well as entire groups of components without the necessity of time-consuming repairs. Assures excellent thermal shock characteristics and resistance to vibration and cracking of the sealed unit over wide temperature ranges. Embedments withstand low temperatures to −65°C, as well as high temperatures to plus 125°C. Send for Bulletin F-534 for complete details.

FEDERAL CONTACT PROTECTOR

Federal's Contact Protectors are a sure way to longer life for relay contacts, eliminating circuit failure and interference caused by arcing.

1. Suppresses contact arcing
2. Extends Contact Life by more than 1000 times
3. Reduces circuit failure due to contact erosion (locking, surging, etc.)
4. Minimizes RF Interference
5. Has negligible effect on speed of operation of circuit
6. Needs no attention
7. Is easily installed
8. Requires little space
9. Is low in cost
10. Available as hermetically sealed unit to meet all JAN specifications.

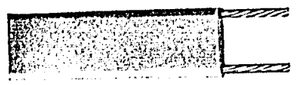
FEDERAL VARIETY OF CABLE TYPES

Federal's cable department produces a variety of H-F cable types. Some of these cables are produced by Federal *exclusively*. All are made to the most exacting standards of quality and control. The materials used are the finest research has developed, assuring top electrical characteristics. Initial dimensional precision helps to maintain stability over a wide temperature range.

SOLID DIELECTRIC COAXIAL CABLES

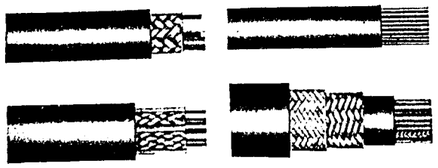
consist of a solid or stranded inner conductor, dielectric material, one or two copper wire braids, a synthetic resin protective jacket and, in some cases, a protective armor or metal braid. Dual coaxial cables are similar in design to the solid dielectric types, except that two accurately-spaced inner conductors are used.



LOW-CAPACITANCE COAXIAL AIR-SPACED CABLES

have a construction similar to that of the solid dielectric types, except that air is made a portion of the dielectric. One method of accomplishing this effect and still maintaining a high dielectric strength is through a construction involving an inner conductor in a thin-walled dielectric tube. This is achieved by means of a dielectric thread wound in a long spiral.

SPIRAL DELAY, HIGH IMPEDANCE LINES



There are four types available with delays of 1 microsecond per foot; .2 microsecond per foot; .1 microsecond per foot and .042 microsecond per foot. 1 microsecond per foot delay line is ideal for color TV use.

TELEVISION ANTENNA LEAD-IN WIRE

consists of two accurately-spaced conductors over which is extruded the dielectric material. These lead-in wires have no braid, jacket or armor except in special cases. The advances in television have meant ever-new approaches to the design of TV lead-in to the point where it has taken many varied forms, the latest being the tubular shaped "pipeline" lead-in.

SPECIAL CABLE PROBLEMS

Federal Telephone and Radio Corp. maintains a stock of most of the required types. When requirements are so special that they cannot be met by Federal's cable types, Federal research and engineering facilities are readily available to develop any new cable constructions. Charges are based on quantity. Special Orders — like all Federal production — are executed under the high standards maintained by Federal "Quality Control." Every length of cable is carefully checked to see that it meets *all* tests indicated for the type ordered. Toughness, heat resistance, moisture resistance, dielectric strength, cold-bend — these are just a few of the many tests that must be passed before approval for shipment is given. Federal's consulting service is yours for the asking.

Federal also manufactures many types of plastic-insulated wires and multi-conductor cables for television, intercom and numerous special purposes.

COMMUNITY TV COAXIAL CABLE

FEDERAL'S "BIG 5"—The answer to any Community TV Lead-in problem . . . Engineered for long life, low line loss and DEPENDABLE all-weather signal transmission . . . over the longest link. Federal's K-14, RG-11/U and RG-59/U are the H-F coaxials you can specify with utmost confidence . . . for community TV Distributing Systems in any area . . . for any amplifier system used.

Wherever the annoying, profit-eating problems of signal leakage and revenue loss exist, the answer is Federal's new K-125 and K-126 *non-radiating* alternates for RG-11/U and RG-59/U—used in conjunction with Federal's K-14 — the primary lead-ins famous for lowest line loss, long cable runs and fewer amplifiers required. Both K-125 and K-126 are *double-shielded* and *double-jacketed*.

All of the "BIG 5" are made to Federal's high standards of quality — and that means *dependable, all-weather transmission performance!*

Principal characteristics of Federal's "BIG 5" of Community TV

TYPE	ZO Impedance Ohms	Capacitance per ft. micro-micro farads	ATTENUATION DB per 100 Feet 50Mc	100Mc	200Mc	400Mc	Jacket OD Mils (Max.)	Weight per 1000 Ft. (lbs.)

An Original Development by Federal

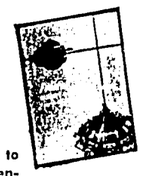
RG TYPE CABLES

WITH THE NEW LOW-TEMPERATURE NON-CONTAMINATING THERMOPLASTIC JACKET

Federal is supplying low temperature non-contaminating jackets on all cable types which now call for it and will also supply such compounds for specific cables to meet customers' requirements. The low temperature, non-contaminating jacket was an original Federal development.

The new RG types are outstanding for their longer service life under the most adverse conditions. Their non-contaminating feature means there is no reduction in dielectric strength due to molecular migration.

New HR* WIRES



14 to 24 AWG

High impact strength, resists thermal shock. Impervious to the action of corrosive chemicals and highly resistant to most organic solvents. Water absorption is nil therefore the corona formations and surface flash-over are minimized. Low cold flow. Covers a wide temperature range (—55°C—150°C) to cover any application for hook-up wire. Also can be used at lower temperatures and higher temperatures for short periods.

TEFLON INSULATED WIRE and CABLES

Your inquiries are invited on these new Federal wires and cables.

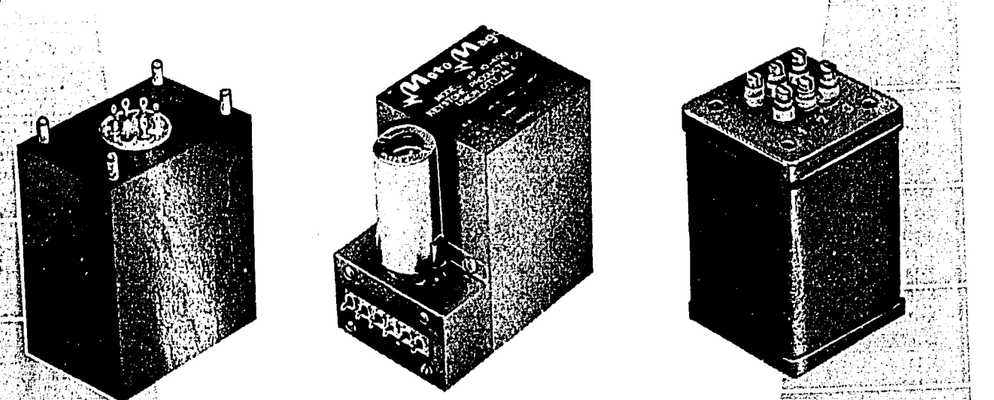
problems?



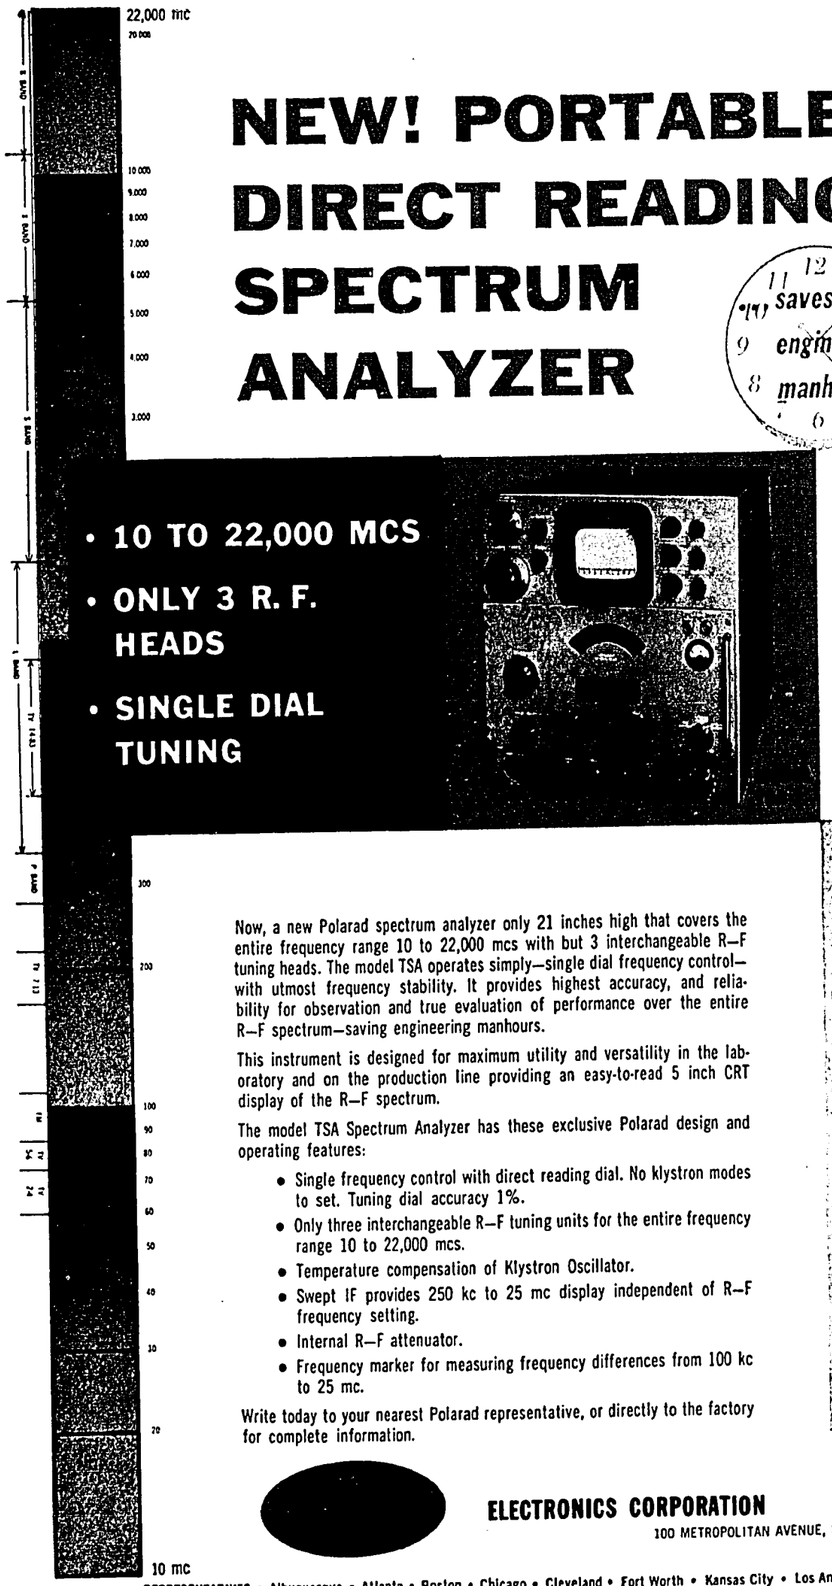
let KEYSTONE custom-engineer the most effective solution

When just an ordinary transformer or magnetic amplifier won't do, call on KEYSTONE — a leading producer of custom-engineered equipment to meet unusually difficult specifications.

Standard or subminiature transformers available to provide unique electronic accuracy, special quality, lower weight, or other critical factors.

New KEYSTONE "Moto Mag" pre-designed magnetic amplifiers lick problems before they get started — save precious engineering time. By utilizing these pre-engineered "Moto Mags" in servos, computers, remote control devices, and other variable phase power units you'll save planning headaches and production dollars.

We'll be glad to demonstrate how "Moto Mags" can work effectively for you.



Write, wire or phone for additional details, technical information and quotes — now!

NEW! PORTABLE DIRECT READING SPECTRUM ANALYZER

saves 9 engineering manhours

- 10 TO 22,000 MCS
- ONLY 3 R. F. HEADS
- SINGLE DIAL TUNING

Now, a new Polarad spectrum analyzer only 21 inches high that covers the entire frequency range 10 to 22,000 mcs with but 3 interchangeable R—F tuning heads. The model TSA operates simply—single dial frequency control—with utmost frequency stability. It provides highest accuracy, and reliability for observation and true evaluation of performance over the entire R—F spectrum—saving engineering manhours.

This instrument is designed for maximum utility and versatility in the laboratory and on the production line providing an easy-to-read 5 inch CRT display of the R—F spectrum.

The model TSA Spectrum Analyzer has these exclusive Polarad design and operating features:

- Single frequency control with direct reading dial. No klystron modes to set. Tuning dial accuracy 1%.
- Only three interchangeable R—F tuning units for the entire frequency range 10 to 22,000 mcs.
- Temperature compensation of Klystron Oscillator.
- Swept IF provides 250 kc to 25 mc display independent of R—F frequency setting.
- Internal R—F attenuator.
- Frequency marker for measuring frequency differences from 100 kc to 25 mc.

Write today to your nearest Polarad representative, or directly to the factory for complete information.

Model No.	Equipment
Model TSA	Spectrum Display and Power Supply
Model STU-1	R-F Tuning Unit 10-1,000 mc.
Model STU-2	R-F Tuning Unit 910-4,560 mc.
Model STU-3	R-F Tuning Unit 4,370-22,000 mc.

SPECIFICATIONS:

Frequency Range: 10 mc to 22,000 mc

Frequency Accuracy: 1%

Resolution: 20 kc

Frequency Dispersion: Electronically controlled, continuously adjustable from 50 kc/in. to 7 mc/in.

Input Impedance: 50 ohms

Over-all Gain: 120 db

Attenuation: RF....Internal: 120 db continuously variable IF....60 db continuously variable

Input Power: 400 watts

FEDERAL VARIETY OF CABLE TYPES

Federal's cable department produces a variety of H-F cable types. Some of these cables are produced by Federal exclusively. All are made to the most exacting standards of quality and control. The materials used are the finest research has developed, assuring top electrical characteristics. Initial dimensional precision helps to maintain stability over a wide temperature range.

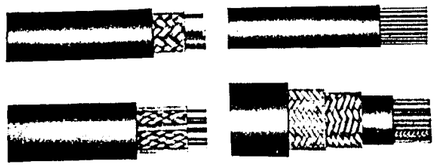
SOLID DIELECTRIC COAXIAL CABLES

consist of a solid or stranded inner conductor, dielectric material, one or two copper wire braids, a synthetic resin protective jacket and, in some cases, a protective armor or metal braid. Dual coaxial cables are similar in design to the solid dielectric types, except that two accurately-spaced inner conductors are used.

LOW-CAPACITANCE COAXIAL AIR-SPACED CABLES

have a construction similar to that of the solid dielectric types, except that air is made a portion of the dielectric. One method of accomplishing this effect and still maintaining a high dielectric strength is through a construction involving an inner conductor in a thin-walled dielectric tube. This is achieved by means of a dielectric thread wound in a long spiral.

SPIRAL DELAY, HIGH IMPEDANCE LINES



There are four types available with delays of 1 microsecond per foot; .2 microsecond per foot; .1 microsecond per foot and .042 microsecond per foot. 1 microsecond per foot delay line is ideal for color TV use.

TELEVISION ANTENNA LEAD-IN WIRE

consists of two accurately-spaced conductors over which is extruded the dielectric material. These lead-in wires have no braid, jacket or armor except in special cases. The advances in television have meant ever-new approaches to the design of TV lead-in to the point where it has taken many varied forms, the latest being the tubular shaped "pipeline" lead-in.

SPECIAL CABLE PROBLEMS

Federal Telephone and Radio Corp. maintains a stock of most of the required types. When requirements are so special that they cannot be met by Federal's cable types, Federal research and engineering facilities are readily available to develop any new cable constructions. Charges are based on quantity. Special Orders — like all Federal production — are executed under the high standards maintained by Federal "Quality Control." Every length of cable is carefully checked to see that it meets *all* tests indicated for the type ordered. Toughness, heat resistance, moisture resistance, dielectric strength, cold-bend — these are just a few of the many tests that must be passed before approval for shipment is given. Federal's consulting service is yours for the asking.

Federal also manufactures many types of plastic-insulated wires and multi-conductor cables for television, intercom and numerous special purposes.

COMMUNITY TV COAXIAL CABLE

FEDERAL'S "BIG 5"—The answer to any Community TV Lead-in problem . . . Engineered for long life, low line loss and DEPENDABLE all-weather signal transmission . . . over the longest link. Federal's K-14, RG-11/U and RG-59/U are the H-F coaxials you can specify with utmost confidence . . . for community TV Distributing Systems in any area . . . for any amplifier system used.

Wherever the annoying, profit-eating problems of signal leakage and revenue loss exist, the answer is Federal's new K-125 and K-126 *non-radiating* alternates for RG-11/U and RG-59/U—used in conjunction with Federal's K-14 — the primary lead-ins famous for lowest line loss, long cable runs and fewer amplifiers required. Both K-125 and K-126 are *double-shielded* and *double-jacketed*.

All of the "BIG 5" are made to Federal's high standards of quality — and that means *dependable, all-weather transmission performance!*

An Original Development by Federal

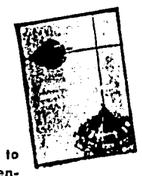
RG TYPE CABLES

WITH THE NEW LOW-TEMPERATURE NON-CONTAMINATING THERMOPLASTIC JACKET

Federal is supplying low temperature non-contaminating jackets on all cable types which now call for it and will also supply such compounds for specific cables to meet customers' requirements. The low temperature, non-contaminating jacket was an original Federal development.

The new RG types are outstanding for their longer service life under the most adverse conditions. Their non-contaminating feature means there is no reduction in dielectric strength due to molecular migration.

New HR* WIRES



14 to 24 AWG

High impact strength, resists thermal shock. Impervious to the action of corrosive chemicals and highly resistant to most organic solvents. Water absorption is nil therefore the corona formations and surface flash-over are minimized. Low cold flow. Covers a wide temperature range (—55°C—150°C) to cover any application for hook-up wire. Also can be used at lower temperatures and higher temperatures for short periods.

TEFLON INSULATED WIRE and CABLES

Your inquiries are invited on these new Federal wires and cables.

*Heat Resistant

Federal — RADIO-TV SELENIUM RECTIFIERS

The revolutionary circuit elements that have led the way to important design advances in TELEVISION & RADIO RECEIVERS & ELECTRONIC EQUIPMENT

Wherever DC power is required there is a Federal Radio-TV Selenium Rectifier to do the job... and do it with an efficiency and reliability that is backed by the outstanding reputation of Federal—America's oldest and largest manufacturer of Selenium Rectifiers.

*These rectifiers have two sections—characteristics given apply to one section only; if both sections are used in series, voltage input is 320 volts.

†The characteristics given for this rectifier are based on its use in a half-wave rectifier circuit with a 3-cell battery load.

‡The characteristics given for this rectifier are based on its use in a full-wave rectifier circuit with a 3-cell battery load.

•'A' after code number indicates locking lug.

FEDERAL'S RADIO-TV SELENIUM RECTIFIER HANDBOOK

80 pages of valuable designs, characteristics and application. Available for 50 cents (coin only).

SELENIUM RECTIFIER EQUIPMENTS

QUALITY-BUILT

MAGNETIC AMPLIFIERS

Powered by Quality Controlled

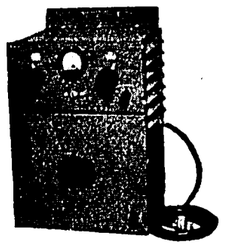
Federal

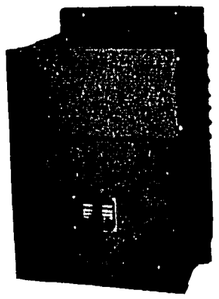
SELENIUM RECTIFIERS

Presently used in a wide range of successful applications for industry and the Armed Forces, such as:

- Voltage Control
- Temperature Control
- Current Control
- Photoelectric Control
- Speed Control
- Counting
- Position Control
- Automatic Regulation

Federal Selenium Rectifiers, in partnership with the right magnetic components, provide Magnetic Amplifiers outstanding for:





Stability • Accuracy • Long Life
High Gain • Fast Response
Low-cost Operation

Submit your magnetic amplifier requirements to Federal—write to Dept. F-4104

POWER SUPPLIES: Designed to furnish a dependable and constant source of D-C power. Whether for industrial or laboratory use, these equipments are available in sizes to serve your requirements. For industrial requirements they are used to power magnetic equipment such as chucks, brakes, clutches, screens, separators, drums and pulleys, and also provide power for lifting magnets, relays, circuit-breakers and D-C motors.

SELENIUM RECTIFIERS *for Industrial Service* From AC to DC . . . Millowatts to Kilowatts

Low-cost power conversion . . . efficient, dependable . . . from a-c to d-c. Introducing new, broad range adaptability in diverse fields, conditions and applications. They obtain direct current from any alternating current source. They are small, light, easy to install. They meet all needs of an unattended service.

FOR COMPLETE DATA Write for Federal's Data Booklet on Selenium Rectifiers. An informative guide to characteristics and applications of the industry's most comprehensive line of high quality rectifiers. Address Dept. F-4104.

The FEDERAL System of ENCAPSULATION

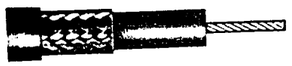
Federal's method of encapsulating selenium rectifiers and allied components presents an entirely new approach to civilian and military equipment design — particularly where environmental or other unusual conditions necessitate special applications. It is now possible to assemble transformers, capacitors, resistors and other components—interconnected—into single blocks of equipment. Such assembly facilitates the replacement of individual as well as entire groups of components without the necessity of time-consuming repairs. Assures excellent thermal shock characteristics and resistance to vibration and cracking of the sealed unit over wide temperature ranges. Embedments withstand low temperatures to −65°C, as well as high temperatures to plus 125°C. Send for Bulletin F-534 for complete details.

FEDERAL CONTACT PROTECTOR

Federal's Contact Protectors are a sure way to longer life for relay contacts, eliminating circuit failure and interference caused by arcing.

1. Suppresses contact arcing
2. Extends Contact Life by more than 1000 times
3. Reduces circuit failure due to contact erosion (locking, surging, etc.)
4. Minimizes RF Interference
5. Has negligible effect on speed of operation of circuit
6. Needs no attention
7. Is easily installed
8. Requires little space
9. Is low in cost
10. Available as hermetically sealed unit to meet all JAN specifications.

Federal Telephone and Radio Company



A Division of INTERNATIONAL TELEPHONE AND TELEGRAPH CORPORATION

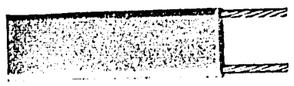
Export Distributors: International Standard Electric Corp., 67 Broad St., N. Y.

FEDERAL VARIETY OF CABLE TYPES

Federal's cable department produces a variety of H-F cable types. Some of these cables are produced by Federal exclusively. All are made to the most exacting standards of quality and control. The materials used are the finest research has developed, assuring top electrical characteristics. Initial dimensional precision helps to maintain stability over a wide temperature range.

SOLID DIELECTRIC COAXIAL CABLES

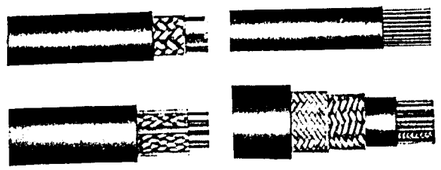
consist of a solid or stranded inner conductor, dielectric material, one or two copper wire braids, a synthetic resin protective jacket and, in some cases, a protective armor or metal braid. Dual coaxial cables are similar in design to the solid dielectric types, except that two accurately-spaced inner conductors are used.



LOW-CAPACITANCE COAXIAL AIR-SPACED CABLES

have a construction similar to that of the solid dielectric types, except that air is made a portion of the dielectric. One method of accomplishing this effect and still maintaining a high dielectric strength is through a construction involving an inner conductor in a thin-walled dielectric tube. This is achieved by means of a dielectric thread wound in a long spiral.

SPIRAL DELAY, HIGH IMPEDANCE LINES



There are four types available with delays of 1 microsecond per foot; .2 microsecond per foot; .1 microsecond per foot and .042 microsecond per foot. 1 microsecond per foot delay line is ideal for color TV use.

TELEVISION ANTENNA LEAD-IN WIRE

consists of two accurately-spaced conductors over which is extruded the dielectric material. These lead-in wires have no braid, jacket or armor except in special cases. The advances in television have meant ever-new approaches to the design of TV lead-in to the point where it has taken many varied forms, the latest being the tubular shaped "pipeline" lead-in.

SPECIAL CABLE PROBLEMS

Federal Telephone and Radio Corp. maintains a stock of most of the required types. When requirements are so special that they cannot be met by Federal's cable types, Federal research and engineering facilities are readily available to develop any new cable constructions. Charges are based on quantity. Special Orders — like all Federal production — are executed under the high standards maintained by Federal "Quality Control." Every length of cable is carefully checked to see that it meets *all* tests indicated for the type ordered. Toughness, heat resistance, moisture resistance, dielectric strength, cold-bend — these are just a few of the many tests that must be passed before approval for shipment is given. Federal's consulting service is yours for the asking.

Federal also manufactures many types of plastic-insulated wires and multi-conductor cables for television, intercom and numerous special purposes.

COMMUNITY TV COAXIAL CABLE

FEDERAL'S "BIG 5"—The answer to any Community TV Lead-in problem . . . Engineered for long life, low line loss and DEPENDABLE all-weather signal transmission . . . over the longest link. Federal's K-14, RG-11/U and RG-59/U are the H-F coaxials you can specify with utmost confidence . . . for community TV Distributing Systems in any area . . . for any amplifier system used.

Wherever the annoying, profit-eating problems of signal leakage and revenue loss exist, the answer is Federal's new K-125 and K-126 *non-radiating* alternates for RG-11/U and RG-59/U—used in conjunction with Federal's K-14 — the primary lead-ins famous for lowest line loss, long cable runs and fewer amplifiers required. Both K-125 and K-126 are *double-shielded* and *double-jacketed*.

All of the "BIG 5" are made to Federal's high standards of quality — and that means *dependable, all-weather transmission performance!*

Principal characteristics of Federal's "BIG 5" of Community TV

TYPE	ZO Impedance Ohms	Capacitance per ft. micro-micro farads	ATTENUATION DB per 100 Feet 50Mc	100Mc	200Mc	400Mc	Jacket OD Mils (Max.)	Weight per 1000 Ft. (lbs.)

An Original Development by Federal

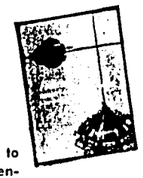
RG TYPE CABLES

WITH THE NEW LOW-TEMPERATURE NON-CONTAMINATING THERMOPLASTIC JACKET

Federal is supplying low temperature non-contaminating jackets on all cable types which now call for it and will also supply such compounds for specific cables to meet customers' requirements. The low temperature, non-contaminating jacket was an original Federal development.

The new RG types are outstanding for their longer service life under the most adverse conditions. Their non-contaminating feature means there is no reduction in dielectric strength due to molecular migration.

New HR* WIRES



14 to 24 AWG

High impact strength, resists thermal shock. Impervious to the action of corrosive chemicals and highly resistant to most organic solvents. Water absorption is nil therefore the corona formations and surface flash-over are minimized. Low cold flow. Covers a wide temperature range (—55°C—150°C) to cover any application for hook-up wire. Also can be used at lower temperatures and higher temperatures for short periods.

TEFLON INSULATED WIRE and CABLES

Your inquiries are invited on these new Federal wires and cables.

*Heat Resistant

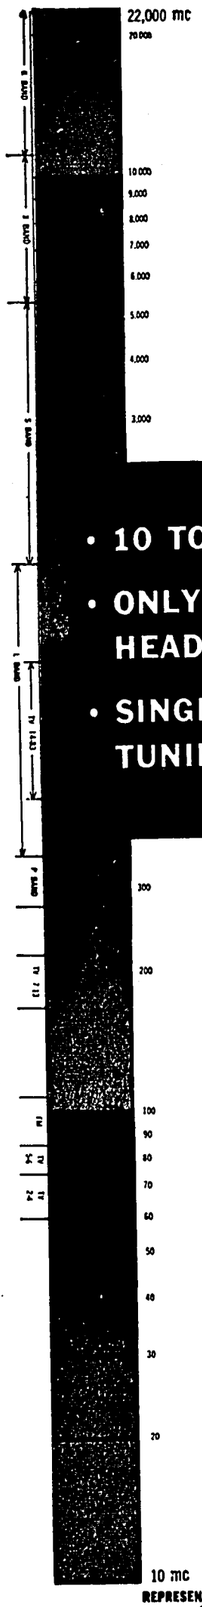
problems?

let KEYSTONE custom-engineer the most effective solution

When just an ordinary transformer or magnetic amplifier won't do, call on KEYSTONE — a leading producer of custom-engineered equipment to meet unusually difficult specifications.



Standard or subminiature transformers available to provide unique electronic accuracy, special quality, lower weight, or other critical factors.

New KEYSTONE "Moto Mag" pre-designed magnetic amplifiers lick problems before they get started — save precious engineering time. By utilizing these pre-engineered "Moto Mags" in servos, computers, remote control devices, and other variable phase power units you'll save planning headaches and production dollars. We'll be glad to demonstrate how "Moto Mags" can work effectively for you.

Write, wire or phone for additional details, technical information and quotes — now!

KEYSTONE PRODUCTS COMPANY
UNION CITY 2, N. J.—UNION 6-5400

NEW! PORTABLE DIRECT READING SPECTRUM ANALYZER

saves engineering manhours!

- 10 TO 22,000 MCS
- ONLY 3 R. F. HEADS
- SINGLE DIAL TUNING

Model No. Equipment
Model TSA Spectrum Display and Power Supply
Model STU-1 R-F Tuning Unit 10-1,000 mc.
Model STU-2 R-F Tuning Unit 910-4,560 mc.
Model STU-3 R-F Tuning Unit 4,370-22,000 mc.

SPECIFICATIONS:
Frequency Range: 10 mc to 22,000 mc
Frequency Accuracy: 1%
Resolution: 20 kc
Frequency Dispersion: Electronically controlled, continuously adjustable from 50 kc/in. to 7 mc/in.
Input Impedance: 50 ohms
Over-all Gain: 120 db
Attenuation: RF—internal: 120 db continuously variable IF—60 db continuously variable
Input Power: 400 watts

Now, a new Polarad spectrum analyzer only 21 inches high that covers the entire frequency range 10 to 22,000 mcs with but 3 interchangeable R—F tuning heads. The model TSA operates simply—single dial frequency control—with utmost frequency stability. It provides highest accuracy, and reliability for observation and true evaluation of performance over the entire R—F spectrum—saving engineering manhours.

This instrument is designed for maximum utility and versatility in the laboratory and on the production line providing an easy-to-read 5 inch CRT display of the R—F spectrum.

The model TSA Spectrum Analyzer has these exclusive Polarad design and operating features:

- Single frequency control with direct reading dial. No klystron modes to set. Tuning dial accuracy 1%.
- Only three interchangeable R—F tuning units for the entire frequency range 10 to 22,000 mcs.
- Temperature compensation of Klystron Oscillator.
- Swept IF provides 250 kc to 25 mc display independent of R—F frequency setting.
- Internal R—F attenuator.
- Frequency marker for measuring frequency differences from 100 kc to 25 mc.

Write today to your nearest Polarad representative, or directly to the factory for complete information.

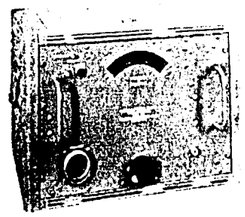
MSG-4	6950-10,800
MSG-4A	6950-11,500



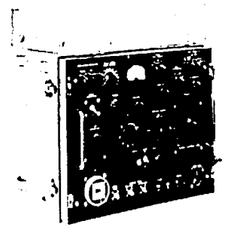
MSG 3-4

MSG 1-2

Signal Generators
Direct reading, single dial frequency control, with internal FM and pulse modulation circuits, as well as provisions for external synchronization. Delayed and undelayed sync output. Frequency accuracy ± 1%. Attenuator accuracy ± 2 db. Extremely stable. Rugged construction.

650-10,750 MC

Signal Sources
Microwave power output with a direct reading, single dial frequency control. Provisions for external square wave and FM modulation.
Model KX, Klystron Power Supply, especially designed for Polarad Signal Sources is available. Works with all 5 models. Has 1000 cps square wave output for modulating purposes. Stable output.



MINIMUM POWER AVAILABLE FROM POLARAD SIGNAL SOURCES IN THE RANGE OF 650 TO 10,750 MC

FREQUENCY RANGE		MODEL SSR 650-1350MC	MODEL SSL 1050-2350MC	MODEL SSS 2200-4550MC	MODEL SSM 4350-8250MC	MODEL SSF 8000-10,750MC
MINIMUM POWER AVAILABLE (mw)	Low Range	150	40	15	10	10
	Middle Range	400	150	60	20	30
	High Range	100	100	40	15	10

12,700-50,000 MC

Signal Generators—12.7-39.7 KMC—A new line of signal generators covering the K and Q Bands. Internal square wave modulation and provisions for external modulation. Power meter to check internal R.F. and external source R.F. Power.

Signal Sources—12.7-50.0 KMC—A new line of signal sources providing microwave power in the K, Q and V Bands. Internal square wave modulation and provisions for external modulation.

Signal Generators Model No.	Frequency Range in KMC	Signal Sources Model No.
SG-X12	12.8 to 17.5	SS-1218
SG-6178*	15.75 to 16.25	SS-1516
SG-QK368*	16.25 to 16.75	SS-1617
SG-6253	18.0 to 22.0	SS-1822
SG-6754	22.0 to 25.0	SS-2225

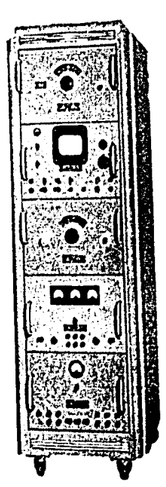
SG-QK140	29.7 to 33.52	SS-3033
SG-QK291	33.52 to 36.25	SS-3336
SG-QK292	35.1 to 39.7	SS-3540
	37.1 to 42.6	SS-3742
	41.7 to 50.0	SS-4150



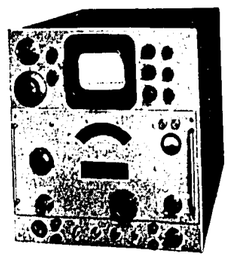
*Provided with internal pulse and FM modulation.

MICROWAVE SIGNAL ANALYZING EQUIPMENT

10-35,000 MC

LSA Laboratory Spectrum Analyzer
with 5 interchangeable R.F. heads

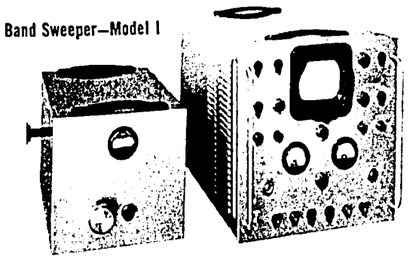
R.F. Head	Frequency Range in MC
LTU-1	10–1000
LTU-2	940–4500
LTU-3	4460–16,520
LTU-4	15,000–21,000
LTU-5	20,850–35,000



5 interchangeable R.F. heads provide continuous coverage from 10 MC to 35,000 MC. Single dial tuning allows for quick and simple display of any frequency spectrum. Frequency dispersion from 250 KC to 25 MC with an internal marker measuring frequency differences up to ± 12.5 MC on a 5 in. CRT display.

10-21,980 MC

TSA Bench Model Spectrum Analyzer
with 3 interchangeable R.F. heads

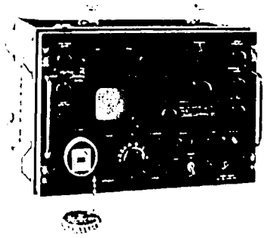


R.F. Head	Frequency Range in MC
STU-1	10–1000
STU-2	915–4560
STU-3	4370–21,980

3 interchangeable R.F. heads provide continuous coverage from 10 MC to 21,980 MC in a portable, table-top spectrum analyzer. Single dial tuning allows for quick and simple display of any frequency spectrum. Frequency dispersion from 250 KC to 25 MC with an internal marker measuring frequency differences up to ± 12.5 MC on a 5 in. CRT display.

8500-9600 MC

X Band Sweeper—Model I



A new X-Band Sweep Generator provides R.F. energy swept continuously from 8,500 to 9,600 MC. Allows the use of UHF testing techniques in the microwave region. Two independent sweep amplifiers provide a simultaneous visual display of reflection and transmission characteristics.

Output Variation: ± 1 DB max. | Frequency Range: 8,500-9,600 MC
Sweep Rate: 12 CPS. | Output: + 12 DBM.

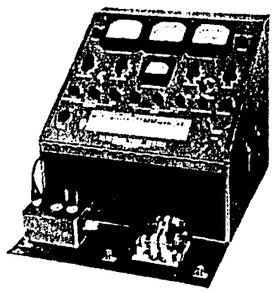
12,700-39,700 MC

Spectrum Analyzers

Model No.	Frequency Range KMC
SA-X12	12.8 to 17.5
SA-6178	15.75 to 16.25
SA-QK368	16.25 to 16.75
SA-6253	18.0 to 22.0
SA-6254	22.0 to 25.0
SA-QK289	27.27 to 30.0
SA-QK140	29.7 to 33.52
SA-QK291	33.52 to 36.25
SA-QK292	35.1 to 39.7

A new line of portable spectrum analyzers covering the K and Q Bands, presenting the frequency distribution of R.F. energy on a 3 in. CRT display. The units are self-contained including an R.F. section, display unit and power supply.

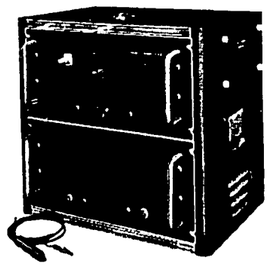
MICROWAVE GENERAL LABORATORY EQUIPMENT



DC-11,000 MC

Micro Power Meter—Model P-1

Measures RMS power from DC to 11,000 MC, utilizing a single power sensitive probe. The elimination of hot wire barreters and other delicate components enables the probe to withstand overloads up to 150% without burnout or other damage. Simple operation. Rugged construction.



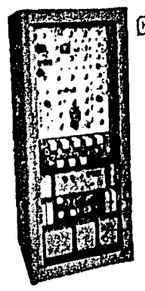
Frequency Range: DC-11,000 MC
Single Probe Operation
Power Ranges: 0-20 mw
0-100 mw

Klystron Tube Tester—Model K-100

Compact, portable instrument designed to test performance quality of all commercially available klystron type tubes. Provides complete metering facilities, control adjustments and convenient tube data chart. Safety features.

10 CPS-20 MC

Wide Band Video Amplifier—Model VT



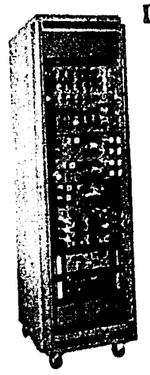
An oscilloscope deflection amplifier for the measurement and viewing of pulses of short duration and rise time.

Frequency Response: flat from 10 cps to 20 mc.
Amplifier Gain: 320 (50 db.)
Phase: Linear with frequency.
Output: 120 V. pk. to pk.

ELECTRONICS CORPORATION
100 METROPOLITAN AVENUE
BROOKLYN 11, NEW YORK

POLARAD
COLOR TV
& B/W EQUIPMENT

TV PICTURE AND SIGNAL GENERATING EQUIPMENT



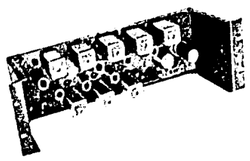
Color Synchronizing Generator—Model PT-201

Furnishes NTSC color TV subcarrier frequency component and contains divider network to yield 31.5 KC signal. Provides driving, blanking and synchronizing pulses, as well as vertical and horizontal dots for linearity checks. Utmost stability assured by driving all pulses from leading edge of crystal controlled oscillator.

Output Signals: (4 to 6 Volts, 75 Ohms, pos. & neg. polarity):
Synchronizing Signal
Camera Blanking Signal
Horizontal Drive Signal
Vertical Drive Signal
Composite Video Output
NTSC Color Subcarrier Freq. (3.579545 mc/s)

Black & White Synchronizing Generator—Model PT-104

Same as color synchronizing generator. Furnished without Subcarrier Frequency Generator.

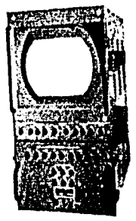


Color Bar Generator—Model PT-203

Provides color TV test signals, NTSC standards, for color TV equipment, networks and components. Supplies complete composite video signal in the form of seven fundamental color bars simultaneously with seven gradations of gamma bars.

Output Signals: Composite Video (2 outputs) (Sync. negative & positive)
Signal Information:
7 Bars of Color
7 Bars of Gamma Gradations
White Dot Pattern (Vert. and Hor.)
Ext. Video Input for Mixing:
2 Volts neg. polarity

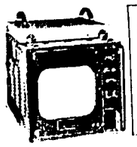
Other Equipment Available



An NTSC Color TV Flying Spot Scanner, furnished as a completely packaged unit supplying a standard color video signal. And, a Monoscope Signal Source—Model PT-102 used for transmitting a laboratory quality black and white test pattern.

Color Subcarrier Frequency Generator —Model PT-202

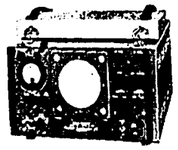
Modifies any existing standard (B/W) synchronizing generator in accordance with NTSC color TV standards by supplying NTSC color subcarrier frequency of 3.579545 mc/s ± 0.0003%. Also, contains divider network to yield 31.5 KC signal.



TV MONITORING EQUIPMENT

Color Video Monitor—Model M-200

Consists of two portable units —uses 15 inch RCA tri-color Kinescope. Checks quality of NTSC color video signals in studio, on transmission, or in factory. Excellent synchronizing stability. Displays highest definition transmitted pictures with exceptionally good color rendition. All controls on front panel. Instrument may be rack mounted or employed as field test equipment.



Signal Polarity: Positive, Negative, Balanced
Input Video Signal: 0.5 to 2.0 Volts, peak to peak
Input Impedance: 66 mmf across 2.2 megohms
Resolution: 250-300 lines (Full Utilization of NTSC Color Signal Bandwidth)
Linearity: Better than 2% across raster, Horizontal and Vertical

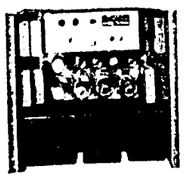
Studio Picture Monitor—Model M-105

A portable instrument used to check the picture quality of video signals in either a black/white or color television system. The unit employs a 12½" aluminized kinescope and is capable of presenting high definition transmitted pictures.

Signal Polarity: Positive, Negative, Balanced
Input Video Signal: 0.25 to 2.0 Volts, peak to peak
Input Impedance: 66 mmf across 470,000 ohms
Retrace Time: 4 microseconds
Resolution: Greater than 450 lines

Portable Wave Form Monitor—Model TO-1

Portable instrument designed for waveform analysis and amplitude measurement of NTSC color and B/W video signals in television circuits. It may be used, however, as a general purpose instrument. Means are provided for calibrating or comparing signals observed, and for selecting desired vertical amplifier bandwidth.



Deflection sensitivity: Greater than 0.1 Volts/In.
Hor. expansion: 20 tube diameters
Input Signal Level: 0.05 to 300 Volts peak to peak
Frequency Response Vertical Amplifier:
I.R.E. —3.5 db at 2 mc.
Normal —3.0 db at 4 mc.
Line Test—3.0 db at 6 mc.

Other Monitors Available:

Model M-102: High quality picture and wave form monitor.

Model 102MPS: 7" Kinescope, portable picture monitor.

GENERAL EQUIPMENT

Power Supplies

Model No.	Output Voltage	Output Current
PT-110	400-450 V.	250-300 Ma
PT-111	250-300 V.	100-400 Ma
PT-111D*	250-300 V.	100-400 Ma
PT-112	250-300 V.	150-800 Ma

*Double Output

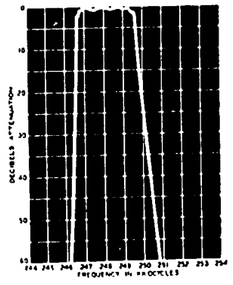
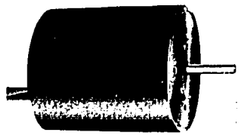
COLLINS INDUSTRIAL COMPONENTS

During the past 20 years Collins Radio Company has pioneered many of the outstanding advancements in the radio-communications and electronics industry. Collins engineers had to develop unique and unusual systems and components to meet the superior standards of Collins equipment. These components, plus application recommendations, are now available to the electronics industry. Collins industrial components can help you. Send the coupon below for complete information.

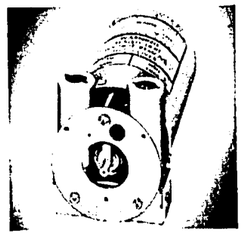


MECHANICAL FILTERS

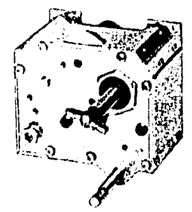


Compact, permanently tuned band pass filters for intermediate frequency amplifier applications. Mechanical elements of the filter provide characteristics close to the ideal rectangular selectivity curve. It is a hermetically sealed component requiring no adjustments. Selectivity curves for two of the 23 standard Mechanical Filters are reproduced at right.

Type F455B-31 Center frequency, 455 kc, band-width, 3.1 kc; plug-in terminal arrangement.



Type F250Z-2 – Center frequency, 248.2 kc; bandwidth, 3.2 kc; solder terminal arrangement.



Collins HYSTERESIS MOTORS

Useful for driving timing devices, facsimile equipment, commutators, or any device which must rotate at an absolutely constant speed regardless of load or line voltage variations. Type 370A-1 Wide Band Synchronous Motor is illustrated . . . produces synchronous rotation from motionless to 30,000 RPM.

Collins OSCILLATORS

Long famous for their accuracy and stability, Collins Variable Frequency Oscillators are now available. They give transmitters, receivers, frequency standards or test equipment accurate linear dial calibration and superb stability. Collins Oscillators are available in a number of frequency ranges.

Collins AUTOTUNES AND AUTOPOSITIONERS

Collins Autotunes, the basis for both remotely and directly controlling automatic tuning of high quality communication equipment, are suitable for many industrial applications. Collins Autopositioners are used where up to 20, or more, pre-determined, fixed positions are needed. Available as individual units or in complete systems.

21M	

SPEECH EQUIPMENT AND ACCESSORIES

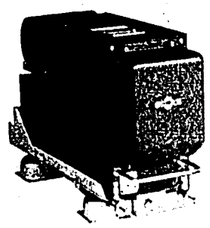
Collins complete line for AM and FM broadcasting is listed in the Collins Speech Equipment Catalog. It pictures and describes a wide variety of high quality speech input consoles, remote equipment, rack mounted audio units, test and control apparatus, transducers, power supplies, meter and jack panels, terminal boards, cabinets — everything needed in building a new station or modernizing an old one. Collins Speech Equipment Catalog should be kept in the files of all broadcast engineers as a standard reference work. Your nearest Collins office will be glad to supply a copy to your station upon request.

INDUSTRIAL COMPONENTS

Autotune, a Collins patented automatic rotary positioning device used for accurate remote control of communication receivers and transmitters by means of adjustable positions. It can also be used for the control of many types of industrial equipment.
Autopositioner, a mechanism which will set a shaft accurately to any one of several fixed positions by remote control. It is fast and quiet and is built for long service.
Hysteresis Motors, 370A Series motors designed primarily for operation from vacuum tubes. Have split windings for operation directly from the plate circuits of two push-pull direct-coupled amplifiers driven 90 degrees out of phase. High starting torque . . . absolute synchronous rotation.
Mechanical Filter gives a close approach to the ideal rectangular selectivity curve by using resonant mechanical elements, rather than tuned electrical circuits. Many operating frequencies and band widths are available. When used in a receiver's IF strip, the carrier and one sideband of an AM signal can be accepted while the other sideband is rejected. 3 kc bandwidth filter is ideal for AM or SSB.

AMATEUR EQUIPMENT

75A-3 Receiver incorporates the Collins Mechanical Filter — a new concept in receiver performance. Either 3 kc or 800 cycle bandwidth selected by a front-panel switch. AM signals can be tuned to accept the carrier and either one of the sidebands at will while the other sideband is rejected. Ideal for reception of single sideband signals. It is an extremely stable double conversion superheterodyne receiver, covering the 160, 80, 40, 20, 15, 11 and 10 meter bands. Permeability tuned; crystal controlled h-f oscillator; dial calibrated directly in frequency; extremely sensitive with great tuning accuracy and high signal to noise ratio; 50 db image rejection on all bands; automatic noise limiter; amplified, delayed AVC with quick recovery; miniture tubes.
Price including 3 kc mechanical filter, less speaker $530.00
10" speaker in matching cabinet 20.00
35C-2 Low Pass Filter inserted in well shielded transmission line from 32V-1, 2, or 3, provides approximately 75 db attenuation of harmonic emissions at the television frequencies. Price $40.00



AVIATION EQUIPMENT

618S 144-Channel HF Transceiver, 100 watt power output on 144 crystal controlled channels. Automatically tuned elements insure maximum flexibility and high power output.
180L-2 Antenna Tuning Unit, automatically matches 618S output to aircraft antenna. Can be used with any transmitter having an output impedance adjustable to 52 ohms and 50 to 150 watts power output.
51R-3 VHF Navigation Receiver, fulfills navigation and communication receiving requirements of all types of military, commercial and private aircraft using the 108 to 136 megacycle band.
17L-3 180-Channel VHF Airborne Transmitter, frequency range 118.0 to 135.9 megacycles. All 180 channels easily selected on a simple, positive remote control system. Power output conservatively rated at 8 watts.
17L-4 360 Channel VHF Transmitter, ½ ATR size to make room for additional equipment. 25 watt power and 360 automatically tuned channels assure instantaneous VHF communications in all high density areas. Maximum stability is maintained through pretuned crystals. Maximum selectivity is assured with 50 kc spacing.

51V-2 Glide Slope Receiver

Approach Horizon and Course Indicator, Collins FD-103 Integrated Flight System

430 Series Communication Transmitter

30K-5 2-Channel Communication Transmitter

Spurious radiation and harmonic interference kept to a minimum. Unit weighs 25 lbs.
17M 360-Channel VHF Airborne Transmitter, full 360 channels in the range of 118.0 -135.9 mc. 50 watt power output with phone emission. Meets ARINC Spec. #520.
51X 360-Channel VHF Airborne Communications Receiver, companion to 17M and 17L-4 Transmitters. Complete new design to meet ARINC Spec. #520 for 45 kc bandwidth. Has the sensitivity, selectivity and spurious response rejection characteristics required for flight and airport traffic control.
51Z Marker Beacon Receiver is completely dependable, highly selective and free from spurious response. Operates lights with minimum "twilight" indication.
37J-3 VHF Airborne Omni-range Antenna, for use with 51R-3 navigation receiver. Drag, 2.63 lbs. at 250 m.p.h.
37R-1 VHF Airborne Communication Antenna, for use with Collins VHF two-way communications system.
37P Airborne Glide Slope Antenna mounts on nose of aircraft, and provides greatly improved pickup and receiver performance.
51V-2 Glide Slope Receiver, designed for reception of 90/150 cps tone modulated glide slope signals on any of the twenty channels in the UHF range.
Collins FD-103 Integrated Flight Systems simplifies ILS approaches by presenting precise steering information in conjunction with simplified pictorial type instruments. Instrumentation also simplifies enroute navigation.
Collins NC-101 Navigation System, provides the pilot continuous position information by automatically computed triangulation, using two VOR systems.

478C IFS Test Equipment, bench tester for IFS Computer, automatic pilots and other flight director equipments.
479T-2 Signal Generator, a precise ramp-test equipment for airborne VOR localizer and glide slope receivers.
479S-3 Audio Signal Generator is used in precision bench testing of omni-range, localize and glide slope receivers. Output signals for VOR, localizer, and glide slope audio circuit investigations are provided.

GROUND STATION EQUIPMENT

430 Series Transmitters, choice of 12 different models — 1 or 2 kw, conservatively rated — phone, CW or FSK. Transmission on any of ten instantly selectable, pre-set channels over entire range from 2 to 30 mc. Common sub-unit construction provides wide variety and low cost.
30K-5 Transmitter, 2 channels, pretuned to any frequency between 2 and 30 mc. 300 w CW. 250 w phone.
32RA-9 Transmitter, 4 channels, pretuned to any frequency between 1.5 and 15 mc. 75 w CW. 50 w phone.
51J-3 Receiver provides continuous coverage from 500 kc to 30 mc, with very high stability and tuning accuracy.
51M-7 VHF Rack Mounting Receiver, single channel, pretuned to any frequency between 118 and 136 mc.
51N-2 Receiver, single channel, for A1, A2 and A3 reception, pretuned to any frequency between 2 and 24 mc. Mechanical filter kits available.
242F VHF Transmitters, rack mounted, providing single frequency operation between 118.0 and 136.0 mcs. Choice of 200 watts or 50 watts power into 52 ohms.

In requesting complete technical information on any Collins products please specify equipment type number.

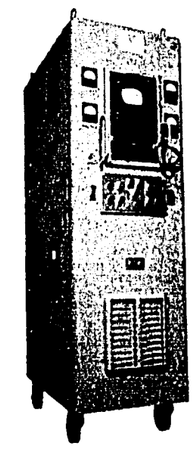
ELECTRONIC *Test and Production* INSTRUMENTS

ELECTRONICS & X-RAY DIVISION · F-R MACHINE WORKS, INC. ·

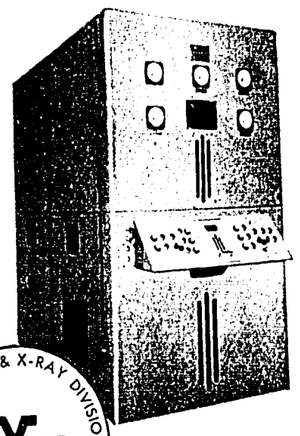
For the producer of electronic or microwave systems, FXR provides a distinctive service . . . with quality components that measure up to the finest standards of design, craftsmanship and performance. The FXR line of Test and Production Microwave Equipment consists of Electronic Instruments and Waveguide Components.

These Electronic Instruments, which include Antenna Pattern Analyzers and High Power Pulse Modulators, were designed throughout by FXR engineers and produced in quantity in our own large plant. The Waveguide Components consist of such units as rotary joints, waveguide switches, horns, cavities, dummy antennas and loads, antenna scanners, and duplexers.

Whether for tube production, radar systems, microwave relay units, or guided missile applications . . . whether the project is large or small . . . FXR has the experience and facilities to produce your special needs accurately, swiftly—at lowest cost.



Custom Engineered and Built

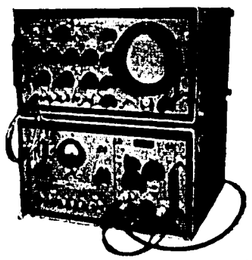


HIGH POWER PULSE MODULATORS

These rugged line type modulators are custom engineered for continuous operation. Ease of operation, minimum of high voltage hazard, and maximum accessibility of all components are uppermost considerations in the design.

14 MEGAWATT UNIT
Type Z821A

- Input voltage 440 or 550 volts—3 phase
- Internal signal generator for trigger pulse
- Output pulse for external synchronization
- Motor driven high voltage and heater controls
- Automatic voltage backdown on magnetron sparking
- Output voltage—90 kv at 160 amperes
- Output Z = 560 ohms
- PFN—2.0 microseconds at 500 cycles/sec
- Maximum duty = .001
- Internal pulse voltage and current viewing facilities



ONE MEGAWATT UNIT
Type Z820A

- Input Voltage—190–250 V single phase
- Provisions for mounting internal synchroscope
- Remote control operation
- Motor driven high voltage and heater controls
- Output Z = 1000 ohms
- PFN1—0.5 microseconds at 2000 cycles/sec
  PFN2—2.5 microseconds at 400 cycles/sec
- Internal pulse voltage and current viewing facilities

Custom Engineered and Built

ANTENNA PATTERN ANALYZERS
Type T705A

FXR ANTENNA PATTERN ANALYZERS are general purpose test equipments designed for measuring the radiation patterns of rotating antenna systems. The analyzer, a receiver and indicator unit, has the following characteristics:

- Visual pattern display
- Response vs angle of rotation
- 1 to 10 kmc
- Four plug-in r-f heads
- Superheterodyne receiver
- Single knob oscillator control
- CW or pulsed operation
- Field or laboratory use

Data subject to change without notice. Prices on application.

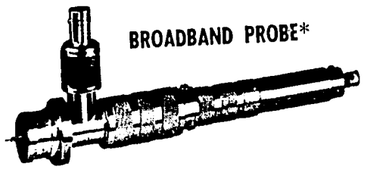
PRECISION MICROWAVE TEST EQUIPMENT



With its comprehensive line of Precision Microwave Test Equipment, FXR has developed a new, fresh-as-grass approach to the problems of microwave measurement. Every FXR product has been carefully evaluated in the light of latest advanced developments, the greatest accuracy and convenience in use, and the *cost*-conscious needs of the *quality*-conscious engineer who employs it . . . in the laboratory and on the production line. A large, fully equipped FXR plant . . . a well-rounded, growing staff of seasoned engineers . . . are capable of fulfilling your exact requirements with the fastest service in the industry, at costs well below the "sit-and-wait" variety.

PRECISION SLOTTED SECTIONS

*TYPE NO.	FREQUENCY RANGE (kmc/sec)
L100A WG	1.12 to 1.70
N101A 3⅜ COAX	1.00 to 4.00

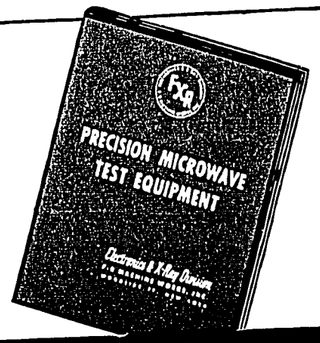
DIRECT READING Frequency Meters

DESIGNED for easier, more accurate readings...



Tried and true—the FXR Type 410A Direct Reading Frequency Meters give you bull's-eye accuracy, right to the exact reading spot. No more jiggling of many dials, no more complicated calculations. Human error factor is eliminated. These dependable FXR units provide the most convenient means available for determining oscillator frequency in the microwave region.

ECLIPSE-PIONEER

NOW!...

from the world's largest producer of gyros...

RATE GYRO

Type No. 15814-1-A

Overall Size—2" x 2"

MOTOR: 26 volts, 400 cps. 3 phase with rated speed of 22,000 rpm and a rotor moment of inertia of 175 gram-cm².

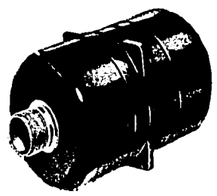
PICKOFF: 26 volts, 400 cps, single phase with "E" type variable coupling. With resistive load of 10,000 ohms, tuned output is 6 to 7 volts at maximum rate. Null is 30 millivolts with an armature travel of 2½° to 3° either side of null.

DAMPING: Accomplished by fluid flotation of gimbal. Damping factor is 0.5 to 0.7 of critical, but values up to and including 1.0 of critical can be provided.

NATURAL FREQUENCY: 50-55 cps (undamped).

WARM-UP TIME: One minute.

RANGE: Maximum rate is 450 ± 20°/second. Minimum detectable rate is less than 1.5°/second. Other maximums and minimums are available.



ENVIRONMENTAL CHARACTERISTICS: −20°F. to 140°F. temperature operating range. Maximum shock is 60 g. Vibration operating range of 5 g. from 20 to 300 cps. Positive hermetic seal.

WEIGHT: 13.5 ounces complete with mounting bracket and electrical connector.

FREE GYRO

Type No. 14108-1-A

Overall Size—3⅜" x 5 5/16"

MOTOR: 26 volts, 400 cps, 3 phase with rated speed of 22,000 rpm and a rotor moment of inertia of 1260 gram-cm².

DRIFT RATE: Will not exceed 1° per minute when subjected to Scorsby test at amplitude of ± 15° and rate of approximately 6 cpm (corrected for earth's rotation).

PICKOFF: Autosyn type with peak value of 20 volts. Initial slope of output voltage curve about null position is 0.35 volts per degree ± ten per cent. Phase shift is less than 20 degrees. Residual voltage is less than 50 mv.

WARM-UP TIME: Within two minutes.

OPERATING LIFE: Rated at 500 hours.

ENVIRONMENTAL CHARACTERISTICS: Maximum operating temperature of 195°F. and a minimum of −20°F. Maximum allowable shock is 60 g. with maximum operating vibration of 7 g. (from 10 to 500 cps). Maximum excursion not to exceed 0.5 inches. Positive hermetic seal.

WEIGHT: Approximately 4.2 lbs.

CAGING AND UNCAGING: Can be caged remotely by applying 26 volts, 400 cps, single phase and 28 volts DC power. Will cage from any position of gimbals within 30 seconds with gyro rotor at full speed. Application of 28 volts DC will uncage within 0.1 seconds.

HERMETICALLY SEALED

ROLL GYRO TRANSMITTER

Type XD 790412

Power requirements	.45 volts, 3 phase, 800 cps
Gyro speed	22000 RPM
Gyro moment	3300 gram cm²
Acceleration time	7 minutes @ 45 volts 15 minutes @ 75 volts
Weight	6.0 pounds
Size	4⅞" dia.—5 5/64" long
Drift	below 0.5°/minute
Precession under 3RPS	below 1.2°/minute
Caging time	1 minute (28 volts D.C.)
Pickoff excitation	6 volts, 5000 cps 1Φ and 26v 400 ⏦ 1Φ
Pickoff output	60 mv./degree

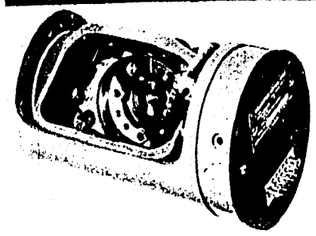
COMPLETE FREEDOM ON 2 AXIS

TWO AXIS - GRAVITY ERECTED

VERTICAL GYRO TRANSMITTER

Type No. 14104-1

Diam.—6⅛" Height—6¾"



Weight—6¼ lbs.

Designed for use as a remote vertical reference where vertical stabilization is required. The instrument is essentially an electrically driven, vertical-seeking gyro with separate Autosyn transmitter pick-offs on the pitch and bank axes. Sealed in an aluminum case against environmental conditions.

- *Operating temperature range:* −55°C to +70°C.
- *Operational limits:* 360° in roll and pitch with controlled tumbling of the pitch axis at near 90°.
- *Erection device:* A two-ball erection system maintains the gyro in a vertical position to within ¼° of vertical position with respect to the earth.
- *Caging:* From any position at full rotor speed in less than 45 seconds.

VERTICAL GYRO TRANSMITTER FOR RADAR AND AUTO PILOT CONTROL

TYPE 14110-1-A

FEATURES: Includes quick erecting mechanism which makes the remote unit ready for operation within 3 minutes. • Two ball erection system. • Non-tumbling stops. • Inclined axis (1 degree) to minimize turn error.

Power Requirement . . . 115 v, 1 phase, 400 cps Starting . . . 19 w .9 P.F. Running . . . 13 w .85 P.F.

Gyro Speed . . . 22000 RPM

Erection rate (normal) . . . 3°/minute

Weight . . . 2¾ lbs.

Size . . . 3⅛ diameter x 5 11/16 long

Gyro Moment . . . 600 gram cm²

Autosyn excitation . . . 26 v, 400 cps

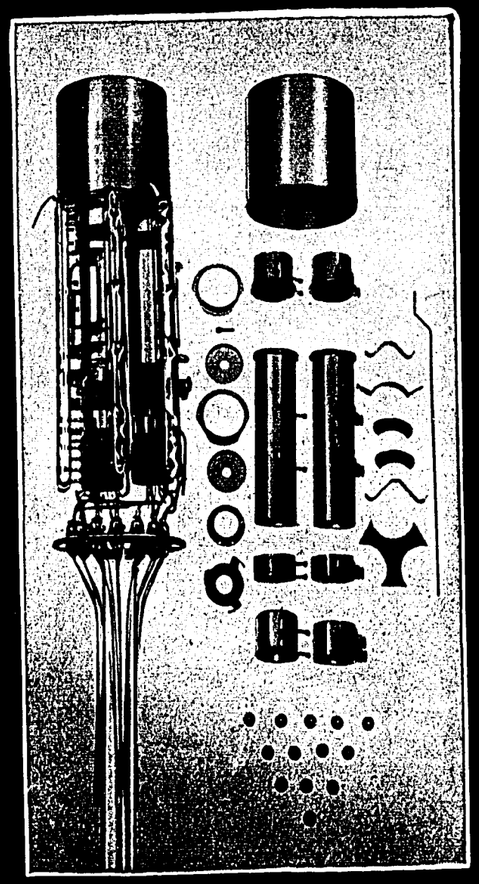
WATCH JOHNSON & HOFFMAN FOR THE LATEST DEVELOPMENTS IN COLOR TV PICTURE AND RECEIVING TUBE PARTS AND COMPONENTS

COLOR TUBE PARTS



Johnson & Hoffman Mfg. Company Announces a Complete Line of Color Tube Gun Parts and Components

After months of intensive tooling and preparation, Johnson & Hoffman Mfg. Co. is now geared up to immediately supply a complete line of Color Picture Tube Parts in small or mass production quantities. From the smallest stem eyelet to the large convergence lens cup we are completely and permanently tooled in our own plant to produce all parts now utilized in color tube applications.

The same deep drawing techniques successfully pioneered by Johnson & Hoffman Mfg. Co. for black and white CR tubes are now being applied to the production of seamless anodes, grids and other parts employed in the new color gun designs.

If you have a technical problem in connection with your particular gun design requirements, we will be pleased to extend competent assistance and service. Our experience may suggest valuable possibilities which may improve your product and reduce costs.

Depend on Johnson & Hoffman Mfg. Co. for your complete source of precision crafted parts for both color and black and white tube applications.

The Tri-Color gun illustrated features Johnson & Hoffman Mfg. Co. parts now currently available to the industry.

Leading Cathode Ray Gun & Tube manufacturers are already specifying Johnson & Hoffman Mfg. Co. parts for their color tube designs in addition to their standard requirements for black and white tube parts and sub assemblies comprising Electro-Magnetic, Electro-Static, Internal Focusing Designs, both in Glass Post and Ceramic Construction.

Your inquiries for special or standard parts will receive prompt and courteous attention.

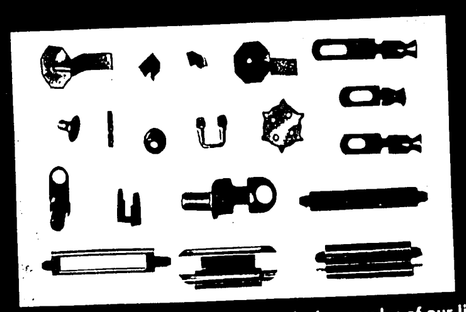
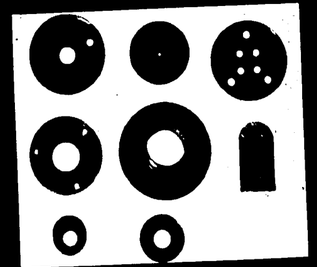
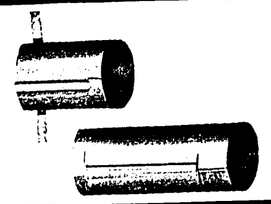
Johnson & Hoffman gun parts lend themselves to present Color Tube gun designs. We are also actively engaged in development work on special parts for advanced color tube gun applications.

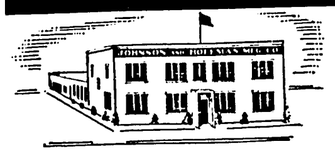




GUN ASSEMBLY FOR ELECTRO-STATIC TYPE TV PICTURE TUBES.



NEW IMF (Internal Magnetic Focus) GUN



Illustrated above are typical examples of our line of standard and special electronic items currently being produced for leading manufacturers.

Illustrated are lockseam anodes which are now available in various lengths and are being produced on new U. S. tool multi slide equipment which we have acquired as a further expansion of our present metal fabricating facilities. These parts, along with other radio and electronic items such as plates, supports, shields, and other staked and lockseam products will be cataloged as they are made available to the industry.

Your inquiries for these and any other parts components will receive courteous and prompt consideration.

Unit Instruments and Coaxial Accessories for VHF-UHF MEASUREMENTS

on Antennas, Lines, Coaxial Components, Lumped and Distributed Networks and Circuits

Type 874-LB Slotted Line

The compact and inexpensive instruments listed on these pages permit rapid and accurate measurements of Impedance, VSWR, Reflection Coefficient, Voltage, Power and Attenuation. Their versatility, ruggedness and convenience in use make them extremely adaptable in laboratory or field.

. . . a precision-tooled instrument invaluable for laboratory impedance measurements and determinations of VSWR or mismatch . . . at any frequency from 300 to 5000 Mc.

Superior electrical characteristics and many operating conveniences, coupled with compactness and light weight, make this device extremely useful in field work as well as in the development laboratory.

In no other way are the fundamentals of high-frequency wave propagation more effectively illustrated. The Slotted Line clearly indicates positions of minima and maxima, and determines voltage-amplitudes and effects of different load terminations. It is a widely useful, low-cost demonstration piece for college or high school laboratory classes.

Features

Frequency Range: 300 Mc to 5000 Mc

Accuracy: constancy of probe coupling ±2½% or better

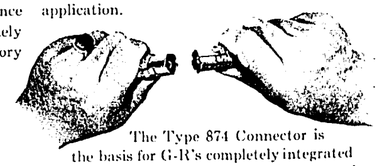
Characteristic Impedance: 50 ohms ±1%, throughout — inner conductor is supported at its ends only, minimizing discontinuities

Connectors: Type 874 with standing-wave ratio less than 1.05 to 4000 Mc

Probe Penetration: fully adjustable

Probe Travel: 50 cm

Probe-Carriage Drive: free sliding for rapid travel, vernier for fine adjustment



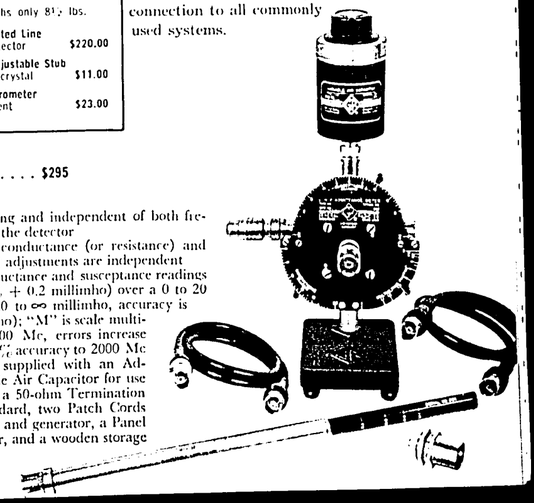
Scale: calibrated in centimeters — can be shifted to simplify calculations

Accessory Micrometer Vernier: for measurement of high standing-wave ratios by the "width of minimum" method

Portability: weighs only 8½ lbs.

Type 874-LB Slotted Line with crystal detector	$220.00
Type 874-D20 Adjustable Stub for tuning with crystal	$11.00
Type 874-LV Micrometer Vernier Attachment	$23.00

These are reliable, light-weight equipments in which specific functions are isolated in separate compact units. Combinations of these units permit innumerable setups for almost any vhf-uhf application.



The Type 874 Connector is the basis for G-R's completely integrated system for u-h-f measurements. Any two of these connectors plug smoothly into each other, completely eliminating the need for male and female parts — electrical uniformity is excellent — all units are designed for use on 50-ohm systems.

★ ★ ★

The field of application for the Slotted Line and Admittance Meter is much enlarged due to the many accessories now available for measurements on antennas, lines, coaxial components, and lumped and distributed networks.

The Constant-Impedance Adjustable Line simplifies impedance measurements and eliminates line-length corrections between measuring point and unknown — the Balun and new Adaptors to v-h-f and u-h-f transmission lines make possible accurate measurements on balanced tv receiving-antennas and transmitting systems — the Component Mount and Insertion Unit provide a means for accurate high-frequency measurements of resistors, capacitors, and inductors — a variety of Adaptors permit connection to all commonly used systems.

Type 1602-B Admittance Meter $295

The Type 1602-B Admittance Meter is a versatile instrument for the rapid and accurate measurement of admittance, impedance or VSWR over a 20 to 1500 Mc range — direct reading between 41 and 1500 Mc. It can be used to match a load to a line, to compare directly the impedance of one circuit or component to that of another, as well as for direct impedance measurements.

★ Scales are direct reading and independent of both frequency and calibration of the detector

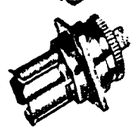
★ No sliding balance — conductance (or resistance) and susceptance (or reactance) adjustments are independent

★ Accuracy of both conductance and susceptance readings up to 1000 Mc is ± (3% + 0.2 millimho) over a 0 to 20 millimho range — from 20 to ∞ millimho, accuracy is ± (3$\sqrt{M}$% + 0.2 millimho); "M" is scale multiplying factor — above 1000 Mc, errors increase slightly — for matching, 3% accuracy to 2000 Mc

★ Admittance Meter is supplied with an Adjustable Stub and Variable Air Capacitor for use as susceptance standards, a 50-ohm Termination for the conductance standard, two Patch Cords for connection to detector and generator, a Panel Connector for the detector, and a wooden storage case.

874-B Basic Connector for rigid, 50-ohm, air-dielectric coaxial line $1.15

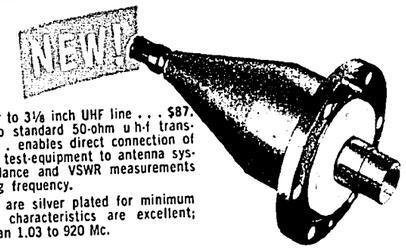
874-C Cable Connector for 50-ohm, 874-A2 Cable or equivalent ... $1.70



874-C8 for RG-8/U Cable $1.70

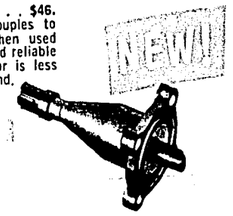
874-C58 for RG-29/U, RG-55/U, RG-58/U Cable $1.70

874-C62 used with RG-62/U (not matched) $1.70



874-P Panel Connector has adaptor and nut for panel mounting and fits 874-A2 Cable — 874-P8, 874-P58, 874-P62 are available for use with other cables. Price is $2.50 each, for any listed.

874-PB has flanges for panel mounting; 874-PB8, 874-PB58, 874-PB62 also available for other cables. $2.50 each



874-Y Cliplock rolls around mated connectors holding them securely in place. 10 Cliplocks $1.75

874-QU3 Adaptor to 3⅛ inch UHF line . . . $87. . . . couples to standard 50-ohm u-h-f transmission line . . . enables direct connection of any G-R coaxial test-equipment to antenna systems for impedance and VSWR measurements at the operating frequency.

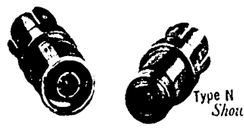
These elements are silver plated for minimum loss. Electrical characteristics are excellent; VSWR is less than 1.03 to 920 Mc.

874-QV2A Adaptor to 1⅝ inch line . . . $46. . . . similar to 874-QU3 except couples to 51.5-ohm v-h-f transmission line. When used with the Admittance Meter for rapid and reliable antenna testing, VSWR of this adaptor is less than 1.02 over the complete v-h-f band.

874-D20 Adjustable Stub with calibrated cm-scale indicating position of termination; 20 cm travel $11.00

874-D50 Adjustable Stub 50-cm travel; movable marker replaces scale $12.00

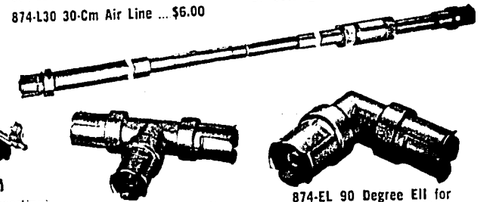
874-LA Adjustable Line (not constant impedance) with 25-cm travel $14.50



874-L10 10-Cm Air Line with 874-B Connector at each end $5.00

874-L20 20-Cm Air Line ... $5.50

874-L30 30-Cm Air Line ... $6.00



874-LK Constant-Impedance Adjustable Line is an air-dielectric, coaxial line which telescopes to change length; 50-ohm impedance remains constant along line regardless of setting $36.00

Type N *Shown*

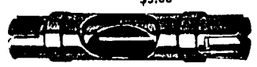
To Adapt to Type	Order G-R Type (Jack)	(Plug)	Price
N	874-QNJ	874-QNP	$3.75 & $4.5
C	874-QCJ	874-QCP	$4.75 & $6.
BNC	874-QBJ	874-QBP	$4.75 & $4.
UHF	874-QUJ	874-QUP	$4.00 & $4.
HN	874-QHJ	874-QHP	$6.50 & $6.

874-Z Stand for supporting coaxial systems; includes heavy base, horizontal and vertical rods and three universal clamps ..$15.00

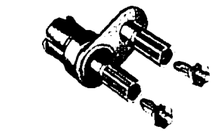
874-T Tee for connecting elements in shunt with a coaxial line $8.50

874-EL 90 Degree Ell for right-angle bends . $6.50

874-A2 Polyethylene Cable is 50-ohm ± 5%, double shielded with good flexibility . . . . 27c/ft for 25 ft or more; 50c/ft for less



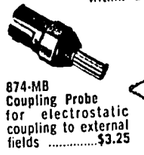
874-WN Short Circuit Termination for establishing reference conditions $2.25



874-WN3 has "short" 3-cm further away $2.75

874-JR Rotary Joint permits rotation of one section with respect to other $9.00

874-LR Radiating Line enables coupling to field within a line $7.50



874-Q7 Adaptor to G-R Type 774 Connector $3.75

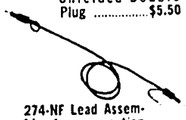
874-R20 Flexible Line— 3-ft. 874-A2 double-shielded cable with 874-C Connectors $6.00

874-R21 Patch Cord — 3-ft. single-shielded, 50-ohm cable with 874-C8 Cable Connectors $5.50

874-WO Open Circuit Termination with shielding cap $1.75

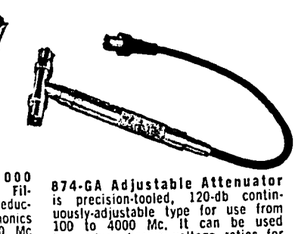
874-WO3 with "open" 3-cm further down the line $2.50

874-MB Coupling Probe for electrostatic coupling to external fields $3.25



874-MA Adjustable Coupling Loop can be clamped in any desired position $5.50

874-WM 50-ohm Termination provides impedance match to 50-ohm systems from dc to several thousand Mc ... $17.50

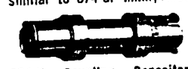


874-Q2 Adaptor for connecting Type 874 system to Type 274 Connector, binding posts, banana plugs . $3.50

874-Q6 Adaptor fits G-R Type 274-NF Lead Assembly $2.25

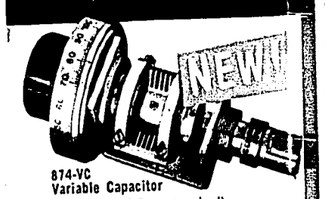
274-NF Lead Assembly for connection to 874-Q6 Adaptor, 274-ND Shielded Plug and 838-A Alligator Clips . $2.00

874-F1000 Low-Pass Filter for reducing harmonics above 1000 Mc $10.00



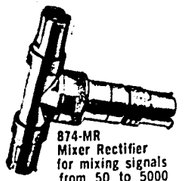
874-F500 Low-Pass Filter cuts off at 500 Mc $16.00

874-GA Adjustable Attenuator is precision-tooled, 120-db continuously-adjustable type for use from 100 to 4000 Mc. It can be used to produce known voltage ratios for attenuation measurements and for converting oscillators simply and inexpensively into signal generators when used with the Type 874-MR Mixer Rectifier $55.00

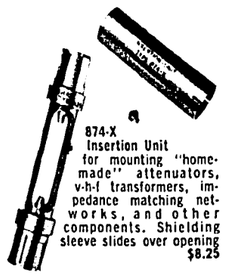


874-GF 20-db Fixed Attenuator with maximum power input of ½ watt and 0.5 db accuracy to 2000 Mc; useful to 5000 Mc $18.00

874-GG 10-db Fixed Attenuator similar to 874-GF $18.00



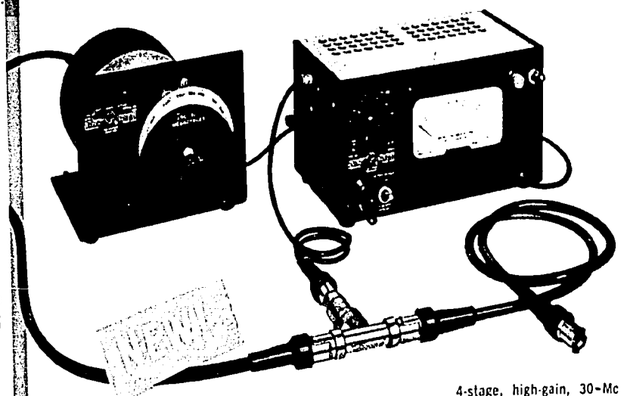
874-K Coupling Capacitor, blocks dc and low audio frequencies $8.50



874-VC Variable Capacitor
(Shielded Case supplied)

is a general-purpose tuning element for use at lower frequencies where adjustable stubs and lines are inconvenient because of their large physical sizes.

The unit features milled aluminum rotor and stator, high-temperature polystyrene insulation, precision ball bearings for smooth operation, an accurately-engraved dial drum and well-shielded enclosure. Capacitance variation is 56 $\mu\mu$f at 1 kc. Minimum capacitance setting remains essentially constant at 14 $\mu\mu$f to 200 Mc; maximum capacitance setting is 70 $\mu\mu$f to 50 Mc . . **$42.50**



874-MR Mixer Rectifier for mixing signals from 50 to 5000 Mc — minimum conversion loss. Used with a G-R Unit Oscillator and the Type 1216-A I-F Amplifier as an accurate high-frequency detector system $32.50

874-X Insertion Unit for mounting "home-made" attenuators, v-h-f transformers, impedance matching networks, and other components. Shielding sleeve slides over opening $8.25

874-M Component Mount for minimizing stray effects when measuring impedance of R-L-C components and other circuit combinations, from dc to 5000 Mc. Can be used with Slotted Line or Admittance Meter. 874-WN3 and 874-WO3 are supplied to simplify measurements .....$25.00, complete

Type 874-UB Balun . . . $75.
Shown with accessory 874-D20 Stubs and 874-Z Stand

a coaxial transformer which uses an artificial half-wave line for converting from balanced to unbalanced impedance. Range is 54 to 1000 Mc — instrument is tuneable for maximum accuracy.

Frequency Range (Megacycles)	Type (Two of each required)	Total Price
470 to 1000	874-D20 Adjustable Stubs	$22.00
350 to 525	874-D20 Adjustable Stubs and 874-L10 Air Lines	$32.00
275 to 380	874-D20 Adjustable Stubs and 874-L20 Air Lines	$33.00
225 to 280	874-D20 Adjustable Stubs and 874-L30 Air Lines	$34.00
170 to 280	874-D50 Adjustable Stubs and 874-L30 Air Lines	$36.00
174 to 216	874-VC Variable Capacitors and 874-L10 Air Lines	Price available on request
140 to 174	874-VC Variable Capacitors and 874-L20 Air Lines	
88 to 140	874-VC Variable Capacitors and 874-L30 Air Lines	
54 to 88	874-VC Variable Capacitors and 874-XL Series Inductors	

The Balun enables accurate impedance and VSWR measurements on balanced systems with readily-available unbalanced measuring equipment such as the G-R Admittance Meter and Slotted Line. When the Balun is used with the Constant-Impedance Adjustable Line and Admittance Meter, *balanced impedance* is read directly on the meter scales.

Supplied at no additional cost: Type 874-UB-P1 terminal for use with 300-ohm systems; a Type 874-WN3 Short-Circuit Termination and a Type 874-WO3 Open-Circuit Termination to facilitate tuning.

Type 1216-A Unit I-F Amplifier . . . . $365.

Shown above with 874-MR and 1209-A Unit Oscillator

the basic element in a high-frequency null detector for use with Slotted Line, Admittance Meter and other measuring equipment. The signal to be detected and a local-oscillator frequency are mixed in the Type 874-MR Mixer Rectifier to produce a 30-Mc difference frequency which is detected by this I-F Amplifier. With this system, any signal from 50 to 5000 Mc may be reliably and conveniently detected.

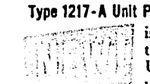
4-stage, high-gain, 30-Mc amplifier is terminated in rectifier and panel meter — modulation on signal is amplified by cathode follower with 0.4 Mc bandwidth and is available at binding posts for monitoring

90-db amplifier gain over 0.7 Mc bandwidth at 30-Mc center frequency — bandwith sufficiently wide to detect pulsed signals

High Sensitvity — less than 2 μvolts from 400-ohm source for 1% meter deflection; 50 μvolts for full scale deflection

Accurate built-in 70-db attenuator provides reliable measurement of relative signal levels — enables accurate high-frequency attenuation measurements

Two internal power supplies in Unit — one for the amplifier and one for the local oscillator to be used in detection



AVC provided for null-detection

Dimensions are 5⅛ x 10½ x 6⅜ inches; Net Weight is 8¼ lbs.

Price on request

Type 1217-A Unit Pulser . . . $225.

is a highly useful addition to the growing line of G-R Unit Instruments. When used with other Unit Instruments and Accessories, it permits . . . transient studies on a wide variety of networks . . . pulse modulation over the complete vhf-uhf television band . . . square-wave testing of amplifiers . . . and a wide variety of other pulse measurements.

Large Variety of Pulse Repetition Rates — 30, 60, 100, 200, 500 cycles, 1, 2, 5, 10, 20, 50, 100 kilocycles

Wide Range of Pulse Durations — continuous coverage from 0.2 μsec to 60,000 μsec

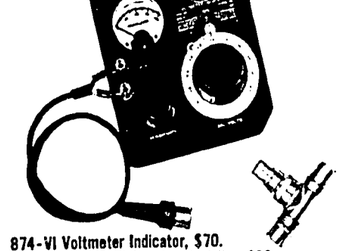
Fast Rise Time — 0.05 μsec; fall time is 0.15 μsec with open circuit shunted by 15 $\mu\mu$f and 1MΩ — top of pulse is flat to within 5% of maximum amplitude at all times.

Excellent Stability — no time jitter visible on scope

High Pulse Amplitude — permits use as time delay circuit — may be used directly on deflection plates of oscilloscope

Variable Pulse-Amplitude Control—permits zero to maximum settings

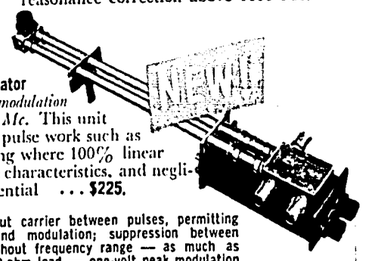
Output Voltage—20 v, on open circuit, for positive or negative pulses



Output Impedance—200 ohms for positive pulses, 1500-ohms for negative

Self-Contained Oscillator — unit is independent of external synchronizing signals

External Synchronization — where other repetition rates are required, 25 v rms is sufficient for locking from 0 c to 100 kc

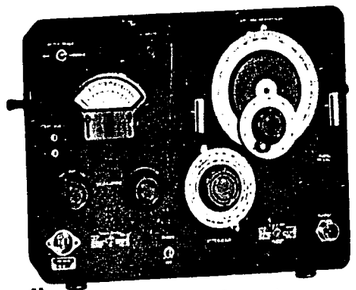


Power Supply — Type 1203-A Unit Power Supply is recommended

Dimensions are 10⅜ x 5¾ x 6¼. Net Weight is 5¼ lbs.

874-VI Voltmeter Indicator, $70.
and 874-VR Voltmeter Rectifier, $30.
Connecting Cord, $5.50

are used in conjunction to measure or monitor voltage, and for converting oscillators into 50-ohm signal generators. A crystal detector is used in the Voltmeter-Rectifier. The Indicator consists of a microammeter, sensitivity control and 60-cycle circuit for calibrating the crystal at any desired level between 0.1 and 2 volts. Measurement accuracy is ±0.05 volt. Frequency range, 15 to 2500 Mc subject to reasonance correction above 1000 Mc.

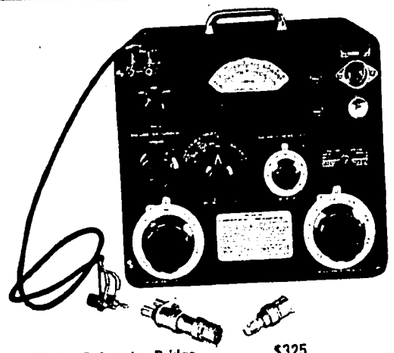


Type 1000-P7 Balanced Modulator
. . . for full 100% amplitude modulation of frequencies from 60 to 2500 Mc. This unit is particularly designed for pulse work such as radar and tv receiver testing where 100% linear modulation, good rise-time characteristics, and negligible incidental f-m are essential . . . **$225.**

Unique design bucks out carrier between pulses, permitting maximum double-sideband modulation; suppression between pulses is 60 db throughout frequency range — as much as 10 mv r-f output into 50-ohm load — one-volt peak modulation produces full r-f output from zero initial condition — price available on request.

Type 1000-P6 Crystal Diode Modulator . $40.
permits wide band, amplitude modulation of oscillators over a 20 to 1000 Mc carrier range. With this modulator, any standard tv-receiver's video signals can be used to "picture modulate" a signal generator operating at any vhf or uhf frequency . . . 50-millivolts r-f and 0.2 volt at modulation terminals produces 30% amplitude modulation; modulating frequencies may be any value from 0 to 5 Mc.

Since 1915
Manufacturers of Electronic Apparatus for Science and Industry



VHF and UHF Standard Signal Generator

Butterfly Tuning Circuit has wide range and no sliding contacts . . . frequency-calibration accuracy is ± 1%, direct reading . . . attenuator provides continuously-adjustable voltages from 0.5 μv to 1.0 volt, open circuit . . . internal 1-kc amplitude modulation; provision made for 30-cycle to 15-kc external modulation, adjustable from 0 to 50% with panel dial . . . panel meter indicates carrier output-voltage or modulation percentage.

Type 1021-AV,
50 to 250 Mc . $595.
Type 1021-AU,
250 to 920 Mc . $615.

These units are reliable, easily-operated power sources widely used in measurements with bridges, slotted lines and other coaxial equipment.

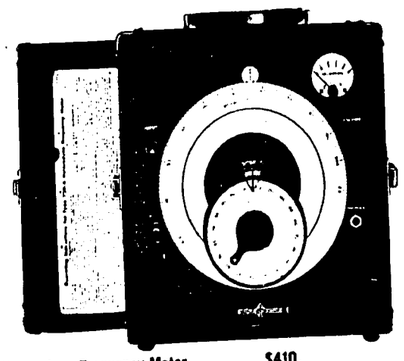
Type 1651-A Bolometer Bridge . . . $325.

a flexible bridge-circuit for measuring r-f power in the milliwatt range; useful in educational laboratories as well as in industrial research and development for innumerable applications. A variety of G-R Thermistor Units and Bolometer Holders are available for measurements from 0 to 500 mw. Other measurements can be made using a variety of power-sensitive elements with resistances from 25 to 400 ohms at frequencies up to 4000 Mc.

Unit oscillators

are compact and highly-efficient sources of power for maximum versatility. They are ideally adapted for use in industrial laboratory or college experimentation class. One Type 1203-A Power Supply and several oscillator sections permit maximum coverage at minimum cost.

Type 1211-A *Unit Oscillator* . *0.5 to 50 Mc* . **$295.**
Type 1215-A *Unit Oscillator* . *50 to 250 Mc* . **$190.**
Type 1208-A *Unit Oscillator* . *65 to 500 Mc* . **$190.**
Type 1209-A *Unit Oscillator* . *250 to 920 Mc* . **$235.**



Type 1203-A *Unit Power Supply, for use with Unit Oscillators* . . . . . **$40.**

Type 1213-A Unit Crystal Oscillator . . . $130.

a source of standard frequencies at very-high and ultra-high frequencies. The heart of the unit, the crystal, is plated, wire mounted to absorb shock, hermetically sealed, and has low temperature coefficient of frequency. (Type 1203-A Power Supply recommended).

When adjusted to Station WWV, instrument-stability of approximately one part per million can be relied upon for a number of hours.

Type 720-A Heterodyne Frequency Meter . . . $410.

a completely self-contained and portable instrument for rapid and accurate measurement of frequencies from 10 to 3000 Mc (fundamental range, 100-200 Mc.)

Measurement accuracy is ±0.1%. Many operating conveniences: butterfly tuned circuit avoids difficulties inherent in u-h-f tuning; adjustable panel-antenna eliminates need for direct connection to source under measurement; panel meter, internal speaker or terminals for head-phones available for detection.

METAL CLADS

For Printed Circuit Metal Clad Stock

Metal Clad laminates are finding wide usage in printed circuit applications. Printed circuit technique involves the printing of an electronic circuit upon a metal clad laminate surface using an acid resisting ink. In a subsequent acid etching operation, the unwanted metal foil surface which is not under the printed portion of the foil, is etched away leaving only the circuit pattern or, that part of the metal foil which is under the inked portion of the laminate. Write for technical bulletin.

Dilecto METAL CLADS

Printed circuits depend upon stable, uniform core material and Dilecto has years of proven insulation service (Dilecto is a laminated thermo-setting plastic made only by C-D-F from paper, cotton, glass or asbestos fabric base, or a mat base). Normally, only the better electrical grades of phenolic resin laminates, such as grades XXXP-24 and XXXP-26, are used for metal clad sheet stock. Other grades such as XXP-13, XXX-13, or GB-28M may be supplied with copper clad surfaces upon special order. Outstanding are copper clad C-D-F grades XXXP-24 and XXXP-26. These are hot punching grades with high insulation resistance. New C-D-F Catalog GF-54 gives complete data on these and other Dilecto grades including glass base metal clad laminates. Write for your copy today.

Teflon* METAL CLADS

Glass fiber cloth is coated with Teflon resin and laminated into C-D-F- GB-112T sheet stock. This base withstands high heat (200°C. maximum operating temperature) with the dissipation factor and dielectric constant extremely low over a wide frequency range. The adhesive film used to bond the metal to the Teflon laminate, does not degrade the inherently good electrical properties of the core material. GB-112T has practically zero water absorption, so a METAL CLAD with this core offers consistent high insulation resistance with excellent dimensional and electrical stability.

* Du Pont Trade Mark.

METAL CLAD Surfaces

Copper foil (usually .0014" or .0028" thick) is bonded on one or both faces of the sheet grade of Dilecto selected. The foil used is a special grade of electrolytic deposition copper particularly adoptable for cementing onto laminated materials. An adhesive film is placed between the metal and the Dilecto, and cemented during the pressing and curing cycle. When closer tolerances are required, C-D-F sands the Dilecto to the required thickness before bonding. Aluminum or other metal alloys may be supplied.

Better Bond Strengths

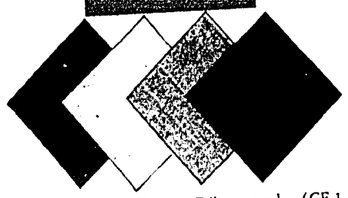
One of the most important physical properties of a metal clad product is its peel strength, the pounds pull required to separate the foil surface from the core material. Working with years of laminating know-how, C-D-F has been successful in obtaining the following average test values for its METAL CLAD sheet stocks:

	Lbs. pull per 1" wide
XXXP-26 plus .00135" copper	5 to 8
XXXP-26 plus .0027" copper	7 to 10
XXXP-26 plus .0015" aluminum	9 to 12
GB-112 Teflon plus .00135" copper	6 to 9

Sheet sizes: Dilecto grades—38 x 38", 38 x 42"
Teflon grades—16 x36"

MICABOND

Only the finest mica splittings are used in Micabond tapes, plates, tubes and fabricated parts. They are placed for completely leakproof coverage, with strong binders used. Available in a wide range of sizes with many different backings including fiberglas, silk, cellophane. cotton and paper. Micabond Tapes are hand laid; flexible sheets are both hand and machine laid; both retain their electrical insulating properties at elevated temperatures.



New . . . Micabond Fiberglas! When you need maximum reliability under high temperature service, resistance to mechanical abuse, coupled with the maximum safety factor, specify Micabond Fiberglas sheets, tapes, wrappers. Composed of India Mica splittings, bonded with flexible resin and faced on one or both sides with impregnated Fiberglas cloth, these new C-D-F products are superior to varnished fiberglas combinations in deeply imbedded "hot spot" applications. Write for technical bulletin and samples.

CONTINENTAL-DIAMOND FIBRE CO.

MOLDED AND LAMINATED PLASTICS—FOR ELECTRICAL INSULATION...

LAMINATED PLASTICS

DILECTO

Dilecto, a laminated phenolic material, meets the need for a non-metallic lightweight insulating material that is moisture resistant, good electrically, strong and adaptable to all fabricating operations. Some grades have exceptionally high mechanical strength—tensile, flexural, impact; others have high dielectric strength, high insulation resistance, high arc resistance and low loss factor.

Dilecto is a laminated material made from a base of either cellulosic paper; heavy or fine weave woven cotton fabric or mat; asbestos paper, woven asbestos fabric or mat; woven glass fabric or mat; and is coated with a synthetic resin.

The selection of the proper base material, the proper resin in the correct proportion, is C-D-F's job, but the end user must realize how important it is that he fully understands what dividend results can be gained mechanically, and electrically, and from a cost standpoint, by getting the very best C-D-F material for the project. Here is a brief, yet complete listing of Dilecto sheet grades, each one with a combination of proven characteristics built into the material for the specific job.

POST-FORMING: Certain Dilecto grades (CF-1, XF, GB-SF, MEC-1F) may be formed to special shapes by heating and placing in an inexpensive cold mold. The thermoelastic properties of these Dilecto laminates open many production and design opportunities. Already widely used by the aircraft industry, Post-Forming Dilecto merits full investigation by every alert manufacturer. Write for complete C-D-F engineering service.

DILECTO ROLLED OR MOLDED TUBING finds wide usage in radio and electrical equipment because of excellent insulating and mechanical properties. Impregnated paper or fabric is rolled on a mandrel between heated pressure rolls, then oven baked or press cured in a heated mold to set up the resin.

SHEET GRADE CLASSIFICATIONS (Rod and Tubing similar to sheet stock)

X For mechanical applications when electrical properties are secondary.
P For punching (paper-based grades).
XX For electrical applications requiring mechanical strength.
XXX For high humidity applications with minimum cold flow.
L For mechanical applications requiring fine machining.
C For mechanical applications requiring toughness plus impact strength.
For chemical and special applications.
CE and LE For electrical uses requiring greater toughness than paper-based grades.
GB For applications requiring heat resistance and high mechanical strength. For high heat applications.

Note: Various C-D-F grades, identified by numbers affixed to the grade classification, are available. Ask for catalog GF-54.

INSULATION

TEFLON

OUTSTANDING PROPERTIES

HEAT RESISTANCE: Due to the non-flammability and high heat resistance of Teflon,* it easily meets both Class B and Class H, AIEE standards for maximum hot spot insulation temperature. Teflon coated glass fabric laminates withstand 250°C. continuously and up to 300°C. intermittently. One factor which influences the heat resistance of Teflon is that there is no apparent degradation from oxygen, which has a definite degrading effect on silicone materials.

* Du Pont Trade Mark

MOISTURE RESISTANCE: A Teflon laminate has practically zero water absorption and its electrical properties are little affected after long exposure to high humidity. Teflon is unaffected by fungus and temperature changes. Not only has it lower moisture absorption than any other laminate known, but it tends to repel water . . . . retaining high surface insulation resistance properties even under extreme humidity conditions.

DIELECTRIC STRENGTH: The dissipation factor and dielectric constant of Teflon laminates are both extremely low over a wide frequency range. From 60 to 100 megacycles, the dissipation factor range is between .005 to .0005 and the dielectric constant ranges from 2.8 to 2.5 when measured in a field perpendicular to laminations. As corona will slightly degrade Teflon, care should be taken in designing parts used at voltages over 2500. Sharp corners, and other contributing factors to corona should be avoided.

CHEMICAL INERTNESS: Resistant to hot corrosive salts and most concentrated acids. Pure Teflon is unaffected by all known chemical agents, excepting molten alkali metals and, under special conditions, fluorine and chlorine trifluoride. Glass supported Teflon, when exposed at cut edges, is affected only by those chemicals which attack glass. Otherwise, its properties remain the same.

TEFLON TYPICAL PROPERTY VALUES COMPARED WITH GLASS-BASED LAMINATES

	TEFLON (Unsupported)	TEFLON GB-28T (teflon resin)	DILECTO GB-112S (Silicone resin)	DILECTO GB-28M (Melamine resin)	DILECTO GB-112D (Phenolic resin)

A. Sheet stock, shear strips, punch. B. Sheet stock, shear, punch blank, gang saw notches. C. Sheet stock, shear strips, punch blank, mill notches.

SHEETS • TUBES • RODS • RECEPTACLES

Vulcanized Fibre is a wonderful material if you know where to use it and how to buy it. We suggest on many jobs that it's best to do the fabrication and forming in C-D-F's shops. Why? Because C-D-F knows how. Since 1895 the company has put fibre to work in everything from buggy axle bushings to metal clad radio parts. The handling of thousands of set-ups for high speed, low cost production runs gives C-D-F an "experience bank" to draw from. Shop supervisors have a wealth of short cuts, little tricks that result in lower prices for you. They know the material and its peculiarities.

TOUGH, RESILIENT, STRONG

How long has it been since you examined the unique properties and wide range of C-D-F fibre grades? Vulcanized Fibre is arc resistant, mechanically strong, non-corroding, half the weight of aluminum. Repeated moistening and drying in forming insignificantly alters the nature, structure or quality of the fibre.

Since C-D-F has their own paper mill, uniform, quality control is made possible. Special grades are more easily developed.

A BIG, RELIABLE SOURCE

C-D-F does business with the largest tonnage users of sheet, rod and tube fibre in the world. This means good deliveries, good prices, reliable products for every new customer. You deal with a materials engineer, a C-D-F man who knows how to give you the most value in Diamond Vulcanized Fibre. If you want to improve design, simplify purchasing, speed production, use Diamond Fibre and the facilities of C-D-F. Write for catalog, free test samples, or send us your print for quotation.

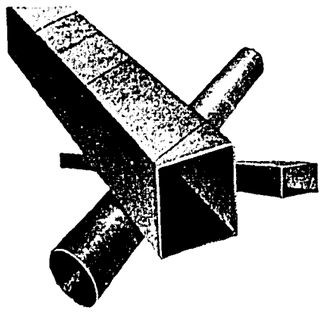
RESIN-IMPREGNATED FIBRE

VULCOID

Only C-D-F supplies Vulcoid in sheets, tubes, rods, and fabricated parts. Made from Diamond Vulcanized Fibre that has been uniformly impregnated with a special resin, Vulcoid is a material approved and identified by the Underwriters' Laboratories as Class A Insulation. Natural greenish-tan in color, it is economical, easy to machine and punch. Property-wise, Vulcoid is an intermediate grade between Commercial Fibre and XX phenolic Dilecto.



USES: (requiring arc resistance and mechanical strength)—contact and connectors panels, knife switch arms and guides, arc deflector spacer bushings; (requiring dielectric strength and moisture resistance)—electrical fixture insulation, wiring devices, plugs, receptacles; (requiring moisture and arc resistance)—motor and transformer lead bushings and terminal blocks.

CONTINENTAL-DIAMOND FIBRE CO.

MOLDED AND LAMINATED PLASTICS....FOR THE ELECTRONIC INDUSTRY

ENGINEERING UNLIMITED

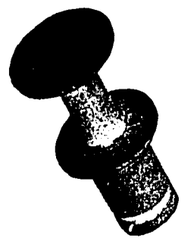
SPIRAL TUBING

GOOD DIELECTRIC STRENGTH • LOW DIELECTRIC LOSS PROPERTIES
GOOD MECHANICAL STRENGTH & MOISTURE RESISTANCE

C-D-F is a dependable source of supply for all of your coil form spiral tubing needs. Uniform, high product quality is maintained by rigid standards of manufacture. C-D-F offers you fabricating skill, backed by exacting technical and inspection control. A recent C-D-F development is Grade 5 Constant Torque Tubing for use in coil forms. After the threaded iron tuning core is inserted and finally adjusted, you obtain the same stable torque rating. Constant Torque features: exact internal threading . . . every thread engaged. 3-point contact with core prevents binding and permits positive tuning and re-tuning. Outer surface of tube has no weak spots, no external embossing to cause cement leakage. Available in lengths up to 14" to take .248" to .250" core with 28 threads per inch and also 6-32, 8-32 and 10-32 screw sizes. Write for samples. Grade 5 Tubing is also custom-fabricated by C-D-F in conventional shapes to accommodate other sizes of tuning cores. C-D-F produces spiral tubing in grade to meet most requirements. Use the Grade Selector Chart when requesting samples and additional information. Write for folder ST-53.

AVAILABLE GRADES

IMPREGNATED



1 General Electrical and Mechanical Grade. ○
1A Electrical and Mechanical Grade—Special Punching. ○
2 Mild Stapling, Riveting, and Post Forming Quality. ○
2A Intermediate Fabricating and Stapling Quality. ○
3 Severe Stapling, Riveting, and Post Forming Quality. ○
5 Constant Torque and Formed-to-Shape Coil Form Tubing. △
6 Special for High Humidity Applications. ○
6A Extra Hard, High Strength Tubing. ○
7 Soft Varnished Kraft Tubing. ○ □
7A Hard, Rigid Rectangular Tubing. □
8 Varnished Diamond Insulation—Tubing. ○
9 "Deflection Coil" Tubing. ○
10 Larger Size, Heavy Wall Tubing for Mechanical Uses. ○

UNIMPREGNATED

21 Plain Kraft Paper Tubing. ○ □
22 Plain Diamond Insulation Tubing. ○
23 Plain Chipboard Tubing. ○

○ Round
△ Formed (fluted shape)
▽ Formed and Notched
□ Square, Rectangular

SPOOLS SMALL, ECONOMICAL

A radio coil manufacturer wanted small spools, less costly than those machined down from round stock, much stronger than molded bobbins. C-D-F supplied this: a rolled Dilecto tube is grooved on one end . . . stepped down in the middle . . . then notch cut on the other end for a flush fit. C-D-F uses a special adhesive to bind the three parts (the body and two Dilecto spool heads) together. The assembly is sufficiently strong to withstand the outward pressure of the wire. The spool never loses it's head! Because Dilecto is resistant to high heat and high humidity, many corrosive and chemical actions, it can be used for many coil and electronic applications.

L. L. Constantin & Co.

NEW INDICATING FUSE POSTS

FOR 3AB & 3AG FUSES

Fulfilling a wide need for a fuse post which indicates by means of a light when a fuse is blown, Littelfuse has developed a line of Indicating Fuse Posts in ratings up to 15 amperes and 500 volts. In normal use the indication light, located in the extractor knob, is shunted by the fuse and does not light. When the fuse blows, the open circuit voltage is thrown across the lamp which then lights, indicating that the fuse is blown.

DESIGN FEATURES

1 Smallest on the market. 2⅜" overall, ¾" above panel, 1⅝" below panel, including the solder terminals.

2 The most positive indication. Light is completely above panel to provide 360° indication from any point.

3 Rugged. Molded black high strength bakelite body; tough translucent nylon non-breakable knob of fingertip design. No sharp points or knurls.

4 Can be manufactured to meet government requirements of water-proofing and fungus resistance.

5 Mounts on 1-1/16" minimum center to center, dimension, knob, 15/16 OD, body mounts in ⅝" diameter "D" non-turning hole; ⅝-18 thread on body.

6 Post extracts fuse with knob removal.

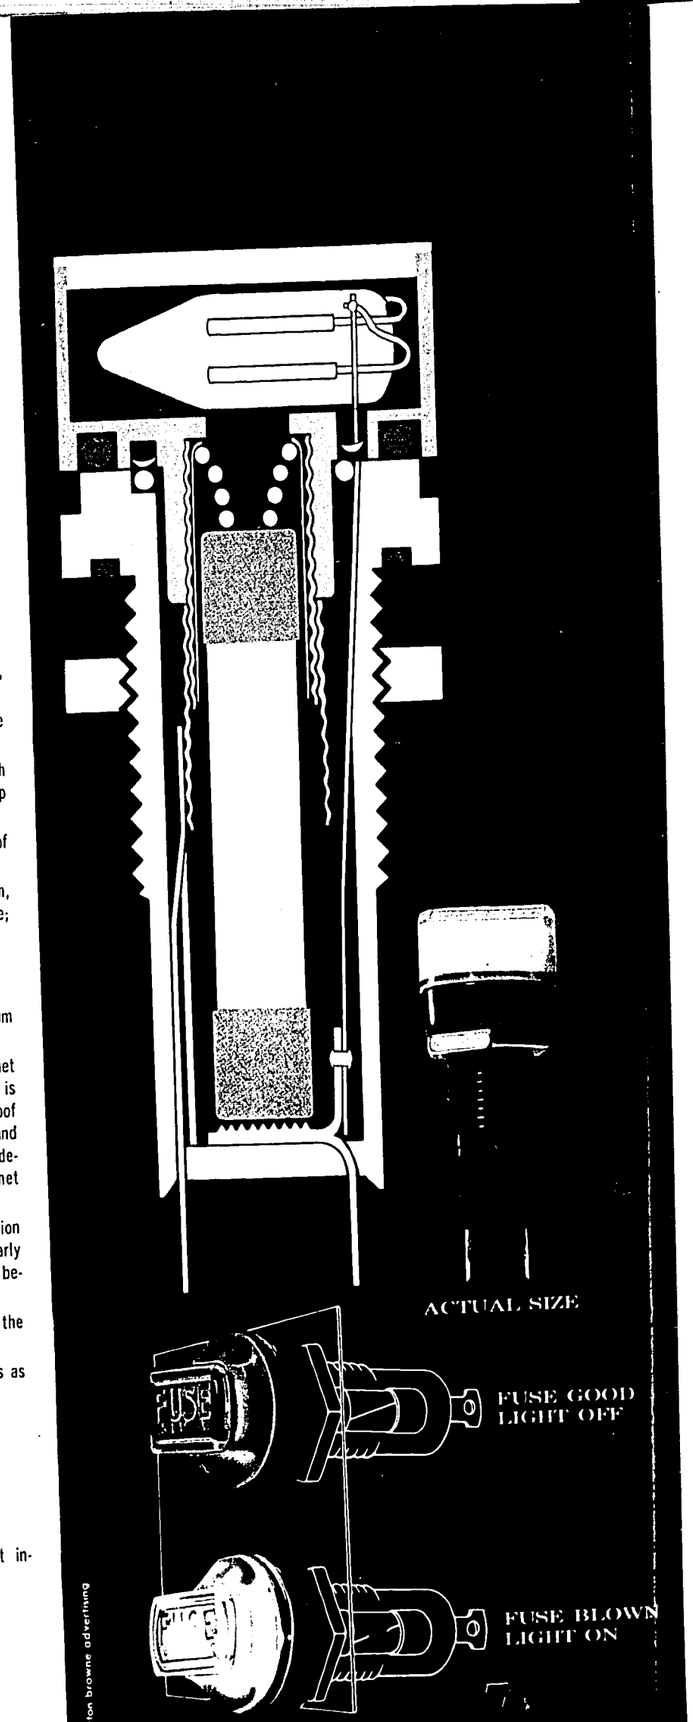
7 Contact pressure on fuse–5 to 8 lbs.

8 Since the lamps are in shunt with the fuse, the minimum rating ¼ ampere, maximum 15 amperes as above.

9 For standard commercial application a half twist bayonet type of lock between knob and body will be used. Where it is desirable and necessary that the unit be splash and/or water-proof from front panel, "O" rings will be added between the knob and the body and between the body and the panel, and the locking design will be changed to a threaded screw type instead of the bayonet style.

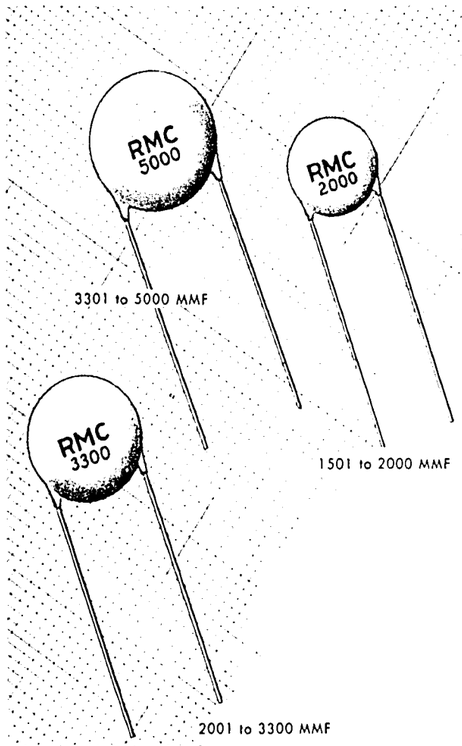
10 Identification. In order to provide positive identification of each different voltage range, the knob and the body will be clearly marked. This obviates the necessity for non-interchangeability between ranges, and/or color coding.

11 Both solder terminals protrude from the bottom of the unit for easier assembly in equipment.



The post will be available for six different voltage ranges as follows:

6- 8 volts using an incandescent lamp.
10- 32 volts using an incandescent lamp.
32- 48 volts using an incandescent lamp.
90-130 volts using a neon lamp.
135-250 volts using a neon lamp.
260-500 volts using a neon lamp.



The variety of voltage ranges provides maximum light intensity and long life. Lamps protected by series resistors.

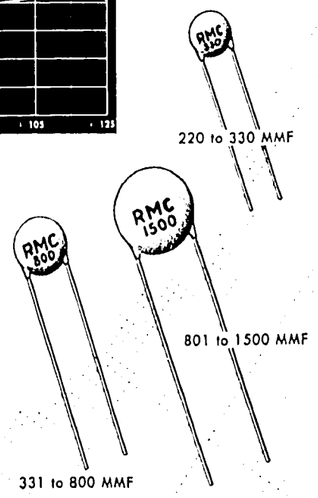
investigate the advantages of Type JL RMC DISCAPS®



More and more of the leading electronics, radio and TV manufacturers are specifying Type JL DISCAPS as the ideal cost saving replacement for paper or general purpose mica capacitors. In addition to a lower initial cost, Type JL DISCAPS feature smaller size and greater mechanical strength to effect additional economies in production assembly.

This series is manufactured in a wide range of capacities and offers exceptional stability over an extended temperature range. The maximum capacity change between −60° C and +125° C is only ±7.5% of capacity at 25° C. Type JL DISCAPS have a standard working voltage of 1000 V.D.C. and are available in tolerances of ±10% or ±20%.

Our engineers are prepared to work with you on problems requiring standard or special types of ceramic capacitors, write today.

HIGH VOLTAGE DISCAPS
for yoke and other applications

RMC DISCAPS assure the voltage safety factor required in deflection yoke or special electronic applications. These RMC high voltage DISCAPS are rated at 2000, 3000, 4000, 5000, and 6000 volts DC.

Now available in any capacity between 5 MMF and 10000 MMF, their smaller size and lower initial cost offer definite production ease and overall savings.

If you want proof that DISCAPS are the outstanding ceramic capacitors write us about your specific requirements and we will forward samples.

Always a pioneer in this field, Winchester Electronics initially established the use of mineral-filled melamine for insert bodies and gold plating over silver plating on contacts, having long realized their values. Today, these principles of design and manufacture are widely accepted in industry as those necessary to meet quality requirements.

Many years of engineering experience and manufacturing skill are the basic component of every connector bearing the Winchester Electronics name . . . plus these features:

POLARIZATION: *All connectors have positive polarizing features that make incorrect mating impossible.*

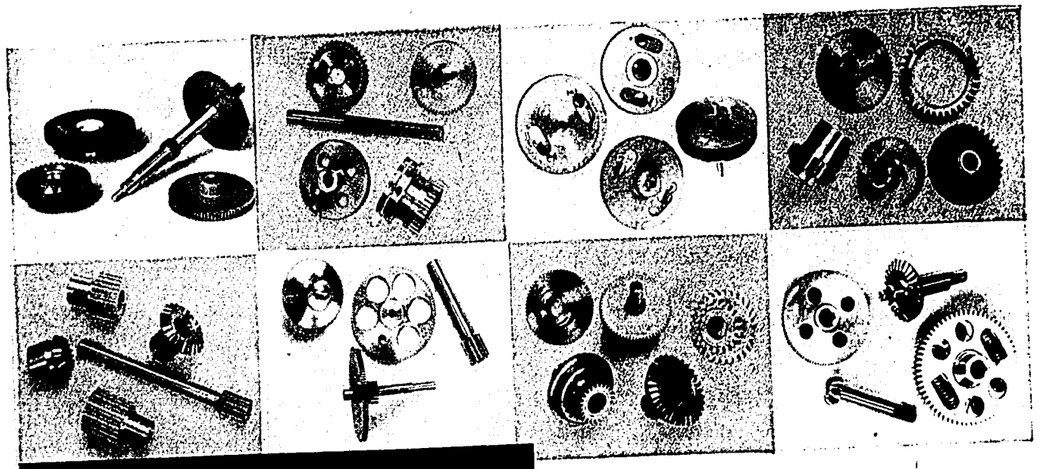
SELF-ALIGNING: *Individually floating contacts assure proper play for self-alignment.*

WIPING ACTION *of contacts insures positive electrical contact at all times.*

MOLDED MELAMINE BODIES: *Mineral-filled (in accordance with MIL-P-14, type MME) provide high arc and dielectric resistance as well as mechanical strength. One-piece molded bodies eliminate unnecessary creepage paths and reduce the number of moisture and dust pockets.*

PRECISION MACHINED CONTACTS: *Pins from brass bar and sockets from spring temper phosphor bronze bar are gold plated over silver for consistent low contact resistance, prevention of corrosion and ease of soldering.*

Winchester Electronics, Inc. Products and Designs are Available Only From Winchester Electronics, Inc.



Many features are covered by our Patents: Nos. 161900, 162792, 2411861, 2466370, 2513080, 2526325, 2532538, 2633482 and 2659872.

Write or phone our Sales Department for data on connectors listed here, or many other standard and special types available . . . or for solutions to difficult connector problems.

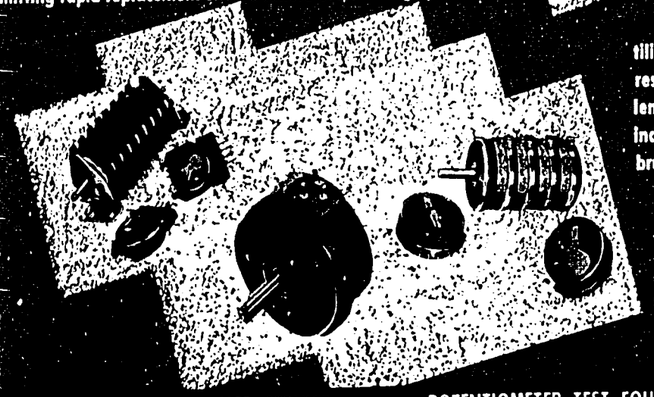
TIC precision potentiometers

LOOK TO TIC for the most complete line of advanced PRECISION POTENTIOMETER designs for every application. TIC engineering means outstanding potentiometer performance in your system. The extreme variety of standard models available guarantees the optimum specifications and dimensions, whatever your potentiometer requirement in computors, control systems, and precision instrumentation.

potentiometers are available in miniature and sub-miniature sizes. Type RVH1 has been especially designed for operation at high ambient temperatures. All designs feature rugged construction and excellent stability under adverse environmental conditions.



potentiometers, Type RFT, feature infinite resolution for super-fine trimming adjustments in instrumentation. Complete shaft rotation represents less than 4% of available resistance variation. Convenient size and shape permit stacking of Metfilm unit for optimum use of limited panel space.

potentiometers, type M10T, feature high electrical accuracy resulting from servo control of resistance windings. One piece construction of base and mounting surfaces yields precise, rugged unit. Anodized aluminum cover provides sealed enclosure but does not support working parts. Spring loaded ball bearings housed in single bore provide precise, rigid shaft support with very low rotational friction. Universal mount offers choice of servo or tapped hole mounting.

construction, available in 2 inch and 1⅝ inch diameter potentiometers, allows assembly of multi-gang units as required by user, greatly simplifies construction of "breadboard" circuitry in experimental work. Servicing of large systems is facilitated by use of unitized potentiometers, permitting rapid replacement should failure occur during operation.

precision potentiometers ranging from ⅞" to 3" in diameter feature high linearity and resolution, together with long life and low noise. Rugged one-piece construction of aluminum base and close mechanical tolerances of mounting surfaces assure realization of electrical accuracy in external system. Standard TIC potentiometers will meet applicable MIL specifications for humidity, salt spray, shock, vibration, and corrosion resistance.

functional outputs are available in most standard TIC potentiometers, including sinusoidal, logarithmic, and square laws—and many others. In addition, TIC engineers will design highly accurate non-linear potentiometers based on mathematical data submitted for special applications.

potentiometers, Type RVT, are actuated by rectilinear rather than rotary motion of shaft. Wide range of resistance values can be furnished in units with stroke lengths from ½ inch to 12 inches. Special design permits inclusion of up to three resistance elements with separate brush arms and take-offs in a single housing.

types ST18 and STC18 ball-bearing potentiometers are designed to conform to the latest industrial standard potentiometer dimensions. Now high electrical and mechanical precision can be achieved within a minimum volume. Type STC18 embodies convenience of unitized construction. Also available with plug-in type mounting as type RVBC 1⅝.

GENERAL SPECIFICATIONS

ELECTRICAL

Coin-silver overtravels: 10° nominal at each end of winding.
Taps: Available at desired points.
Rated temperature coefficient of resistance wire: 0.002% per °C.
Ambient temperature range: −55°C to +80°C (to +145°C for RVH1).
Equivalent noise resistance: 140 ohms, maximum.
Dielectric strength: 1000V DC breakdown test, 1-sec duration. except RV3, RVLL3 (2000V DC)

MECHANICAL

Housing: Precision-machined aluminum with corrosion-resistant Alumilite finish (except Bakelite RV3, RVLL3 and stainless-steel RV½)
Mechanical rotation: 360° continuous; limit stops available.
Starting torque: Less than 1 oz-in (1½ oz-in for RV3, RVLL3, ½ oz. in for ST18, STC18).
Life: 1 million operations at 60 rpm, or less.

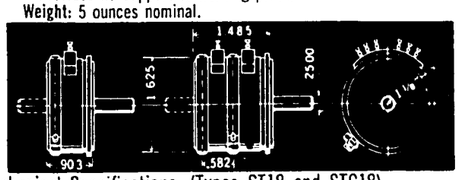
TIC ADVANCED PERFORMANCE MULTITURN POTENTIOMETERS

Servo potentiometer Type M10T servo-corrected for .025% linearity at low cost. Winding may be corrected for resistive loads of at least twenty times the potentiometer total resistance. Extraordinary mechanical precision and high electrical accuracy combine with unique method of servo-controlled winding of the resistance element to produce a new concept in multiturn precision potentiometers.

Electrical Specifications



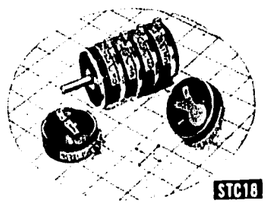
Resistance Range: 1000 ohms to 10,000 ohms ± 5%.
Independent Linearity: 0.05% standard, 0.025% or better, special.
Effective Electrical Angle: 3600° +1° −0°.
Power Rating: 5 watts at 40°C derated to zero at 80°C.
Leakage Resistance: Terminals to shaft 50 megohms minimum 500 volts DC.
Voltage Breakdown: All terminals shall withstand 1000 volts (rms) AC to shaft.
Ambient Temperature Range: −55°C to +80°C.
End Coil Resistance: .025% of total resistance (maximum).
Equivalent Noise Resistance: 100 ohms maximum.
Temperature Coefficient of Resistance Wire: .00002 per °C.

Mechanical Specifications

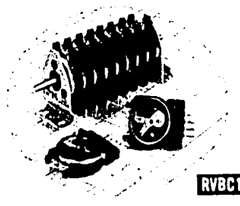
Base and Bearings: One piece machined aluminum base houses spring-loaded ball bearings in a single through bore.
Mounting: Universal type offers choice of servo or tapped hole mounting.
Mechanical Rotation: 3660° ±2.5° limited by rugged lead screw stops which withstand 100 inch pounds applied torque.
Maximum Starting Torque: 1.3 inch ounces at 20°C.
Terminals: Gold-flash, blind solder pot.
Enclosure: Corrosion-resistant stainless steel cover, bonded to base to exclude dirt, moisture, and corrosive atmosphere. Provides no support to working parts.
Weight: 5 ounces nominal.

TIC STANDARDIZED BALL BEARING PRECISION POTENTIOMETERS

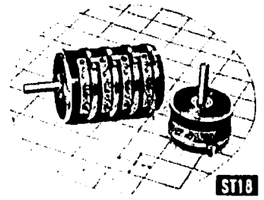
Type ST18



Types ST18 and STC18 feature compactness, ball bearings for low friction, and high electrical accuracy. Linear and non-linear windings are available. Servo-mount dimensions conform to latest industrial standards. Type STC18 is electrically identical to Type ST18 with unitized construction to permit rapid assembly and dis-assembly of ganged units by user. Also available with plug-in type mounting as Type RVBC1-5/8.



Electrical Specifications: (Types ST18 and STC18)



Resistance Range: 100 ohms to 100 K ohms ±5% standard, ±1% special.
Independent Linearity: 0.5% of total resistance standard, to 0.2% of total resistance special.
Winding Angle: 320° ±2° standard. ±0.5° special. Non-standard winding angles available.
Power Rating: 3 watts at 25°C derated to zero at 80°C.
Ambient Temperature Range: −55°C to +80°C.
Temperature Coefficient of Resistance Wire: .00002 per °C.
Taps: Available at specified locations on the resistance winding.
Equivalent Noise Resistance: 140 ohms maximum.
Voltage Breakdown: 1000 volts DC all terminals to shaft.

Mechanical Specifications: (Types ST18 and STC18)

Housing: One-piece machined aluminum base with black alumilite, corrosion-resistant finish.
Bearings: Two ball bearings for low rotational friction.
Mechanical Rotation: 360° continuous or limited by stops if specified.
Maximum Starting Torque: 0.5 ounce inches per section.
Ganging:
Type ST18 units may be ganged on a straight through shaft, using one-piece stainless steel clamp rings which permit precise phasing of ganged units.
Type STC18 features unitized construction allowing user to assemble multi-gang units with ease. Spring-loaded drive-arm joins sliders of successive sections, limiting backlash to 0.06° per ganged section.
Weight: 3 oz. for single section, 1 oz. per additional section.

STC18

RVBC1-5/8

ST18

TIC PRECISION POTENTIOMETER TEST EQUIPMENT

For the measurement of potentiometer noise, linearity, and non-linear conformity. **Write for complete specifications.**

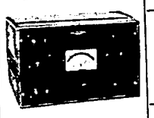
Type 394-A PONOGOMETER® (Potentiometer Noise Tester)

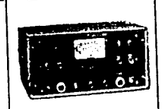
A precision potentiometer noise tester designed for laboratory and production control in the manufacture of single or multiturn potentiometers. Monitoring the transient contact noise resistance appearing between the wiper and resistance element, both audible and visual indications are given when threshold level is exceeded.

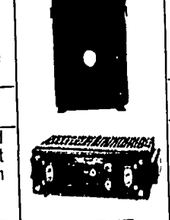
Range: Equivalent Noise Resistance threshold level adjustable from 10 to 5000 ohms. Lower levels can be set up by means of accessory equipment.
Wiper Exciting Current: Constant 1 milliampere. For other values accessory current sources can be set up.

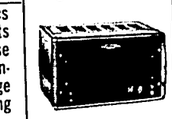
TIC PRECISION POTENTIOMETER HANDBOOK AND CATALOG

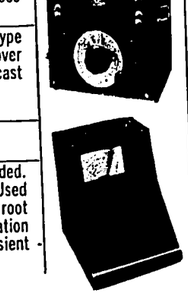
A truly authoritative reference on the theory, design, performance, and application of precision potentiometers. Handbook includes detailed and illustrated engineering description of











- Potentiometer terminology
- Circuits for optimum potentiometer adjustment
- Non-linear loading techniques
- Causes of resolution and residual noise
- Potentiometer design and construction procedures

and many other pertinent subjects. Catalog section, included under same cover as handbook, lists complete specifications on standard TIC potentiometers and test equipment. Loose-leaf format permits the accumulation of technical information on new developments in potentiometer design and new TIC models as they are introduced. Price: $2.00 per copy, (including subscription to future material.)

TECHNOLOGY INSTRUMENT CORP.

			PHASE ANGLE RANGE
MEASURING	**PRECISION**		
Type 320-AB Phase Meter PROVEN PERFORMANCE EASE OF READING SIMPLICITY OF OPERATION	For direct 0-360° Phase angle measurements. Used in conjunction with Audio Facilities, Ultrasonics, Servo-mechanisms, Geophysics, Vibration, Acoustics, Aerial Navigation, Electric Power Transformation, Signalling, and mechanical applications of Torque Measurement, Dynamic Balancing and Printing Register.		0-360° without ambiguity
Type 322-A Precision Phase Meter HIGH PRECISION EXTREME ACCURACY VERSATILITY	Phase measurements from 0-360° without ambiguity. Highly stable and sensitive circuitry plus precision meter scales provide utmost accuracy of measurements, even with most complex wave-forms. Used in similar applications to type 320-AB where extreme precision is required.		0-360° without ambiguity
Type 324-A Video Phase Meter WIDE FREQUENCY RANGE HIGH ACCURACY DIRECT READINGS	For rapid and accurate measurement of Phase Angle through the Video Range. Used in Phase Equalizing Networks, Single Sideband Video Translation, Reactance Tube Modulators, Phase Shift Oscillators, Chromaticity Sub-Carriers TV, Neutralization Circuits, Broadband Negative Feedback Circuits, Polyphase Selectivity Methods, Antenna Array Phasing, and Phase Delay Line Measurement.		0-360° without ambiguity
Type 704-A Secondary Phase Standard EXCELLENT STABILITY HIGH INPUT IMPEDANCE NEGLIGIBLE DISTORTION	Precision electronic Phase Shifter. Shifts phase of sinusoidal signal by any angle 0-360° in four 90° ranges. Used for measurement with Phase Shifting Capacitors, Time Base Circuits, Transmission Networks, Multi-phase Voltage Rotation, Phase Detection Circuits, AC Thyratron Control, Feed Back Amplifiers, Servo Systems, Synchros, Resolvers, Power Factor, Gyros, and CRO Sweeps.		0-360° Variable
Type 706-A Ultra-Sonic Phase Standard HIGH PRECISION EXCELLENT STABILITY SIMPLICITY OF OPERATION	Generates two voltage signals whose phase difference is known to ±0.1°. Multiple frequency Lissajous pattern is used for precise indication of angles established. Operation is at a single predetermined frequency specified by the user. For precise calibration of radar ranging circuits and phase detectors as well as for phase measurements.		0-360° Variable
Type 7000-A Primary Phase Standard LISSAJOUS PRESENTATION EXTREME ACCURACY CALIBRATES PRECISELY	Generates two sinusoidal voltages whose phase relationship may be determined with ease to within ±0.05° or better. Multiple frequency Lissajous pattern presentation is independent of calibration of precision phase shifter. Used in highly precise calibration of phase sensitive devices and for phase measurements in amplifiers, synchros and resolvers.		0-360° Variable
AMPLIFIERS			FREQUENCY RANGE
Type 500-A Wide Band Decade Amplifier WIDE BAND RESPONSE HIGH STABILIZED GAIN ZERO PHASE SHIFT	Featuring high input impedance, low output impedance, and compactness, this general purpose laboratory instrument provides 20 volts output over wide frequency range with stabilized gains of 10, 100, and 1000.		5cps—2 mc on gain 10 5cps—1.5mc on gain 100 5cps—1 mc on gain 1000
Type 501-A Compressor Amplifier WIDE INPUT RANGE UNIFORM OUTPUT NEGLIGIBLE DISTORTION	Accepts an input signal of varying amplitude and provides output signal having the same waveform, of nearly constant amplitude. Operation is effective over a large input dynamic range and a wide frequency range with essentially zero distortion.		100cps to 1.0mc for compression
Type 511-A Power Amplifier NEGLIGIBLE DISTORTION HIGH VOLTAGE OUTPUT LEVEL PHASE SHIFT COMPENSATION	Low distortion, low noise and excellent phase characteristics throughout the frequency range 50cps-50kc. Four outputs available to match various loads (5, 25, 200 or 1200Ω). Phase compensation circuit permits overall phase shift to be maintained at a constant value with varying gain. Output voltage up to 120 volts into a 1200Ω load. Operates into loads varying from pure resistance to pure reactance.		50cps to 30kc (down 1 db at 50kc)
OSCILLATOR			FREQUENCY RANGE
Type 410-A RF Oscillator EXCELLENT STABILITY HIGH OUTPUT LEVEL LOW OUTPUT IMPEDANCE	12 volts available from 100 kc to 10 mc. with minimum distortion. Up to 30 volts obtainable. 1000 cycle modulation provided. Used as a signal source for radio frequency bridges, transfer oscillator for frequency counters, and for general laboratory measurements.		100kc to 10mc in six bands
IMPEDANCE MEASUREMENTS			FREQUENCY & IMPEDANCE RANGES
Type 310-A Z-Angle® Meter EASE OF OPERATION HIGH ACCURACY VERSATILITY	Measures impedance directly in polar coordinates as an impedance magnitude in ohms, and phase angle in degrees: *ZLo*. Used in measurement of impedance, inductance, capacitance, resistance, dissipation factor (D), storage coefficient (Q), and plotting impedance functions. Internal sources of 60 and 400 cycles.		30cps to 2kc 0.5-100k ohms 30cps to 20kc 0.5-6000 ohms 30cps to 40kc 0.5-5000 ohms
Type 311-A RF Z-Angle® Meter EASE OF OPERATION FREEDOM FROM COMPUTATIONS RAPIDITY	Companion instrument to Type 310-A Z-Angle Meter, Type 311-A offers same convenient impedance measurements over RF band. For laboratory use and measurement of broadcast antennas and transmission lines.		100kc to 200kc 10-5000 ohms 100kc to 1mc 10-1000 ohms 100kc to 2mc 10-500 ohms
VECTOR ANALYSIS			MAGNITUDE RANGES
Type 250-A Complex Plane Analyser VERSATILE EASILY OPERATED ELIMINATES COMPUTATION	Complex vectors quickly and accurately multiplied and divided. Simplifies network analysis and control system design. Used with vector plots on complex frequency plane to solve root locus problems, antenna array design, plotting propagation patterns, fitter design, frequency response and transient behavior.		Input: 7 to 200 or 1/7 to 1/200 Summing: 1 to 10±10

Call Bill 2000

From a modest beginning five years ago, Communication Accessories Company has grown to one of the largest exclusive toroid coil winding producers in the U. S. today. Why?

We like to think that this growth is due to the thorough, careful handling we apply to each coil . . . and because of the particular skill of our people. Whatever the reason, we'll continue — doing the best we know how — thankful for the trust that important companies have placed in us.

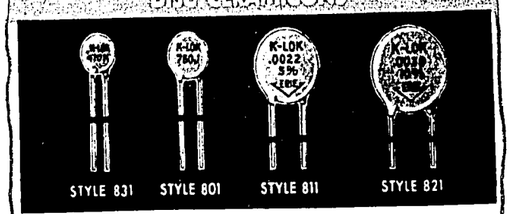
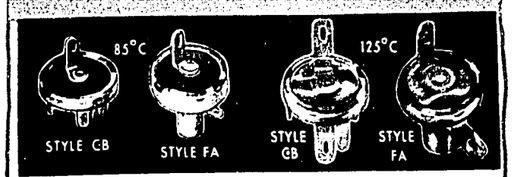
ERIE



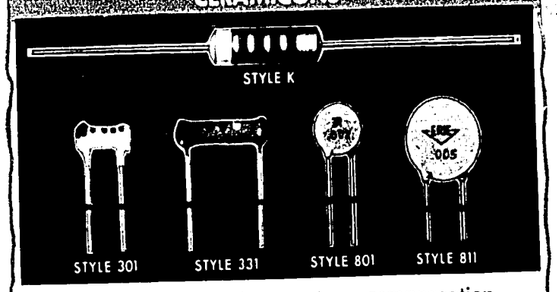
dependable electronic components

ERIE HIGH VOLTAGE CERAMICONS



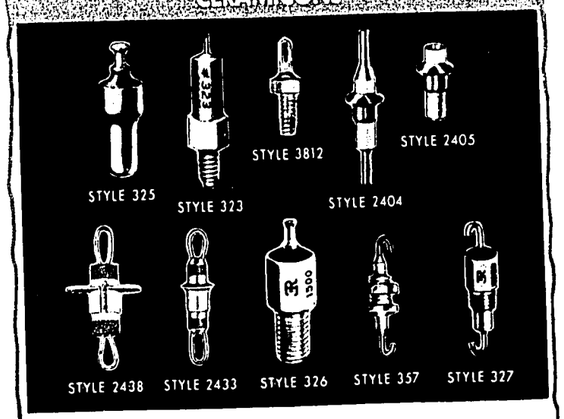
Erie offers a wide selection of disc and molded-type ceramicons for high voltage service. Available in ratings between 1000 V. and 30 KV. for high potential tuning, by-passing and filtering applications.

ERIE "K-LOK" HIGH STABILITY DISC CERAMICONS



Values up to .0047 mfd at 500 V. are available in tolerances as close as ± 5%. Capacity variations with temperature, age and voltage are exceptionally small. A truly premium capacitor.

ERIE BUTTON MICA CAPACITORS



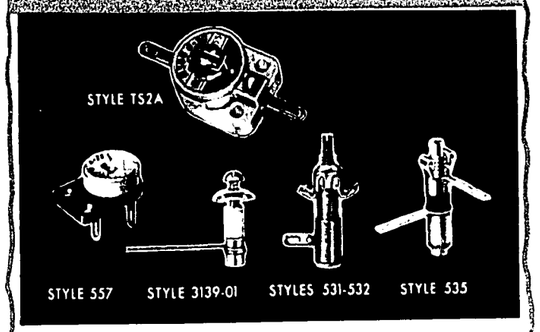
Values from 15 mmf to 8100 mmf are available in tolerances as close as ± 2%. Rated at 500 VDCW. "Q" value exceeds 1000 for values above 100 mmf. Available for maximum operating temperatures of 85°C. and 125° C. Extremely low inductance makes these very compact capacitors ideal for VHF and UHF applications.

ERIE BY-PASS AND COMPENSATING CERAMICONS

To meet exacting temperature compensation, by-passing, coupling and filtering requirements. Compensating units available from .75 to 1380 mmf. "Hi-K" by-pass units available from 100 mmf to .01 mfd.

ERIE STAND-OFF AND FEED-THRU CERAMICONS

Erie offers a wide selection of chassis—mounting capacitors designed to overcome radiation and critical by-passing problems. Available in both temperature compensating and "Hi-K" materials. Manufactured in values up to 1500 mmf with 500 V. rating.



Ceramicon, Hi-K, K-LOK, GP, Button, and Plexicon are registered trade names of Erie Resistor Corporation

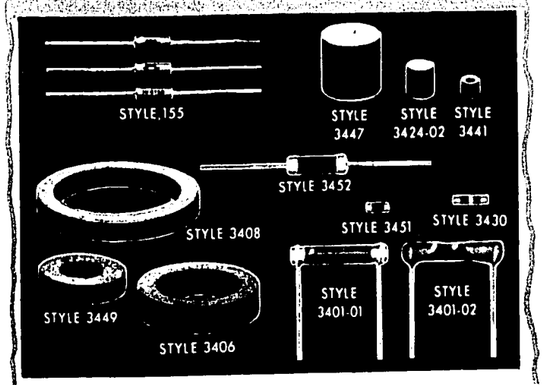
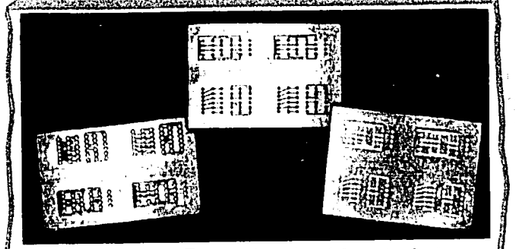
ERIE



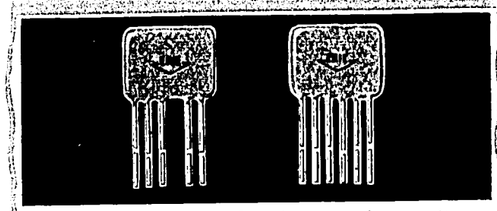
dependable electronic components

ERIE TRIMMER CAPACITORS



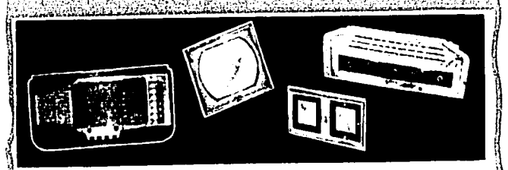
The largest and most versatile family of plastic and temperature compensating ceramic trimmer capacitors are available from Erie, to meet difficult tuner and converter requirements.

ERIE RESISTANCE PRODUCTS



Erie has 25 years experience in the design and manufacture of high quality resistor products. Among these products are precision pyrolytic resistors, high voltage resistors and ignition noise suppressors. Complete facilities available to produce a wide variety for specific applications.

ERIE EMBOSSED CIRCUITRY



The exclusive Erie printed wiring technique provides a circuit pattern actually embedded in the surface of a high grade laminated phenolic. Will withstand severe soldering temperatures without peeling. Drastically reduces assembly costs.

ERIE PRINTED CIRCUITS

By combining several resistors and capacitors into one rigid compact package Erie is able to offer many design and production advantages. A wide selection of diode filters, plate couplers and special circuits are available.

ERIE CUSTOM MOLDED PLASTICS

A pioneer in injection molded plastics, Erie specializes in custom molded name plates, dials, TV masks and other precision items that not only require close tolerances but also have the eye-catching sales appeal of three dimension beauty.

Ceramicon, Hi-K, K-LOK, GP, Button, and Plexicon are registered trade names of Erie Resistor Corporation.

STAC

FIXED RESISTORS

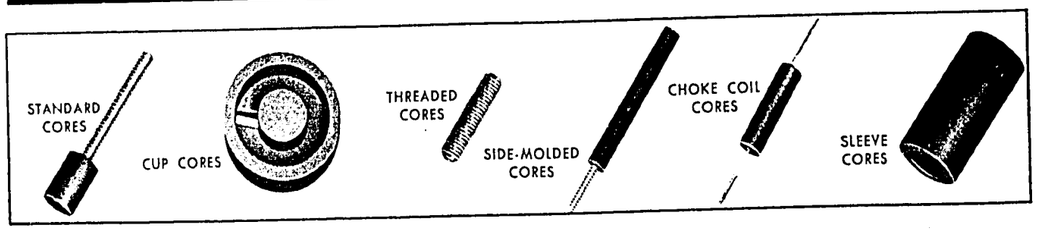
JAN-R-11 TYPES

Styles RC10, RC20, RC21, RC30, RC31, RC41, and RC42.

Write for Stackpole Bulletin J-2.

½-, 1-, and 2-Watt Sizes in all RTMA Preferred Values

Fully insulated and moisture-protected by phenolic sleeves, Stackpole resistors are available in all standard values for radio, television, military and commercial uses. In addition, Stackpole offers special resistors for automotive, lightning arrestor, capacitor discharge, surge and other uses. *Write for Stackpole Catalog RC-9.*

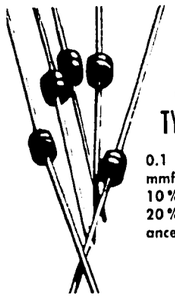


VARIABLE RESISTORS

VERSATILE SWITCHES

Small, reliable line switches are made in ratings and circuitry for every need including auto radio applications.

Stackpole offers a dependable selection of volume and tone controls, potentiometers, etc. for radio, TV, instruments, and other equipment. Single, ganged, and concentric shaft designs are available in values from 500 ohms to 5 megohms and in ratings from .5 watt. Types range from the midget LR control for TV to the conservatively rated .6 watt Type LP for heavier duty use. Special taps, extended bushings or other features can be supplied. *Write for Catalog RC-9.*



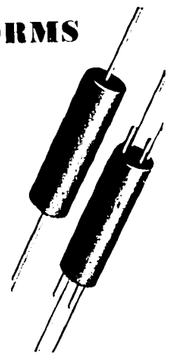
IRON CORE HEADQUARTERS

The widespread use of high Q coils with a consequent reduction in complicated circuitry has resulted in no small part from Stackpole engineering that has made new and better iron cores available at attractive prices. Stackpole production includes practically all types in common use—including cores for high- and low-frequency coils and transformers, chokes, and side-molded types for permeability tuning—as well as numerous types and adaptations made for special uses.

For all styles—standard or special—Stackpole manufacturing techniques assure iron cores of outstanding dependability and uniformity. *Write for Catalog RC-9.*

Fixed Composition CAPACITORS

47 TYPES



0.1 to 10.0 mmf. 5%, 10%, and 20% tolerances.

Type GA

Unmatched for low cost, high stability, and scarcely larger than ½-watt resistors, Stackpole "GA" capacitors are the most efficient way to couple or by-pass R-F circuits. Sturdily molded of high-dielectric constant material, these low-value capacitors have physical and electrical advantages that save assembly and testing time in virtually every R-F circuit. *Write for Catalog RC-9.*

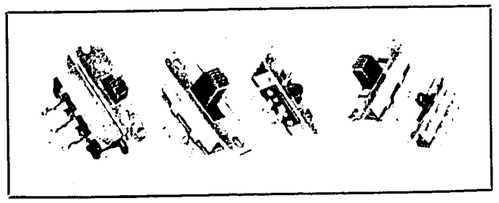
MOLDED COIL FORMS

for fast, low cost assembly

Inexpensive Stackpole molded coil forms permit smaller coils and pave the way for simplified point-to-point wiring with a minimum of soldered connections. Either axial or hairpin leads, securely anchored, are available. Types can also be supplied with iron core sections, thereby increasing Q materially, decreasing the amount of wire for a given inductance, and reducing stray magnetic fields. Write for details and samples to specifications.

KPOLE

Ceramag®



THE REALLY UNIFORM FERROMAGNETIC CORES

Lower Losses with Higher Efficiency . . . Lighter Weight . . . Smaller Sizes . . . Much Higher Permeability

Standard Stackpole Ceramag Cores provide permeabilities on the order of 10 to 1 or higher by comparison with conventional iron cores. In addition, they have less corona effect and operate much cooler due to eddy current losses resulting from their high resistivity.

The remarkable uniformity of Ceramag Cores has long made them first choice of leading television producers. Typical applications include use as cores for flyback transformers, cathode ray tube deflection yokes, width control; low-loss inductors; I-F pulse and coupling transformers; and various others where Ceramag offers distinct advantages. Details on standard and special Ceramag grades are covered in *Bulletin RC-9A.*

LOW COST SWITCHES

for instruments, radios, appliances, toys, small motors and similar uses

Dress up your product—add to its convenience and "saleability" with these sturdy, low-cost slide switches! Over 20 fractional amperage and new 3 amp. types for fractional HP motors are available. Most types can be supplied with or without detent, spring-return, or other features to match your specifications *exactly.* Modifications, including adaptations for rotary or plunger action, can be produced economically. *Write for new Stackpole Switch Bulletin RC-9B.*

CARBON & GRAPHITE SPECIALTIES

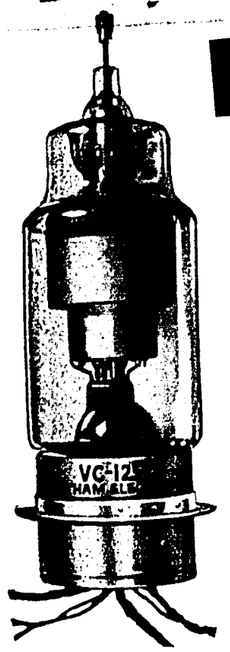
Solve Friction, Temperature, Corrosion, Shaft Sealing, Arcing, and many other problems

Anodes • Battery Carbons • Bearing Materials • Brazing Furnace Boats • Brushes of all types for rotating electrical equipment • Carbon and Graphite and Molded Metal Contacts • Chemical Carbons • Clutch Rings • Dash Pot Plungers • Electric Furnace Heating Elements • Electrolytic Anodes • Friction Segments • Glass Molds • Carbon Ground Rods • Mercury Arc Rectifier Anodes • Metal-Graphite Contacts • Power Tube Anodes • Rail Bonding Molds • Rare Metal Contacts • Resistance Welding and Brazing Tips • Seal Rings (for gas or liquid) • Special Molds and Dies • Salt Bath Rectification Rods • Spectrographite • Trolley and Pantograph Shoes • Voltage Regulator Discs • Water Heater and Pasteurization Electrodes • Welding Carbons • Welding Plates and Paste •

CARBON-GRAPHITE DATA BOOK

Newly revised and enlarged, Stackpole Catalog 40A contains helpful data on carbon, graphite, and carbon-graphite properties and their engineering uses.

GET THIS BIG 48 Page CATALOG



Catalog RC-9 gives detailed specifications on the latest Stackpole Electronic Components described on these pages. Write on your business letterhead for your copy.

CHATHAM
ELECTRONIC TUBES

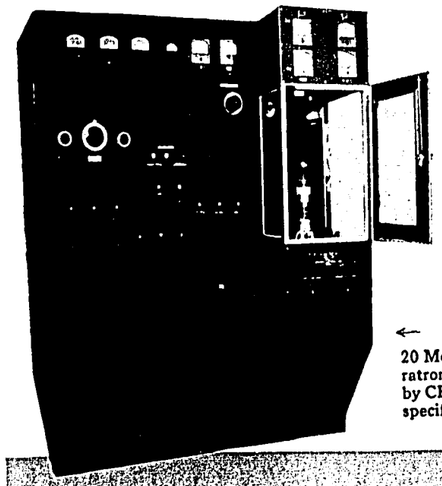
Hydrogen Thyratrons —for Pulse Voltage Generation

ELECTRICAL DATA*				
Type	VC-1258	5949/1907	5948/1754	VC-1257
Maximum Peak Forward Anode Potential	1000 volts	25000 volts	25000 volts	38000 volts
Maximum Peak Anode Current	20 amps	500 amps	1000 amps	2000 amps
Maximum Average Anode Current	0.05 amps	0.50 amps	1.0 amps	2.0 amps
Maximum Heating Factor (epy x prr x ib)	1.0×10^8	6.25×10^9	9.0×10^9	—
Nominal Filament Power	12.6 watts	95 watts	190 watts	230 watts
Hydrogen Reservoir	No	Yes	Yes	Yes

*More detailed information on electrical and mechanical data will be supplied on request.

TYPE VC-1257
Hydrogen filled, zero bias thyratron with hydrogen generator for generation of pulse power up to 40 megawatts.

TYPE 5948/1754
Hydrogen filled, zero bias thyratron with hydrogen reservoir for generation of peak pulse power up to 12.5 megawatts.

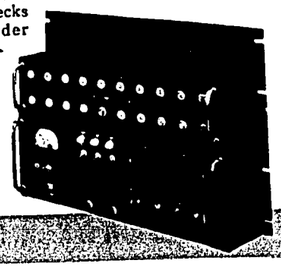


TYPE 5949/1907
Hydrogen filled, zero bias thyratron with hydrogen reservoir for generation of peak pulse power up to 6.25 megawatts.

TYPE VC-1258
Zero bias miniature hydrogen thyratron for the generation of peak pulse power up to 10 KW.

A NEW CONCEPT OF HYDROGEN THYRATRON DESIGN! The tubes illustrated represent a departure from conventional hydrogen thyratron designs and are a result of several years of concentrated development work. They are primarily employed in the generation of peak voltages with durations in the order of microseconds.

Custom-built Electronic Equipment



CHATHAM specializes in the development, design, and construction of custom-built electronic equipment to exactly meet customers' requirements. Our capable staff of engineers will furnish prompt estimates or, if desired, will call to discuss your problem personally. Call or write today.

ELECTRONICS
AND EQUIPMENT

Electronic Tubes

Ruggedized Type Tubes

The following tubes fully conform to JAN specifications and can be supplied promptly, usually direct from stock:

5R4WGY 2D21W
6AL5W OC3W
6H6WGT OD3W
25Z6WGT 2050W

TYPE 6AS7G TWIN POWER TRIODE

A Twin power triode, intended primarily for voltage regulation. Features triode balance within ±10% at rated plate current, absence of plate current drift and grid current. Heater 6.3 volts, 2.5 amps. Characteristics for each section: Amp. factor 2.0, mutual conductance 7000 micromhos, plate res. 270 ohms, plate dissipation 13 watts.

TYPE 1Z2 RECTIFIER

A small bulb, high voltage, vacuum rectifier. Low cathode heating power and low dielectric losses make tube suitable for radio frequency supply circuits. Filament 1.25 volts, .275 amps. Inverse peak anode voltage 15000, average plate current 1.5 ma., peak anode current 8.5 ma.

TYPE 6336 TWIN POWER TRIODE

A reliable twin power triode intended primarily for voltage regulation. Features high perveance and plate dissipation. Heater 6.3 volts, 4.75 amps. Characteristics for each section: Amp. factor 2.7, mutual conductance 11000 micromhos, plate resistance 250 ohms, plate dissipation 30 watts.

TYPE 395-A COLD CATHODE GAS TRIODE

Requires no filament supply and is used in many grid controlled rectifier and relay applications. Maximum D.C. anode current— 10 ma. Maximum D.C. anode voltage—150 volts

TYPE 4B32 RECTIFIER

A rugged half-wave Xenon filled rectifier. Operates in any position throughout an ambient temperature range of −75°C to +90°C. Filament 5 volts, 7.5 amp... Inverse peak anode voltage 10,000 average anode current 1.25 amps.

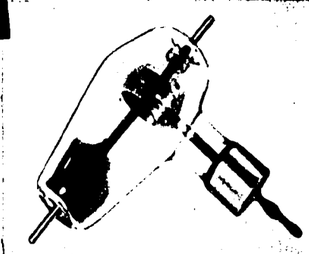
TYPE 5651 WA VOLTAGE REFERENCE TUBE

A reliable and rugged cold cathode voltage reference tube designed for extreme stability over a wide ambient temperature range. Operating voltage 86 volts, operating current 1.5 to 3.5 ma. Voltage regulation, 2 volts maximum.

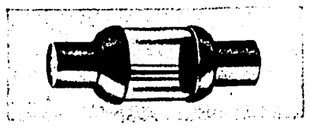
TYPE 3B28 RECTIFIER

This rugged half-wave Xenon filled rectifier will operate in any position and throughout an ambient temperature range of −75°C to +90°C. Filament 2.5 volts, 5.0 amps... Inverse peak plate voltage 10,000, average anode current .25 amp.

Chatham Vacuum Switches



TYPE 1S22 (illustrated) is a mechanically actuated, single-pole, double-throw, glass vacuum switch. This and other types can be supplied.



SPECIFICATIONS

HOLD OFF VOLTAGE: Internal—10,000 volts rms; External* (at 27,000 feet altitude)—10,000 volts rms; External* (at 40,000 feet altitude)—7,500 volts rms.

INTERRUPTING RATING, RESISTIVE LOAD: 1,000 operations life at 10,000 v, ac, rms—10 amp, ac, rms; 1,000,000 operations life at 10,000 v, ac, rms — 2 amp, ac, rms; 500,000,000 operations life at 10,000 v, ac, rms—0.1 amp, ac, rms.

NET WEIGHT (approx.) ——— 2 ozs. MAXIMUM WIDTH (overall) ——— 4½ ins.
MAXIMUM LENGTH (overall) ——— 3⅝ ins. MAXIMUM THICK. (overall) ——— 1⅛ ins.
*at 50% humidity

HIGH VOLTAGE VACUUM FUSES

Can be supplied by Chatham to exact customers' specifications if ordered in adequate quantity. Call or write for full particulars and quotes.

PLANTS AND LABORATORIES: NEWARK AND LIVINGSTON, NEW JERSEY

CATHALOY*

CATHALOY A30** *For long life*

This is an active grade 0.1% aluminum-nickel alloy designed for use in high speed electron tube production. Exhaustive testing has confirmed it as a preferred replacement for active alloys with silicon and magnesium reducing elements. Its chief advantages are long life, rapid activation, no interface impedance, no inter-electrode leakage caused by sublimed films, and a high emission value.

Composition

Aluminum.....07/.12%	Copper.....0.10% max.
Silicon.....03% max.	Carbon.....08% max.
Magnesium.....01/.06%	Titanium.....02% max.
Iron.....0.10% max.	Nickel plus Cobalt..99% min.
Manganese....0.12% max.	

Physical Properties

Density..... .322 lb./cu. in.

Temperature coefficient of resistance..... .00895 ohm/ohm/°F. (32°—212°F.)

Electrical resistivity..... { 55.08 ohms/Cmf (68°F.) / 159.18 ohms/Cmf (1000°F.)

Temperature coefficient of expansion..... 8.97 x 10^{-6} in./in./°F. (68°—932°F.)

Mechanical Properties***

Temper	Tensile Strength (x 1000 psi)	Yield Strength (x 1000 psi) 0.2% offset	% Elongation in 2 inches	Rockwell Hardness
Annealed	75 max.	15/30	55/30	B70 max.
Half hard	70/90	35/75	27/12	B65/80
Hard drawn	90/120	75/105	18/8	B80/100

Cathaloy A30 is used wherever an active alloy is now specified. The new features of this material will permit long life with freedom from interface buildup. It is recommended for general purpose entertainment type electron tubes.

CATHALOY A31 *For strength*

This is a premium grade 4% tungsten-nickel alloy designed for cathode use in ruggedized electron tubes. The necessity for this new alloy for indirectly heated cathodes has been demonstrated by the increase in requirements for strength, long life and reliability. Under electron tube test, Cathaloy A31 has demonstrated high hot strength and maintenance of good emission characteristics over long periods of life.

Composition

Tungsten...3.75/4.25%	Copper.....0.10% max.
Silicon..... .05% max.	Carbon.....08% max.
Magnesium. .01/.06%	Titanium.....02% max.
Iron.....0.10% max.	Nickel plus Cobalt 95.25% min.
Manganese 0.12% max.	

Physical Properties

Density.....0.323 lb./cu. in.

Temperature coefficient of resistance..... .00549 ohm/ohm./°F. (32°—212°F.)

Electrical resistivity..... { 96.61 ohms/Cmf (68°F.) / 145.30 ohms/Cmf (1000°F.)

Temperature coefficient of expansion..... 8.74 x 10^{-6} in./in./°F. (100°—930°F.)

Mechanical Properties***

Temper	Tensile Strength (x 1000 psi)	Yield Strength (x 1000 psi) 0.2% offset	% Elongation in 2 inches	Rockwell Hardness
Annealed	80 max.	20/40	50/30	B80 max.
Half hard	80/100	60/85	25/12	B80/95
Hard drawn	100/125	80/105	12/4	B95/110

Cathaloy A31 is resistant to bowing during assembly and processing. Its recommended use is for any electron tubes subjected to shock and vibration.

*Reg. U.S. Trademark **Manufactured under U.S. Patent

****These are average values representing the mechanical properties to be expected of normal wall tubes useful in comparison with other materials. These do not represent the mechanical properties of very small thin wall tubing.*

...a new series of cathode alloys from SUPERIOR TUBE

CATHALOY P50 *For extremely long life*

This is a passive grade nickel alloy designed for extremely long life, reliable electron tubes. Experiments with Cathaloy P50 in electron tubes have shown the low rate of barium evolution, minimum of sublimation, and freedom from interface impedance required of passive cathodes. Cathaloy P50 is the only passive alloy available commercially in seamless and WELDRAWN* forms. It is also supplied in lockseam cathode form.

Composition

Silicon..... .02 max.	Copper..... .05 max.
Magnesium..... .01 max.	Carbon..... .05 max.
Iron..... .05 max.	Titanium..... .01 max.
Manganese..... .02 max.	Nickel plus Cobalt Balance

Physical Properties

Density..... 0.322 lb./cu. in.

Temperature coefficient of resistance..... .01190 ohm/ohm/°F. (32°—212°F.)

Electrical resistivity..... { 46.06 ohms/Cmf (68°F.) / 159.82 ohms/Cmf (990°F.)

Temperature coefficient of expansion..... 8.69 x 10^{-6} in./in./°F. (86°—932°F.)

Mechanical Properties***

Temper	Tensile Strength (x 1000 psi)	Yield Strength (x 1000 psi) 0.2% offset	% Elongation in 2 inches	Rockwell Hardness
Annealed	75 max.	30 max.	50/33	B70 max.
Half Hard	75/95	33/75	25/12	B75/90
Hard Drawn	95/120	75/105	10/4	B90/105

Cathaloy P50 is used for power output tubes requiring low grid emission and for tubes which need a seamless passive cathode. This alloy is especially treated to provide good uniformity.

STANDARD ELECTRONIC PRODUCTS

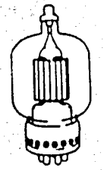
Superior Tube is the world's leading fabricator of nickel sleeves for indirectly heated oxide-coated cathodes in electron tubes. These parts are manufactured to exact specifications within close tolerances and using a wide variety of different alloys. Superior Tube engineers can work hand in hand with you to develop parts and special characteristics.

Cathode Sleeves. Made in round, oval, elliptical and rectangular shapes. These cathodes are available in:

Seamless—from .010" to .121" O.D. inclusive with wall thicknesses from .0015" to .005" inclusive. Larger diameters and heavier walls can also be produced. May be cut to practically any length desired. Bead (emboss) may be located anywhere except within .040" from the end of the cathode.

Lockseam** Produced from nickel strip especially rolled for the purpose. From .040" to .185" O.D. inclusive with wall thicknesses from .0021" to .0035". Lengths are from 9 mm to 50 mm inclusive. Vertical and circumferential beads permissible.

Disc Cathode. Superior is now ready to offer to the industry a new disc cathode for use in guns for color TV picture tubes. This is smaller in design than the present assembly which has been used so successfully in monochrome guns for the past eight years. In addition to the two big advantages of the present type disc cathode, namely choice of materials and close control of the E dimension (distance from the top of ceramic to top of emission cap), the new assembly has the following advantages:



1. The cathode surface area is reduced, which means less power input.
2. Lower heat radiation due to less power, which means constant temperature and cooler continual operation.
3. A smaller shank and emission cap, which means better transmission of electrons to the TV screen.
4. The smaller guns which are now possible permit the manufacturer to bring the guns closer together in the mount. This means better control of the deflection of the electron beams.

EITEL-McCULLOUGH, INC.
San Bruno, California

Since 1934 Eimac electron-power tubes have been specified by leading engineers for all types of military and commercial application.

The incomparable performance, reliability and quality of Eimac tubes has enabled Eitel-McCullough, Inc. to become the world's largest manufacturer of transmitting tubes in just two decades.

IONIZATION GAUGE

100 IG

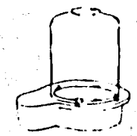
An electronic vacuum pressure gauge.
Filament voltage 3.5 to 7.5 volts.

VACUUM SWITCH

VS-2
Single pole double throw switch within a high vacuum adaptable for high voltage switching.

VS-6
For high peak current, high voltage pulse service.

PREFORMED CONTACT FINGER STOCK



WIDTH
17/32"
31/32"
1-7/16"

A prepared strip of spring material slotted and formed into a series of fingers designed to make sliding contact.

1N38A	100	120	4.0	50	150	500	5				500	

* The type 1N35 is a pair of matched germanium diodes assembled in brackets for easy mounting. The resistance of the units are matched to within 10% at 1.0 volt in the forward direction. Ratings shown are for each diode.

** The type 1N40 consists of four matched germanium diodes whose resistances are balanced within ±2.5% in the forward direction at 1.5 volts. In addition, the forward resistances of each pair of crystals are matched within 3 ohms. The crystals are mounted on a standard octal base which is enclosed in compact metal radio tube shell. Ratings shown are for each diode.

*** Diodes 1N111 and 1N112 are specifically designed and tested for computer use. The reverse resistance of these diodes is measured at +55°C by sweeping Eb/Ib from 0 to −70 volts at 60 cps. Recovery time measurements are made at 0.5 and 3.5μ. To insure maximum stability all units are visually observed for any evidence of flutter, drift, hysteresis, zero or negative AC resistance in the reverse voltage region, or increasing AC resistance with increasing forward voltage.

MYCALEX glass-bonded mica

MOLDABLE
(BY MYCALEX CORPORATION OF AMERICA ONLY)

MACHINABLE
(BY ANY WELL EQUIPPED SHOP)

MYCALEX glass-bonded mica is the unique CERAMOPLASTIC

MYCALEX glass-bonded mica has ceramic rigidity, much of ceramic temperature endurance, plus greater dimensional precision than any plastic or ceramic; MYCALEX glass-bonded mica can be molded and machined like a plastic. Dimensional stability and temperature endurance are superior to any plastic, and complex insert inclusions can be tightly molded. Incorporating the best features of both ceramics and plastics plus some special ones of its own, MYCALEX glass-bonded mica is the unique ceramoplastic.

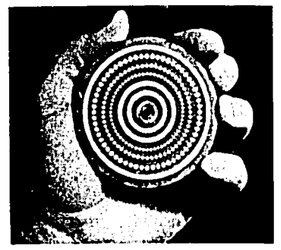
PROPERTIES

- Electrically stable; properties are unvarying with age.
- Low electrical loss.
- High dielectric strength.
- High arc resistance — cannot carbonize.
- Can be machined, ground or lapped to as close tolerances as any metal.
- Permanent dimensional stability. Free from warpage, cold flow or age distortion.
- Unaffected by humidity — zero moisture absorption.
- Impervious to water, oil, organic solvents.
- High temperature endurance.
- High thermal shock resistance.
- Inserts may be included in molded grades.
- Resistant to radiation effects.

NOTE: The MYCALEX glass-bonded mica materials, designated below, are all exclusive formulations of and manufactured only by the Mycalex Corporation of America.

THERE ARE DIFFERENT GRADES FOR DIFFERENT PURPOSES

410	555	KM Series	400	500	K Series
Continuous operating temperature limit 650°F. This grade of MYCALEX glass-bonded mica is moldable with or without inserts.	Continuous operating temperature to 900°F. A new grade of MYCALEX glass-bonded mica having high temperature endurance; moldable with or without inserts.	Moldable, not readily machinable capacitor dielectric of MYCALEX glass-bonded mica, with dielectric constant indicated by KM number such as 10, 20, 30, etc.	Continuous operating temperature limit 700°F. Readily machinable grade of MYCALEX glass-bonded mica. Not moldable, inserts must be cemented in.	A new superior grade of MYCALEX glass-bonded mica for higher continuous temperatures to 1000°F. Readily machinable; not moldable, inserts must be cemented.	Machinable capacitor dielectric of MYCALEX glass-bonded mica, with higher dielectric constant indicated by K numbers such as 10, 15, 20, etc.



MYCALEX CORPORATION OF AMERICA

World's largest manufacturer of glass-bonded mica products—Owners of MYCALEX patents and trade-marks

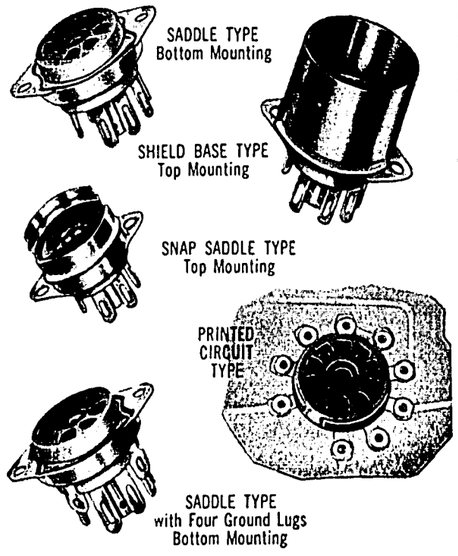
world's most nearly perfect INSULATION

Switches, Commutator Plates by MYCALEX ELECTRONICS CORPORATION

Under exclusive license of Mycalex Corporation of America

Top view of a MYCALEX 410 commutator made to the exceptionally high standards of manufacture required for the Air Materiel Command and other government projects. Only MYCALEX glass-bonded mica could provide the mechanical, dimensional and electrical properties that such precision products require.

Rear view of the same commutator. It is precision injection-molded, has 180 or 108 contacts and three coin silver slip rings. These tight inserts will take repeated soldering and violent temperature change with no loosening. Mycalex Electronics Corporation is ready to produce similar complex combinations of metal and insulation to your designs. Just call or write today.

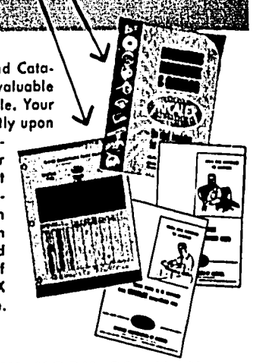


WHAT MYCALEX glass-bonded mica CAN CONTRIBUTE TO ELECTRICAL DESIGN

Electrical components of given capacities can be made smaller, more compact, and lighter in weight when the high thermal endurance, structural strength, dimensional precision, dimensional stability, and ideal balance of insulating properties of MYCALEX glass-bonded mica are employed. Tight inserts eliminate corona and produce tight seals. Printed circuit elements can be tied into inserts.

Tube Sockets by MYCALEX TUBE SOCKET CORPORATION

Under exclusive license of Mycalex Corporation of America



Our engineers are ready to advise you

If you will send us sketches, blueprints or models of any products in which MYCALEX glass-bonded mica might be used as electrical insulation, our engineers will be glad to make suggestions as to the most economical and effective ways to employ our products in your designs. Address requests to J. H. DuBois, Vice President-Engineering, at Clifton, N. J. address below.

THE COMPLETE STORY IS YOURS FOR THE ASKING

Mycalex Corporation of America is the world's largest manufacturer of glass-bonded mica products. Our facilities are devoted exclusively to the manufacture of glass-bonded mica products, and actually exceed those of the rest of the industry combined. Our extensive research, development and engineering departments are completely integrated with an ultra modern manufacturing plant. These facts are stated to emphasize the quality of the engineering service offered, without obligation, to our present and potential customers.

Our Engineers Handbook and Catalog is recommended as a valuable addition to your technical file. Your copy will be sent free promptly upon request. If you want to machine MYCALEX, ask for our informative free booklet "From One Machinist To Another"; also "How to Design Parts to be Machined from MYCALEX glass-bonded mica." A complete file of Data Sheets on MYCALEX Tube Sockets also available.

B&W Components, Coils, Sub-Assemblies

B&W TOROIDS

From sub-miniature types tinier than a Lifesaver to husky "doughnuts" bigger than a telephone dial . . . if it's toroidal, B&W makes it. Over 20 years experience in winding all types of coils for military, commercial, and amateur electronic gear goes into these B&W Toroids.

Small quantities for prototypes or large production runs can be promptly supplied to your exact specifications. Or, if you prefer, B&W engineers will gladly work with you in developing new toroids for your particular needs.

B&W "AIR-WOUND" INDUCTORS

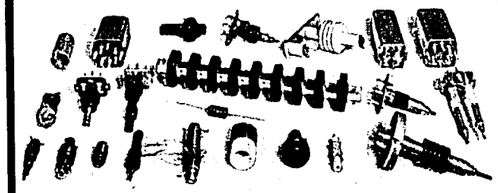
Highly efficient "air-wound" coils embodying extremely low losses, real space saving economy, and minimum weight were first pioneered by B&W. Now, backed by over 20 years experience in this specialized field, B&W offers a complete line of "air-wound" inductors in types ranging from the versatile "Miniductor" to large, high power commercial units.

In addition to these standard items, B&W regularly manufactures coils for special requirements. These range in size up to the giant coils illustrated and may be designed for virtually all r-f applications.

Inquiries for any requirements will be given prompt consideration.

B&W FILTERS and TOROIDAL ASSEMBLIES

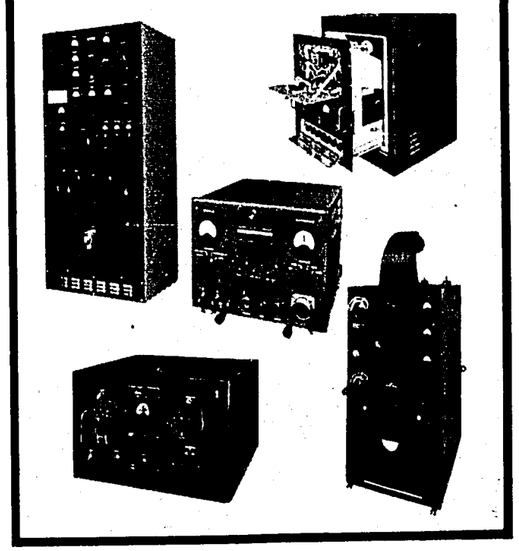
These space-saving toroidal units are a direct result of B&W's specialized experience in designing and manufacturing all types of toroids and associated assemblies.



Whether you need standard high-pass, low-pass, band-pass, or band-suppression filters or discriminators for r-f or audio frequencies . . . chances are B&W engineers have produced similar equipment in their collective engineering experience.

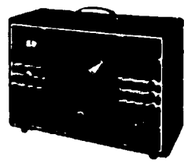
What's more, B&W's unmatched production facilities and full complement of test equipment assure that specifications will be matched in each and every unit.

B&W MULTIPLE-LAYER COILS and CHOKES



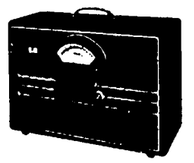
Universal-pie, progressive-universal, bank wound, solenoid . . . in fact just about any kind of coil you can name has been produced by B&W. Types range from subminiature inductors and midget r-f, oscillator, i-f, and choke coils to giant tank coils and chokes for high power transmitters or other r-f service.

B&W is fully equipped to design, produce, and test coils of practically any dimensions and with electrical characteristics to meet exacting requirements.



B&W COMMUNICATIONS EQUIPMENT

Complete Radio Relay System • Mobile or Fixed Station Radio Teletype Systems • Control Units for Teletype Systems • Direction Finding Equipment • Single or Dual Diversity Teletype Receiver Converters • Frequency Shift Teletype Exciter Units, MO or Crystal • Low, Medium, and High Power Radio Transmitters • High Power r-f Amplifiers • Switching Equipment.



In addition to complete facilities for designing, manufacturing and testing special communications equipment for military and commercial applications, B&W carries a complete line of products for amateur radio uses. Write for details today.

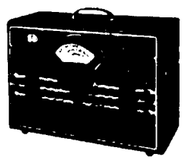
B&W LABORATORY TEST INSTRUMENTS

AUDIO OSCILLATOR
Model 200

30c-30kc range
± 1db 30c-15kc
1% stability

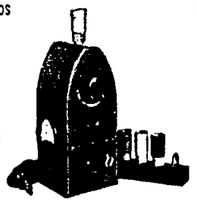
AUDIO FREQUENCY METER
Model 300

0-30kc in 6 ranges
0.25 volts min. input
5% accuracy
Handles wave form ratios up to 8:1.



SINE WAVE CLIPPER
Model 250

Provides clipped sine wave for examining audio transients and response. Does the work of a square wave generator at less cost.



LINEAR DETECTOR
Model 404

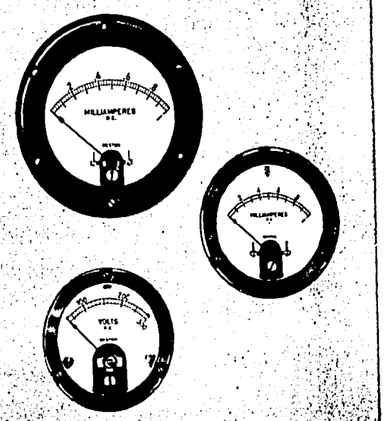
400kc-30mc range
± 1db 20c-50kc
Balanced or unbalanced inputs.
Combines r-f detection & audio bridging.

DISTORTION METER
Model 400

30c-15kc on fundamentals to 45kc on harmonics
0.3 volts min. input
0.5 db accuracy

DIP METER
Model 600

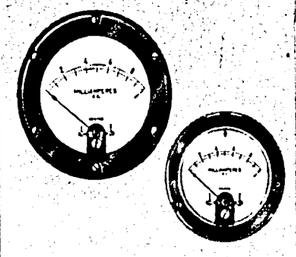
1.75mc-260mc with 5 coils. 500 ua meter . . . adjustable sensitivity. Monitoring jack & B+ OFF Switch. Shaped for use in hard-to-get-at places.



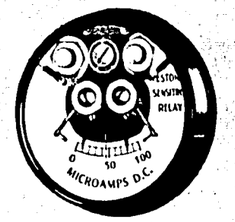
BARKER & WILLIAMSON, INCORPORATED 237 Fairfield Avenue, Upper Darby, Pa.

yet **WESTON**
RUGGEDIZED INSTRUMENTS
remain operable and accurate!

There's no guesswork about *ruggedizing* instruments at WESTON. Duplicates of *all* the approved equipment for testing – including the High Shock Hammers . . . the Vibrating and Tumbling equipment . . . the Temperature, and Moisture Cycling cabinets – all are here in the WESTON test department continually *proving* the soundness of WESTON'S ruggedized design. Thus you can *be sure* each instrument not only meets the specifications for ruggedized instruments, but will also *prove* its superior ruggedness in service. WESTON Ruggedized instruments now are available for A-C and D-C requirements in 2½", 3½" and 4½" sizes. Bulletin giving complete information sent on request. WESTON Electrical Instrument Corporation, 614 Frelinghuysen Ave., Newark 5, N. J. 6917

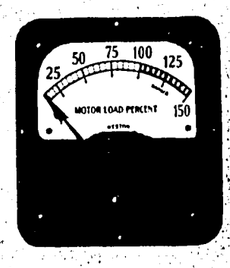


WESTON RUGGEDIZED INSTRUMENTS ARE AVAILABLE FOR A-C AND D-C IN 2½", 3½", 4½" SIZES.

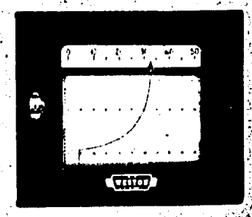


WESTON *Instruments*

designer's INSTRUMENT guide



RUGGEDIZED INSTRUMENTS —to military specifications, available in 2½", 3½" and 4½" sizes in D-C, movable iron A-C, rectifier type A-C and thermo instruments. All have sealed, externally operated zero correctors—shock-resisting, flat plastic windows—and connection terminals molded into internal rubber.



ULTRA-SENSITIVE RELAYS —extremely compact and rugged relays which operate on values as low as ½ microampere or ¼ millivolt, direct from thermocouples, resistance bulbs or other generators of minute current. Handle substantial wattage at 110 volts on non-chattering magnetic contacts. Available with single or double contacts, fixed or adjustable, manual or solenoid reset.

"MOTOR LOAD %" METERS —WESTON "per-cent load" ammeters and wattmeters make it easy for operators to secure optimum production from lathes, milling machines, automatics, grinders, etc. Prevent overloading—reduce tool breakage—assure uniform quality with fewer objects. Other scale calibrations available.

RECORDING POTENTIOMETER —ideal for built-in needs because of its extreme compactness plus ruggedness and simplicity. Ranges changed simply by inserting required range standards. Chart speeds changed by simple screwdriver adjustment. Plug-in amplifier removed in a jiffy since no soldered connections are used.

Literature on any of the above instruments sent on request.

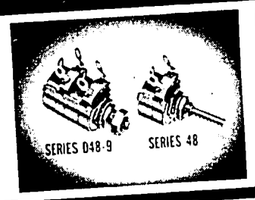
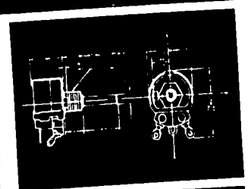
PRODUCTS OF . . . . "THE HOUSE OF RESISTORS"**



COMPOSITION-ELEMENT CONTROLS (Series 48)

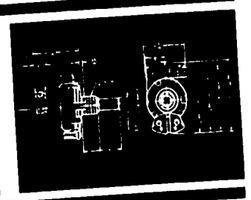


Pat Pending

5/8 DIA. FOR MINIATURIZATION

Linear, 500 ohms to 5 megohms. Taper, 2,500 ohms to 2.5 megohms. 10% resistance at 50% C.W. rotation. Rated at 0.2 watt for linear units. 300° rotation. Shaft locking device may be incorporated upon request. Single and multiple units available.

Engineering Bulletin No. 121

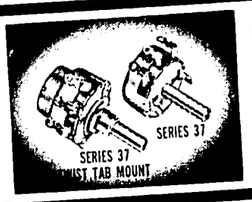


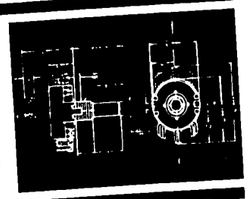
COMPOSITION-ELEMENT CONTROLS (Series 47)

15/16 DIA.

Linear, 500 ohms to 5 megohms. Tapered, 1,000 ohms to 5 megohms. Rated at 0.25 watt for linear units. Standard taps at 30% or 70% of effective rotation. 300° rotation without switch; 330° with switch.

Engineering Bulletin No. 117





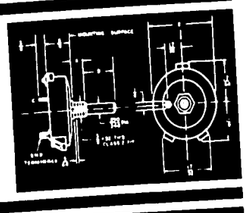
COMPOSITION-ELEMENT CONTROLS (Series 37)

1-1/8 DIA.

Linear, 500 ohms to 10 megohms. Tapered, 1,000 ohms to 10 megohms. Rated at 0.5 watt for linear units. Standard taps at 37½%, 50% and 62½% of effective rotation. 300° rotation without switch; 330° with switch.

Engineering Bulletin No. 112

COMPOSITION-ELEMENT CONTROLS (Series 51)

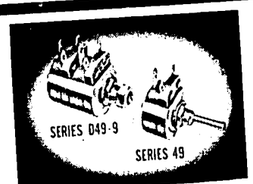


Pat Pending

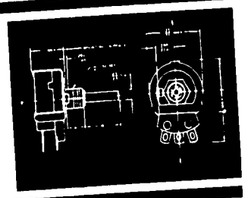
2" DIA., HI-VOLTAGE, HI-RESISTANCE

Resistance range: 5,000 ohms to 50 megohms for linear units. Rated at 1 watt. Insulation, 10,000 volts D.C. to ground. 4,000 volts maximum across end terminals.

Engineering Bulletin No. 119



WIRE WOUND CONTROLS (Series 49)

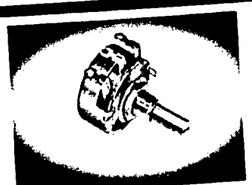


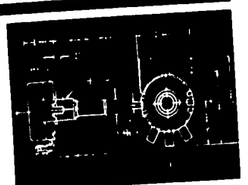
Pat Pending

3/4 DIA. FOR MINIATURIZATION

Linear, 10 to 10,000 ohms. Rated at 1 watt. Mechanical and Electrical rotation 300° - 360°. Mechanical rotation available: Max. 355°. Electrical. Shaft locking device may be incorporated. In single or multiple units.

Engineering Bulletin No. 104



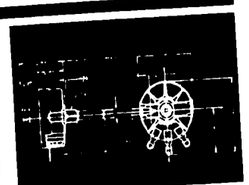


WIRE WOUND CONTROLS (Series 43)

1-1/8 DIA.

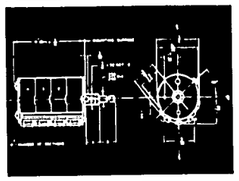
Linear, 1 to 10,000 ohms. Tapered, submit your requirements. Rated at 2 watts, for linear units. Mechanical rotation 300°. Electrical 280° without switch, 260° with switch.

Engineering Bulletin No. 116



WIRE WOUND CONTROLS (Series 58)

Linear, 1 to 50,000 ohms. Tapered, 5 to 25,000 ohms. Non-inductive 1 to 12,000 ohms, linear only. Linear, 3 watts. Mechanical rotation 300°. Electrical 280° without switch, 240° with switch.



Engineering Bulletin No. 118

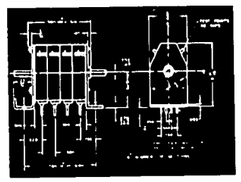
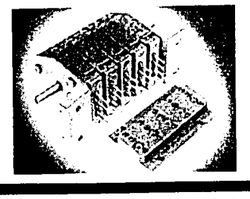
CLAROSTAT MFG. CO., INC.
DOVER, NEW HAMPSHIRE



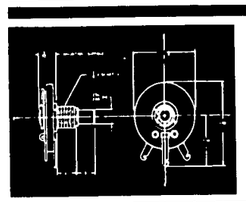


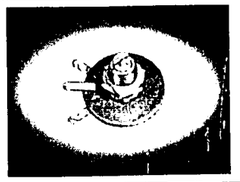
HIGH-PRECISION CONTROLS (Series 42a)

Pat Pending

Up to 18 sections in one unit assembly. Single shaft. No back lash. Linear, 10 to 100,000 ohms standard. Max. resistance, 350 ohms per degree of rotation. Tapered, submit your requirements. Linearity up to ±0.5%. Power rating for linear units, 3 watts per section. Standard rotation, Mech. 290°, Elec. 280°.

Engineering Bulletin No. 142



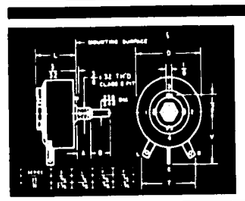


PLUG-IN ULTRA-PRECISION (Series 52)

Pat Pending

Multiple sections in one unit assembly. Single shaft. Linear, 10 to 100,000 ohms suggested values. Up to 200,000 ohms available. Resistance tolerance ±0.5%, where resolution permits. Linear and non-linear available to ±0.25%. Power rating for linear units, 3 watts at 40° C per section. Effective rotation 355°. Continuous rotation or limited rotation.

Engineering Bulletin No. 152

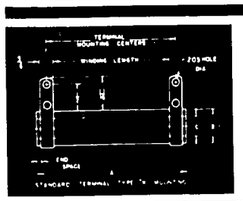


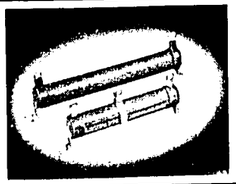
WIRE WOUND CONTROLS (Series MH)

"HUMDINGER" *

Ultra-compact potentiometer or rheostat. 2 to 1,000 ohms, only. Linear resistance-frequency. Rating, 1 watt. Intermediate taps available. Metal dust-proof cover available.

Engineering Bulletin No. 103



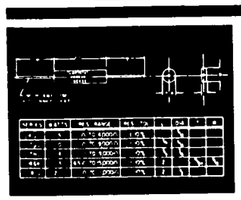


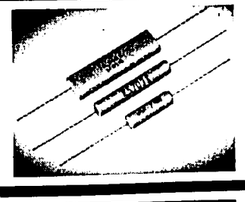
POWER RHEOSTATS (Series 25 & 50)

Pat. 2,340,524

Full power rating even at ⅛ of rotation. 25 watt, 1 to 2,500 ohms. 50 watt, 1 to 5,000 ohms. Linear and tapered. Tandem units available. 25G and 50G approved under MIL-R-6749 specifications.

Engineering Bulletin No. 115

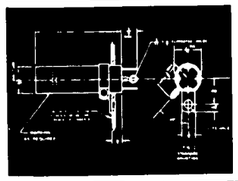




"GREENOHM"* POWER RESISTORS

Fixed, 4 to 200 watts; adjustables, 10 to 200 watts. 5% for values of 50 ohms and higher; 10% for values below 50 ohms; 1% special. Intermediate taps, upon order. Widest choice of mountings and terminals. Non-inductive units made to specifications.

Engineering Bulletin No. 113



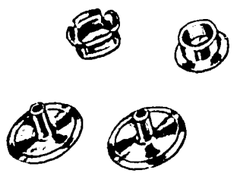
"GREENOHM JR."* POWER RESISTORS (Series GJ)

C7GJ, 7 watt, 0.5 to 5,000 ohms. C4GJ, 4 watt, 0.5 to 1,000 ohms. Standard resistance tolerance ±10%. Breakdown voltage between surface and resistance element, 2500 volts A.C. Ceramic tube casing. Inorganic materials throughout. Pigtail terminals, standard.

Engineering Bulletin No. 110

STANDEE* SERIES KS — ABOVE-CHASSIS-MOUNTED POWER RESISTORS

AKS	10 WATT, 1 TO 6,000 OHMS	1
AKS	15 WATT, 1 TO 9,000 OHMS	2
AKS	20 WATT, 1 TO 12,000 OHMS	2½
AKS	25 WATT, 1 TO 15,000 OHMS	3
AKS	50 WATT, 1 TO 20,000 OHMS	4



Standard resistance tolerance ±10%

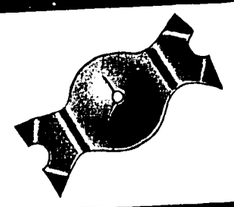
Tailor-Made Fasteners in Volume Quantities

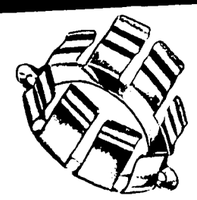
MINIATURE BATTERY CONNECTORS

For use with small "B" batteries; afford quick and positive polarized electrical connections and worthwhile space savings on small electronic equipment.

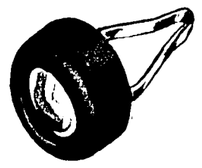


PLASTIC INDICATOR PLUG

Snap-in type, all plastic, lettered indicator plug button for electrical appliances. Can be moulded in ornamental or functional designs. For blind applications. Removable.



FISHTAIL RATCHET PLATE



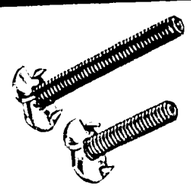
Made in a wide range of sizes to hold on smooth metal, die-cast or plastic studs. For use on refrigerators, radio cabinets, washing machines and other products to hold medallions, nameplates, etc.

VIBRATOR GROUNDING FASTENERS

Holds 1½" dia. beaded or non-beaded vibrator. Vibrator Can grounded to chassis. Holding prongs designed to hold several types of Cans.

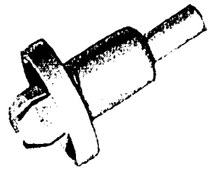
RUBBER FOOT

Snap-in Rubber Foot for Record Changers and Phonograph Mountings eliminates threaded member, lock washer and nut thereby speeding assembly time and reducing costs.



NYLON SNAP-IN NUT

Designed for the attachment of shelf supports or channels to porcelained sheet metal liners. Used with sheet metal screws they provide high pull-out values and no chippage.



SPEAKER MOUNTING BOLT

Pronged head prevents bolt from turning in speaker panel during application of nut and lock washer, permits one-side attachment providing production-line savings.

SHELF SUPPORTS

Plastic Shelf Supports designed to snap into porcelained hole. Driven pin expands Trimount section securing fastener without porcelain chippage. Variety of shapes and sizes.

PLUG BUTTONS

Made to snap into hole sizes ⅜" to 3". Can be embossed with ornamental or functional designs. Removable. Supplied with various finishes, in a variety of shapes and sizes.

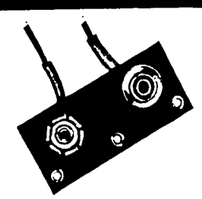
QUICKEY FASTENER

Eliminates need for welding or swaging studs to sheet metal stampings, facilitates nesting, eliminates damage in transit because Quickey snaps in just before final assembly.

TRIMOUNT STUDS

Designed to hold two or more thicknesses of material together. Easily installed by hand. Insure vibration proof attachment. Permanent or removable attachment. Wide variety of shapes and sizes.

DOT



Parts illustrated are representative of the thousands of different specialized fasteners and allied devices designed and manufactured in volume by United-Carr and its subsidiaries for leading manufacturers of electronic equipment. United-Carr's wide and varied experience with special fastening problems in the automotive, aviation and appliance fields provides an unequaled background of technical knowledge which may well be applicable to your special needs.

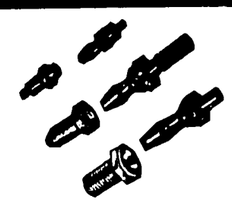
FASTENER CORP.

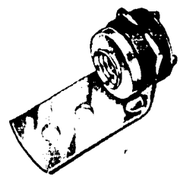


CAMBRIDGE 42, MASSACHUSETTS

Ucinite Electrical Assemblies

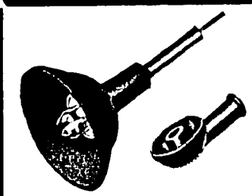
BATTERY CONNECTORS

Wired snap-on units for use with batteries equipped with United-Carr electrical snap fasteners. Wiring to customer's specifications.



BANANA PINS

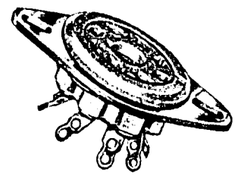
Four sizes of plugs with one-piece beryllium copper springs. Adaptable mounting ends in threaded, staking, or solder lug types. Similar Mating Jacks also available.



SHOCK MOUNTS

Offered in several sizes—brackets and durometer of rubber bushings can be varied. With threaded Teenuts or plain bushings. Insulated versions if needed.

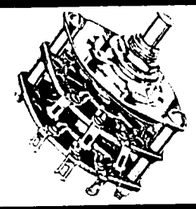
ANODE CONNECTORS



Plug button contacts for positive, firm connections. Corona resistant neoprene or silicon shields in straight or right angle types. Wiring to customers specifications.

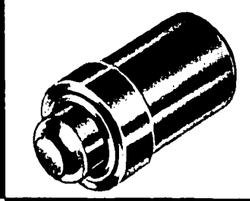
TUBE CAPS

Positive gripping, heat treated steel springs in corona resistant metal housing. Insulated or non-insulated. Wired to specifications. Type shown has silicon shield for special application.



TUBE SOCKETS

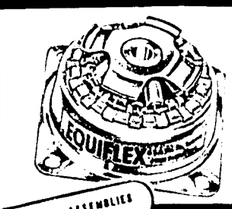
Ceramic octals and special types. Ring or saddle mounting. Open ended plates for shock mounting with rubber grommets. J A N types.



SWITCHES

Oak type switches manufactured as a licensee. Variety of rotary and push-button assemblies to specifications.

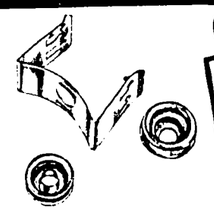
SNAP SWITCHES



Precision, momentary contact push-button switches. Small and dependable. Several circuit arrangements. Water tight version shown.

TEST JACK

Ucinite's quality jack for .080 probes. Beryllium copper contacts. Nylon insulation in colors. Metal shell for firm dependable mounting.



VIBRATION ISOLATORS

Equiflex (1 to 1 ratio) metal mounts ensure long life, fit small spaces, can be used in any direction. Three sizes, cup or plate mountings.

METAL STAMPINGS

Volume production in Metal stampings. Years of engineering and tooling skill available to solve your particular problem.

ELECTRICAL ASSEMBLIES
Ucinite
RADIO AND AUTOMOTIVE

With years of specialized experience in the electronics field and complete facilities for the volume production of small metal stampings as well as the assembly of metal to plastic and ceramic components, Ucinite is fully equipped to supply you with special electrical parts and assemblies...designed, assembled, wired and marked to your specifications. For complete design, engineering and production service, call your nearest Ucinite field engineer.

One Source For

POWERSTAT VARIABLE TRANSFORMERS

deliver a continuously adjustable output voltage from a-c power lines

A POWERSTAT variable transformer is an autotransformer of toroidal core design with a movable brush tap that is rotated to deliver any required output voltage from zero to, or above, line voltage. Important features include: excellent regulation, high efficiency, conservative ratings, zero waveform distortion, rugged mechanical construction and smooth control. Numerous standard POWERSTATS in ratings from 150 VA to 100 KVA are available for 120, 240 and 480 volt, single and three phase operation. Most are offered in either manual or motor-driven models. The chart lists some of the most-called-for types. Others — designed for specific applications — are available for every requirement. Consult us about your specific needs.

*These units are supplied with an "L" terminal which allows connecting in the field to limit the output voltage to the applied voltage. If "L" type connection is required on other models, the "L" must be included in the type number when ordering.

†When these POWERSTATS are "L" connected so that the output voltage does not exceed the applied voltage, the frequency range is 50/60 cycles.

SEND FOR POWERSTAT BULLETIN P553G

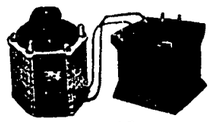
STANDARD TYPES FOR VARIED APPLICATIONS

POWERSTAT VARIABLE TRANSFORMERS for

OIL-COOLED OPERATION

TYPE O-1126

By immersing a POWERSTAT in transformer oil, the rating above normal air operation is increased and duty in a corrosive atmosphere is possible. A standard line is offered in various ratings and sizes.



EXPLOSIVE ATMOSPHERES

TYPE X-1126

To provide safe operation in hazardous areas where a small arc of spark could cause an explosion, explosion proof POWERSTATS are available. Standard models are approved by Underwriters' Laboratories for Class 1, Group D service.

HIGH CURRENT NEEDS

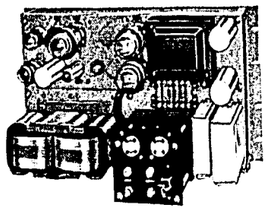
2106LC

Relatively large amounts of power can be controlled by a small POWERSTAT when used in conjunction with a fixed-ratio transformer. This combination is known as a POWERSTAT Line Corrector. It can be used to correct line voltage variations to maintain a specified output voltage and to supply a limited output voltage range. A multitude of ratings are available

LIMITED OUTPUT RANGE

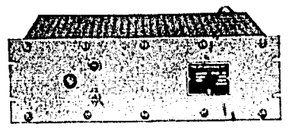
Look to SUPERIOR ELECTRIC for all VOLTAGE CONTROL NEEDS

Voltage Control Apparatus



STABILINE AUTOMATIC VOLTAGE REGULATORS

maintain a constant output voltage regardless of line or load changes

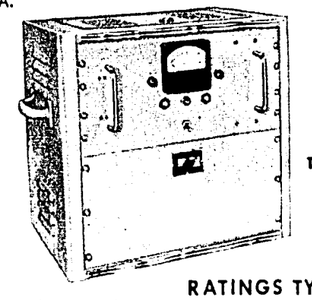


MADE IN 2 DISTINCT TYPES TO MEET YOUR NEEDS EXACTLY

TYPE IE (INSTANTANEOUS ELECTRONIC)

. . . for the most exacting control. Completely electronic with no moving parts. Correction is instantaneous. Waveform distortion never exceeds 3%. Output is held to within ± 0.1 per cent of nominal for wide line variations and to within ± 0.15 per cent for any load current or load power factor change from lagging .5 to leading .9. Standard types are listed below. Special units can be engineered to meet specific requirements.

TYPE IE5101R



TYPE IE51002R

TYPE EM (ELECTRO MECHANICAL)

. . . for controlling large industrial loads or providing zero waveform distortion. Consists of an electronic detector circuit controlling a motor-driven POWERSTAT variable transformer that feeds a buck-boost auxiliary transformer. Features include: high efficiency, insensitivity to magnitude and power factor of load and no effect on system power factor. Standard models are offered in ratings from 2 to 100 KVA.

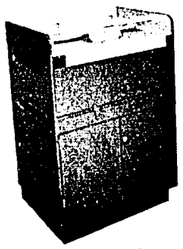
AMPEX
MAGNETIC RECORDERS

the finest tape recorders

AMPEX AUDIO RECORDERS

For uses where utmost reliability, "perfect" fidelity and accuracy of timing are of prime importance, Ampex Tape Recorders are universally preferred. America's four major broadcasting networks, the country's leading phonograph record manufacturers and various important musical organizations are among those whose usage has established Ampex as the world's standard of excellence in sound recording.



Series 300 console

Series 350 table top console on base

Series 600 single case portable

Model 450 console on base

SERIES 300—THE SUPREME AMPEX

These, the finest of the Ampex line, are the machines used where speaking or musical performances justify the best recordings it is possible to make. Because of their supreme reliability, the 300 Series machines are used by major radio networks to originate, delay and rebroadcast important radio shows. Record manufacturers use the Series 300 for master recordings because of their high signal-to-noise ratio and low flutter and wow.

SERIES 350—THE STANDARD AMPEX

Newest of Ampex's general purpose audio recorders, the 350 has a 30° slant on the top-plate. This puts reels, editing knobs and all controls within easier reach of the operator. Tape editing is faster and less tedious. A three motor tape transport (also used on the higher priced Model 300) provides excellent tape control and utmost reliability of operation. The Series 350 is unusually accessible for servicing.

SERIES 600—THE MOST VERSATILE AMPEX

The Series 600 brings Ampex standards of quality within the reach of the most limited budget. Weighing less than 28 pounds, the Ampex 600 is the first truly miniaturized recorder which can provide full professional quality for remote broadcast pickups, schools and conservatories, high fidelity enthusiasts and other semi-professional users.

MODEL 450—FOR BACKGROUND MUSIC

For background music, automatic broadcasting and TV test patterns, the Model 450 Continuous Tape Reproducer provides up to 8 hours of continuous unrepeated program. The Model 450 uses 14-inch NARTB reels with double track pre-recorded tapes. Starting, stopping, reversing and program repeating are controlled automatically with no attention from a standby operator.

SERIES 3200—FOR TAPE DUPLICATION

Designed to make duplicate tapes at minimum labor cost, the Ampex Tape Duplicator makes from 1 to 10* duplicates simultaneously and employs a time-saving speedup. Double track tapes are made in one pass. Fidelity is high (see specifications). Duplicates of any standard tape speed can be made from masters of any standard speed.

User has the option of buying from 1 to 10 slaves to operate from one master unit.

***SPECIFICATIONS**

	SERIES 300	SERIES 350	SERIES 600	MODEL 450	SERIES 3200
Frequency Response (Tape speeds shown are not all available in all models)	15 in/sec—30 to 15,000 cps ± 2 db 7½ in/sec—40 to 15,000 cps (40 to 10,000 cps ± 2 db) (down no more than 4 db at 15,000 cps) 3¾ in/sec—50 to 7,500 cps (50 to 5,000 cps ± 2 db) (down no more than 4 db at 7,500 cps)				
Signal-to-Noise Ratio (by NARTB standards)	Over 60 db	Over 60 db	Over 55 db	Over 50 db	Over 45 db
	(for full track machines at optimum speed)				
Flutter and Wow	Under 0.1% rms at 15 in/sec	Under 0.2% rms at 15 in/sec	Under 0.25% rms at 7½ in/sec	Under 0.25% rms at 7½ in/sec	Under 0.2% rms at any speed

AMPEX DATA RECORDERS

Ampex magnetic tape machines retain test data in "live" electrical form. Hence a playback of the data is like a rerun of the original test. The tremendous "memory capacity" of magnetic tape retains more complete and detailed information than any other data recording method. The data can be scanned, speeded up, slowed down, automatically reduced or converted to any other electrical, visual or physical form. To cover the widest range of data situations, Ampex data recorders are offered with various frequency ranges, numbers of tracks and modes of recording.

F-M CARRIER TYPE RECORDER—MODEL 306*

Explosions, shock waves, geophysical data and other highly transient phenomena can be recorded on the Model 306 with excellent "instantaneous" accuracy. Because the data signals modulate an fm carrier, the accuracy of the recording is unaffected by minor tape imperfections.

Also, the Model 306 is able to record the vast majority of all mechanical occurrence, since it covers the extremely useful frequency range from 5000 cycles/sec. down to zero (D.C.).

OPTIONS: *One to 14 tracks*
Rack, console or combination mounting
Record and playback, record only or playback only

WIDE RANGE DIRECT RECORDER—MODEL 307*

With a frequency response from 100 to 100,000 cycles per second, the Model 307 is particularly suited to steady state data occurring over a wide range of frequencies. The 307 has had extensive application in fm-fm telemetering, sharing this field with the Model 500 described below.

OPTIONS: *Same as Model 306*

PULSE WIDTH RECORDER—MODEL 303*

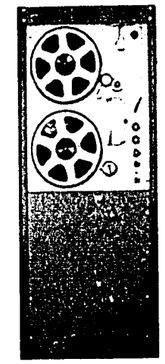
This model can record any type of phenomena that lends itself to pulse width coding. Pulses can range from 60 to 1000 microseconds and will be accurate in duration to closer than 2 microseconds. Since each track on the machine may record commutated data consisting of many channels, it is possible to record hundreds of parallel data channels on one tape on a Model 303 machine.

OPTIONS: *Same as Model 306*

"LOW FLUTTER" WIDE RANGE RECORDER—MODEL 500

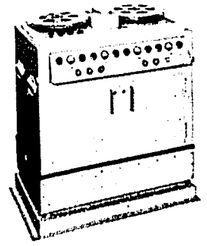
The Model 500 is a four-track, two-speed magnetic tape recorder designed to achieve extreme stability of tape motion while recording information in the frequency range between 100 and 100,000 cycles. Thus it is able to record fm-fm telemetering data without introducing any objectionable data error from small variations in tape speed. It has the lowest known flutter and wow characteristics of any tape recorder—less than 0.1% peak-to-peak by RDB standards.

Console mounting only
Four tracks only



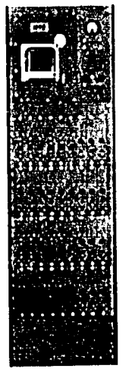
SEISMIC DRUM RECORDER—MODEL 700

The Model 700 is a highly specialized instrument for seismic exploration for oil. It records 26 channels of information in fm-modulated form on a single tape, 4"x40 1/16". The tape is mounted on a constant speed drum, and is replaceable after each test shot. Frequency response is within ± 1 db from 3½ to 300 cps, with a corresponding dynamic range of more than 45 db. The total time alignment between all data channels is closer than 1 millisecond.



Rack mounting only

**These models are available as two-track Combination Recorders. One 303 track plus one 307 track becomes a Model 309; one 306 track plus one 307 track becomes a Model 311.*



Write today for further information and complete specifications.

Waterman POCKETSCOPE

The Pocket-Size Oscilloscope

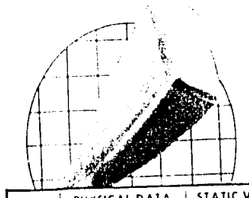
...light...compact...accurate...portable

Featuring small size, light weight and outstanding performance the HIGH, WIDE and TWIN POCKETSCOPES have become the "triple threat" of the oscilloscope field. Their incomparable versatility, reliability and accuracy heve skyrocketed this team of truly portable instruments into unparalleled demand. Each oscilloscope features DC coupled amplifiers in both vertical and horizontal channels.

HIGH

The S-14-A HI-GAIN POCKETSCOPE provides the optimum in oscilloscope flexibility for analysis of low-level electrical impulses. Extremely light weight (12¾ lbs.), compact in size (12 x 5¾ x 7 in.), dependable and accurate in performance. Vertical and horizontal channels: 10mv rms/inch with response within 2DB from DC to 200 KC and pulse rise of 1.8 μs . . . non-frequency discriminating attenuators and gain controls with internal calibration of trace amplitude . . . repetitive or trigger time base with linearization from ½ cycle to 50 KC with ± sync or trigger.

WIDE



The S-14-B WIDE BAND POCKETSCOPE is ideal for investigations of transient signals, DC signals, aperiodic pulses or recurrent waveforms. Vertical channel: 50 mv rms/in. within —2DB from DC to 700 KC . . . pulse rise time of 0.35 μs. Horizontal channel: 0.15v rms/in. within —2DB from DC to 200 KC . . . pulse rise of 1.8 μs. Attenuators and gain controls are non-frequency discriminating . . . trace amplitude calibration . . . repetitive or triggered time base from ½ cycle to 50 KC . . . ± sync or trigger . . . trace expansion, filter graph screen and many other features . . . 14 lbs. . . . 12 x 6 x 7 inches.

TWIN

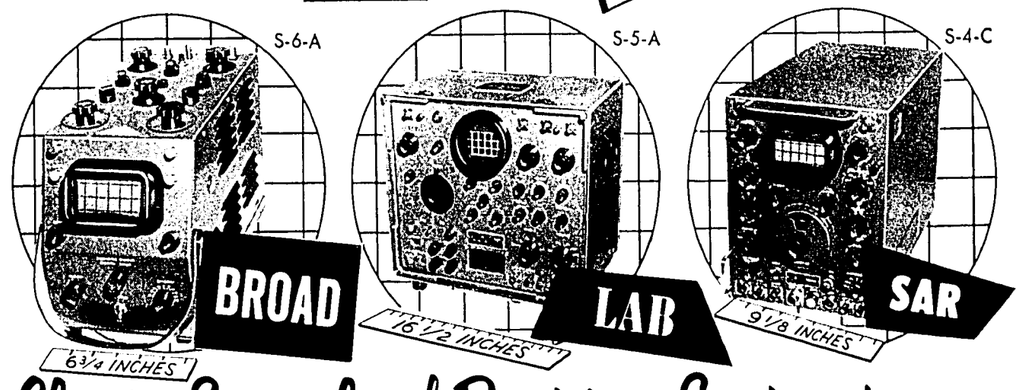
The S-15-A POCKETSCOPE is a portable, twin tube, high sensitivity oscilloscope with two independent vertical as well as horizontal channels. It is indispensable for investigation of electronic circuits in industry, school and laboratory. Vertical channels 10 mv rms/in. with response within—2DB from DC to 200 KC and pulse rise time of 1.8 μs . . . horizontal channels 1v rms/in. within —2DB from DC to 150 KC . . . non-frequency discriminating controls . . . internal signal amplitude calibration . . . linear time base from ½ cycle to 50 KC, triggered or repetitive, for both horizontal channels.

S-11-A

The S-11-A INDUSTRIAL POCKETSCOPE is a small, compact (5x7x11 inches), and lightweight (8¾ lbs.) instrument for observing electrical circuit phenomena. The flexibility of the POCKETSCOPE permits its use for AC measurements as well as for DC. The vertical and horizontal amplifiers are capable of reproducing within —2DB from DC to 200 KC with a sensitivity of 0.1v rms/in. . . . repetitive time base from 3 cycles to 50 KC continuously variable throughout its range . . . variations of input impedance, line voltage or controls do not "bounce" the signal—the scope stabilizes immediately.

RAYONIC CATHODE RAY TUBES BY WATERMAN

TUBE	PHYSICAL DATA		STATIC VOLTAGE		DEFLECTION*		LIGHT OUTPUT**
	FACE	LENGTH	A3	A2	VERT	HOR	
3JP1	3"	10"	3000	1500	111	150	352
3MP1	3"	8"		750	99	104	33
3RP1	3"	9.12"		1000	61	86	44
3SP1	1.5x3"	9.12"		1000	61	86	44
3XP1	1.5x3"	8.875"		2000	33	80	218



Deflection in volts per inch.
***Light output of an element of a raster line (one mm long and not exceeding .65 mm in width) in microlumens.*

The basic properties of the cathode ray tube that concern the designer or the user are: deflection sensitivity, unit line brightness, line width, static voltage requirements and physical size. A comparison between cathode ray tubes manufactured by Waterman Products Company is shown in the table adjoining. These tubes are available in P1, P2, P7 and P11 phosphors. 3JP1, 3JP7, 3SP1 and 3XP1 are available as JAN tubes.

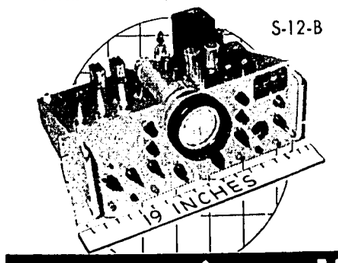
PULSESCOPE by Waterman

The Oscilloscope that Portrays the Pulse

Classic Examples of Precision Engineering...

The PULSESCOPES are cathode ray tube oscilloscopes that portray the attributes of the pulse: shape, amplitude, duration and time displacement. All PULSESCOPES have internally generated markers with the basic difference that in the SAR PULSESCOPE the markers initiate the sweep while in the others the sweep starts the markers.

BROAD



The S-6-A BROAD BAND Scope is a PULSESCOPE in performance, POCKETSCOPE in size. The instrument measures DC as well as AC signals. Unique DC calibration methods permit rapid measurements of either positive or negative, AC or DC signals. Vertical amplifier sensitivity of 0.2v rms/inch, and response to 5 mc within 3DB . . . pulse rise time of 0.1 μs . . . internal markers from 1 to 1000 μs . . . repetitive or trigger sweep from 5 cycles to 500 KC with 5X sweep expansion . . . sweep, marker and DC calibrating voltage available externally. Size 8½ x 6¾ x 13¾ in. Weight 22 lbs. Operates from 50 to 400 cycles at 115 volts AC.

LAB

The S-5-A LAB PULSESCOPE is a JANized (Gov't Model No. OS-26) portable, AC, wide band-pass, laboratory oscilloscope ideal for pulse as well as general purpose measurements. Internal delay of 0.55 μs permits observation of pulse leading edge. Includes precision amplitude calibration, 10X sweep expansion, internal trace intensity time markers, internal trigger generators and many other features. Video amplifier 0.1v p to p/inch . . . pulse rise time of .035 μs or response to 11 mc. 1.25 to 125,000 μs triggered or repetitive sweep . . . internally generated markers from 0.2 to 500 μs . . . trigger generator from 50 to 5000 pps. for internal and external triggering. Operates from 50 to 400 cycles at 115 volts AC.

SAR

The S-4-C SAR PULSESCOPE is a JANized (Gov't Model No. OS-4) portable instrument (31.5 lbs.) for precision pulse measurements for radar, TV and all electronic measurements. Portrays all attributes of the pulse . . . internal crystal controlled markers of 10 and 50 μs available for self-calibration . . . in R operation a small segment of the A sweep is expandable for detailed observation with a direct-reading calibrated dial accurate to 0.1%. Video amplifier band-pass up to 11 mc . . . optional video delay 0.55 μs . . . pulse rise and fall time better than 0.07 μs . . . R pedestal (sweep) 2.4 to 24 μs . . . video sensitivity of 0.5v. p to p/inch. Easily convertible from μs to yards. Operates from 50 to 400 cycles at 115 volts AC.

RAKSCOPE

Because the panel is only 7" high and fits any standard rack, the S-12-B RAKSCOPE admirably fills the need for a small oscilloscope of wide versatility. With all the features of the S-11-A POCKETSCOPE, the RAKSCOPE is JANized (Gov't Model No. OS-11), and has many additional advantages; the sweep, from 5 cycles to 50 KC, is either repetitive or triggered . . . vertical and horizontal amplifiers are 50 mv rms/inch with band-pass from 0 to 200 KC . . . special phasing circuitry for frequency comparison.

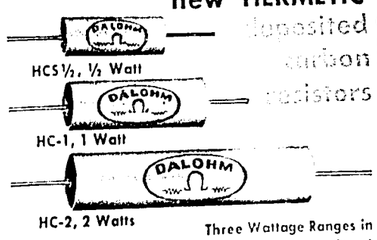
for accuracy and stability

Dalohm deposited carbon resistors are manufactured under rigid controls to deliver matchless performance and economy in any high-low resistance range.

Pure carbon in crystalline form is bonded to a selected ceramic core, and then sealed against moisture with a special silicone coating having high di-electric strength, excellent thermal conductivity, and high resistance to abrasion.

- From 1 Ohm to 200 Megohms, depending on type.
- Temperature coefficient 150 PPM per degree C for lower resistance ranges up to 500 PPM per degree C for higher ranges.
- 1% accuracy, 2%, 5%, and 10% tolerances also available.



Meet MIL-R-10509-A Specifications

SIX WATTAGE RANGES

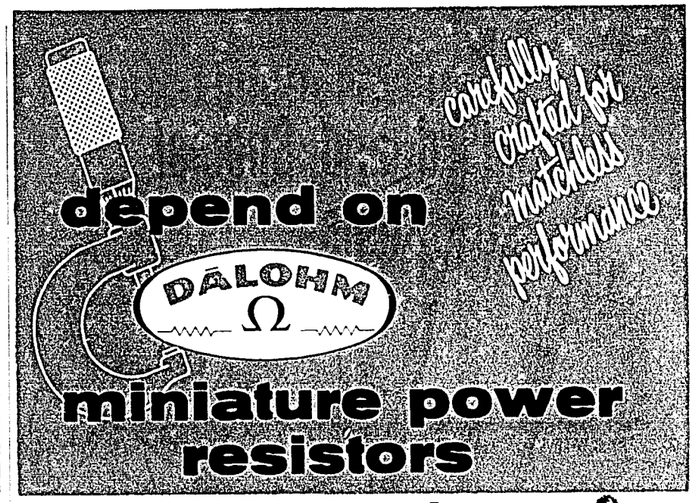
Where a great industry turns for greater growth!

In the annual **IRE DIRECTORY**, a complex radio-electronic industry is organized, coded, simplified and "indexed for use." Men, firms, products—all are listed as vital working information for 35,000 IRE members who feed on facts to give their vast industry even greater growth.



Never before has there been such need for standardization of products used, bought and sold in the radio-electronic field. The **IRE DIRECTORY** is pioneering and helping to establish industry-wide product standardization including definition of terms.

Because of its recognized service to engineers, because it is their industry encyclopedia, the **IRE DIRECTORY** is your basic selling medium in which one message works 365 days of the year. In planning next year's budget, set aside sufficient funds to put your best facts forward in the 1955 **IRE DIRECTORY**.

Engineers are educated to specify and buy.

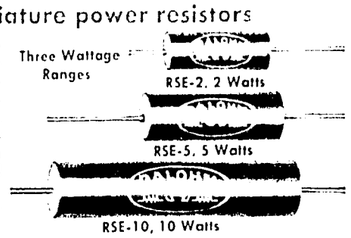
...made to survive

Conform to Applicable JAN and MIL Specifications

Dalohm miniature power resistors—the answer to those tight specifications—are carefully designed and skillfully made for all applications where the equipment must survive the most severe environmental, shock and vibration conditions. Completely welded from terminal to terminal, coated with special silicone material, and impervious to moisture, salt ions, vapor, and gases.

RH TYPES—Silicone sealed in a die-cast, black anodized radiator finned housing and mounts on sub-panel for maximum heat dissipation. Three wattage ranges: RH-25, 25 Watts, RH-50, 50 Watts, RH-250, 250 Watts.

RS TYPES—Silicone sealed offering high di-electric strength, maximum heat dissipation, and maximum resistance to abrasion. Three wattage ranges: RS-2, 2 Watts; RS-5, 5 Watts, RS-10, 10 Watts.



- Temperature coefficient 0.00002 Deg. C
- Ranges from 0.1 Ohm to 55,000 Ohms depending on type
- Tolerances 0.05%, 0.1%, 0.25%, 0.5%, 1%, 3%, 5%.

WWA & WWL TYPES—For critical applications. Encapsulated for Hermetic sealing. Built to surpass MIL-R-93A.

- Temperature coefficient 0.00002 Deg. C
- Ranges from 0.05 Ohm to 3 Megohms
- Tolerances as low as 0.05%

new ruggedized miniature power resistors

Dalohm "ruggedized" miniature power resistors answer not only the space problem, but the shock problem. They are designed for trouble-free performance under the most exacting and demanding conditions of shock and vibration. Sealed in silicone and housed in black metal tubing. (Suggested mounting clip: Atlas E-E Corp.). Same characteristics as RS Types.

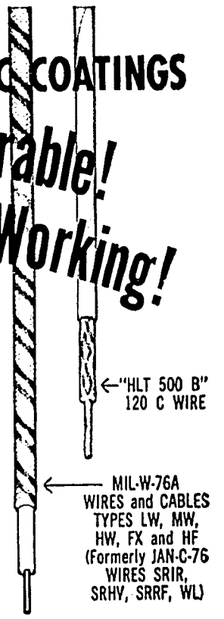
Sub-miniaturization is ITTY BITTY BIG BUSINESS

"Sub-miniaturization" actually is a self-contradictory word because as radio components are engineered down to thimble and pinhead size, electronic applications in industry become wider and greater. Very soon, a tumbler-full of complex radio-electronic equipment will fly an airplane! Circuits have been flattened to postcard size, and radio-tubes to matchheads. "Radio" becomes a part of every industry!

The fast, far-reaching growth of the radio-electronic industry has been made possible by a vast amount of technical nourishment. More than 1,000 technical meetings a year are held by IRE's 38,000 members in eighty-one active sections in every part of the English speaking world. The volume of published information required to feed this engineered progress is enormous.

For forty years, without need of change of name or direction, The Institute of Radio Engineers has published its "Proceedings of the I·R·E"—a monthly magazine by radio-electronic engineers, for radio engineers. It is an unabridged, accurate, working textbook. 481 advertisers use its pages to keep their products before design men . . . to sell in the pre-specification stage of this dynamic industry.



Engineers are educated to specify and buy.

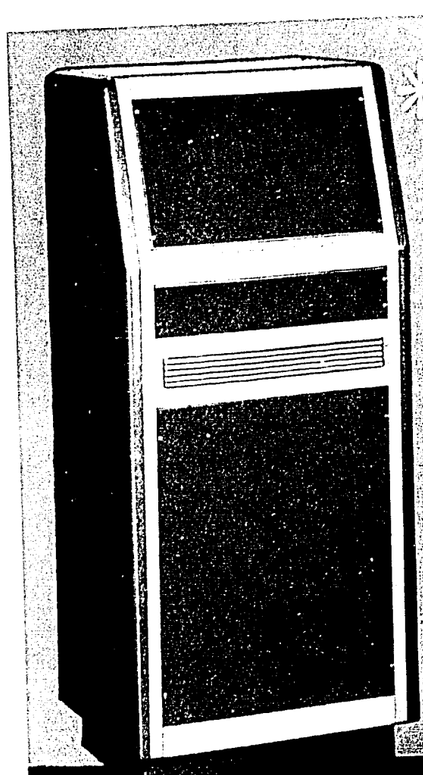
THESE RUGGED PLASTIC COATINGS —are Super-durable! —Easier Working!

These quality-engineered plasticord and plasticote constructions are available in types to meet all military and commercial wiring specifications. Chester super-durable plastic coatings offer easier-working qualities that speed wiring production . . . and extra strength that adds years to wiring life. For complete wiring dependability—connect it with Chester, the name for quality in wires and cables!



CALL OR WRITE TODAY FOR LITERATURE AND SAMPLES!

Check your wiring needs with Chester, now. Complete information on standard constructions will be sent promptly. If you need custom constructions, Chester can build them quickly and economically.

(Continued on page 121)

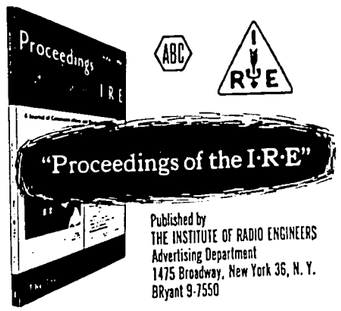
The magic evolution of radiation—controlled by the radio tube—has entered its third great epoch.

EARS!

First came the audio stage, expressed in radio: signal, human voice and glorious fidelity in music

EYES!

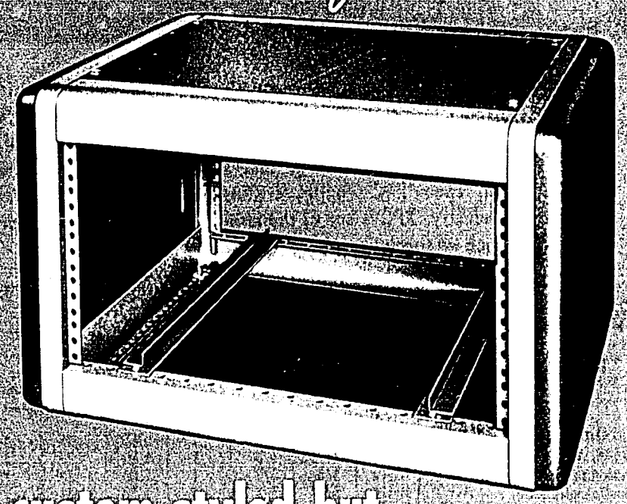
Second: video in television, even now changing to soul satisfying color.



BRAINS!

And now comes the era of the electronic computer—the signal that is detected, stored (remembered, if you wish) totalled and graphed; solving problems too staggering and monotonous for the human mind.

The electronic computer's base component is the radio tube. Its design and production is the brilliant product of the radio engineer. Advances in the computer, which soon will be as commonly used as the typewriter and adding machine, have been aided by "history making issues" of "Proceedings of the I·R·E".



The era of the electronic computer opens a vast new manufacturing market. The surest and most economical way to sell to it is by reaching the minds of men who design and make computers—radio and electronic engineers. "Proceedings of the I·R·E" puts your selling message monthly before the "thinking and doing" engineers in the fabulous, fast-moving radio-electronic industry. Circulation 41,625 (ABC).

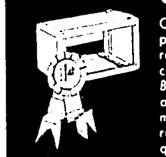
"The Jewel Box of Enclosures"

custom styled but production priced...

EMCOR

INSTRUMENT CABINET



BEAUTY

The most beautifully styled cabinet available. Worthy of housing the finest instrumentation. Added eye-appeal for your equipment makes selling job easier.

FLEXIBILITY

Stack vertically or horizontally. Lock together in minutes with TINNERMAN *Speed Nuts*. Chassis guides and supports provided for easy adjustment to chassis of varying widths. Choice of 3 types of ventilation.

QUALITY

Construction of smooth, premium quality cold rolled steel—electronically controlled welds. *Bonderite* treatment on all metal surfaces for maximum adhesion and rust protection. Highest quality, smooth baked enamel finish in 2-tone gray... insures easy nuclear decontamination.

ACCESSIBILITY

Maintenance and production assembly men appreciate the easy accessibility. Top, bottom, back and both ends quickly removable with a screwdriver. Removal of chassis or instrument to get at any part eliminated.

QUALITY RESISTORS

rpc

• WIRE WOUND PRECISION • HERMETICALLY SEALED
• ENCAPSULATED • HIGH VOLTAGE • HIGH FREQUENCY • HIGH MEGOHM

Advanced production methods, most modern equipment, and scientific skill have resulted in RPC's ability to manufacture resistors in large quantities at reasonable cost. Quality product, reasonable price and prompt delivery are assured. Large and small quantity orders are promptly filled. Today RPC supplies resistors to the best known names in American industry. RPC is one of the largest manufacturers of these resistors in which we specialize.

From servo-mechanisms to electronic computers, "RADIO" is a way of THINKING!

Far-reaching progress in the radio-electronic field is no "happy accident." Television, electronic computers and the "radiation" power of the atom, which soon will be harnessed to industry were not discovered . . . they were engineered.

From "fission" to "computation," these engineering achievements are accomplished through an enormous process of information exchange — the methodical and brilliant teaming together of engineering *thinking* to solve a problem. In radio this work has been done deliberately by a growing engineering society, through its meetings and published proceedings, which unleash the creative minds of men.

In 1953, "Proceedings of the I·R·E" published 1818 text pages, exclusive of product news and departmental features. This is the word-count equivalent of seven 500-page textbooks on radio-electronics for engineers. It exceeds the contents of the next two contemporary publications put together. This "high" in genuine reader service was logically matched by advertising worth over a half-million dollars, by firms investing in the engineers' reading interest and benefiting by it.

QUALITY RESISTORS

rpc

• WIRE WOUND PRECISION • HERMETICALLY SEALED
• ENCAPSULATED • HIGH VOLTAGE • HIGH FREQUENCY • HIGH MEGOHM

RPC resistors are designed for use in test instruments, meters, electronic computers, and scientific equipment. These units are made to meet Government Specifications and rigid industrial requirements. The high standard of these units is maintained by using *only* the finest materials and quality control methods. All test equipment and standards used for checking and calibrating are of a type equalled by only a few of the leading laboratories.

Goodness! Such growth!

During the past five years, the radio-electronic industry's spectacular growth has been paced by the increase of advertising pages in the annual IRE DIRECTORY.

In the 1949 edition, 158 advertisers took 133 pages. In the 1954 IRE DIRECTORY, the number of advertisers mushroomed to 501 and advertising pages numbered 358—an increase of 168% over the '49 edition.

The IRE DIRECTORY sells year 'round by serving over 35,000 IRE members who daily are developing and perfecting remarkable new devices. To sell ahead, put your product story before radio-electronic engineers who are planning ahead ... in the 1955 IRE DIRECTORY.

Engineers are educated to specify and buy.

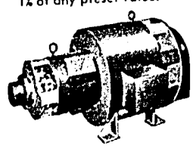
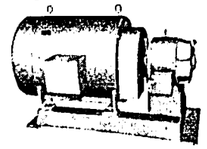
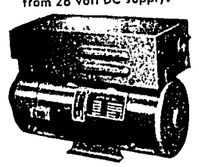
BOGUE



For precision Hi-Cycle power generating equipment to meet one of a myriad of special power requirements ranging from highest quality laboratory power to precision electronic testing, industry relies on Bogue Precision Power. Bogue as the recognized leader in the Hi-Cycle field offers these performance characteristics—



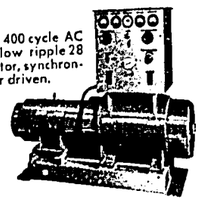
5 KW portable regulated 400 cycle motor-generator set with integral control panel.



Variable frequency 320 to 1000 cycle M-G set. Bogue magnetic amplifier maintains voltage and frequency to within one-half of 1% of any preset value.

5 KW low harmonic set. 400 cycle regardless of input voltage, loading or heating.

400 cycle voltage & frequency regulated inverter. Operates from 28 volt DC supply.



For example, Bogue special 400 cycle single shaft, two-bearing synchronous motor driven units eliminate belts, gears and other special speed changers, yet, faithfully deliver 400 cycles—exactly—no load to full load regardless of voltage variations.... truly the standard of 400 cycle power.... the reason so many prominent companies have been depending on equipment built by Bogue Electric Manufacturing Company...

How to Use Our Business and Product Sections

The Business and Product Sections of this Directory are included for the service of members so that this book will be complete as an index of an industry—listing Engineers, the Businesses they have founded, and the Products they have created for radio, television, communications, and electronics.

The following 4 Sections of the IRE DIRECTORY are:

Part		Page
1	Pink Section—Alphabetical List of Products & Group Arrangement	i-viii
2	Complete-Data-Spreads Section	2-128
3	Company List of Radio-Electronic Manufacturers	131-237
4	Product Index of Engineering Equipment and Parts —Advertisers Index—Facing Cover III	241-581

SECTION 2

Part 2 is one of the most informative and valuable sections of this Directory. Here manufacturers are supplying engineers with the maximum amount of detailed information possible through the use of multiple page spreads of their products (see page 2). The purpose of this section is to give the engineer a complete and ever available catalog file right in his IRE Directory where he can always see it easily and quickly. We believe that the services of this section will be of the utmost help to you.

SECTION 3

2760 firms have supplied us voluntarily with information about the components, equipment and services which they render the radio-electronic industry. The manufacturers are listed alphabetically in this section beginning on page 131 and ending on page 237. 1168 non-manufacturers such as distributors and representatives are listed under heading 10, a special directory. This index therefore gives the names of manufacturers of specific products available for purchase, with their addresses and code numbers indicating 104 types of products which they offer.

The completeness of this list depended on information voluntarily supplied us. Our most vigorous efforts may not have made it complete, but the excellent cooperation received from most of the industry is directly responsible for the up-to-dateness of our product data. We will welcome additions and suggestions for the 1955 edition.

SECTION 4

The Product sections start on page 241 and continue through 581. In both the alphabetical and the product indexes advertisers who have made it financially possible to provide a really comprehensive Directory to IRE members, have been listed in bold face type with a cross index to the page on which their display advertisement appears—giving complete information on their products and services. Non-advertisers have been listed in the product indexes giving firm name and state only. For full address the reader must turn to the alphabetical index for these companies.

To find the manufacturers of a given product, let us say "Amplifiers" look this product up in the Pink Section, preceding page 1. You will see that it is classification Number 1. A full listing of amplifier manufacturers starts on page 241. Turn to this classification in part 4.

As a service to engineers, both buyer and seller, we have included a list of 1168 firms and individuals who are distributors. Each name is further classified by number to indicate its place in the field—representative, distributor, exporter, etc. This is class #104, starting on page 559.

There are several other helpful indexes. Advertisers are given on pages 583-584 (inside back cover); and an index to 1954 Radio Engineering Show Exhibitors and Proceedings Advertisers who are in this Directory is on pages 116-128.

To get a comprehensive picture of what a given firm manufactures for engineers in our field, you will find in the alphabetical index of companies that all their products are listed by code number after the firm's name and address. These products are classified into ten separate Product Directories, serving basic sections of our industry. We have tried vigorously to make this truly a useful "Radio Engineers Directory."

Please submit all changes, corrections, additions and classification questions to Industry Research Div., Institute of Radio Engineers, 1475 Broadway, New York 36, N.Y.

How to Use the Machol Edge Index

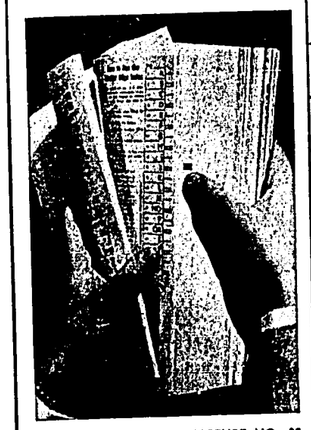
High speed reference is a major objective of the IRE Directory. To this end we have adopted the Machol Edge Index system, and these indexes:

Advertisers Index, pages 583-584.

Key to Products, Pink Section.

Index to Spreads, 1.

Guide to Machol Thumb Indexes facing 240, 270, 400 & 476.



2	PART I COMPLETE DATA SPREADS
131	PART II ALPHABETICAL COMPANY LIST
241	PART III APPARATUS
271	PART IV COMPONENTS
401	PART V INSTRUMENTS & CONTROLS
477	PART VI SERVICES & MATERIALS

The Machol system will help you find both alphabetical and product sections swiftly.

131	A
139	B
147	C
157	D
161	E
169	F
173	G
177	H
181	I
185	JK
187	L
191	M
199	N
201	O
203	P
209	QR
217	S
225	T
231	U
233	VW
237	XYZ

INSTRUCTIONS

1. With the Directory open on the desk, bend the book almost double in your left hand, with your thumb just above this box.
2. From one-line or two-line symbol adjacent to the letter or subject you seek, run your eye across horizontally to a corresponding page-edge symbol.
3. Open there with right hand.

LICENSE NO. 25
MACHOL EDGE INDEX PATENT #2680630

1954 Edition prepared by The Advertising Department of The Institute of Radio Engineers, 1475 Broadway, New York 36, N.Y.
William C. Copp, Mgr.; Lillian Petranek, Asst.; Carl Maier, Production; Frank G. MacAloon, Research.

Classifications with a System!

THE IRE Directory Product Classifications have both a pattern and a purpose. They differ widely from most product indexes, deliberately. They aim to organize the hundreds of products and services of a complex technical industry according to the way engineers think. To this end, the product grouping follows the pattern of the IRE Professional Groups, broadly. The result is a division of all products and services into ten fundamental indexes into which 104 basic classifications have been organized.

YOU will note that we here differ from most directory compilers, for we do not mix meters with motors simply for alphabetical reasons. Products used in "Audio" whether components or complete apparatus form the first fundamental group. Yet, the same manufacturer and product may also appear in the "Component Parts" section. This system gives subject grouping for speed and convenience. A directory should aid a man who has forgotten some detail, or product name. Ours helps by grouping products as one would *think*.

1. Audio Frequency Equipment (Products 1 to 11)
2. Broadcasting Equipment (Products 12 to 17)
3. Communications Equipment (Products 18 to 25)
4. Component Parts (Products 26 to 62)
5. Applications of Electronics (Products 63 to 70)
6. Radar, Microwave, UHF (Products 71 to 74)
7. Test & Measuring Equipment (Products 92 to 101)
8. Services and Materials (Groups 75 to 91)

   Here we separate the consultant, the fabricating firm, the machine for radio manufacturing, and basic materials from being lost in an alphabetical maze of component and test equipment names.
9. Education & Publishing (Groups 102 & 103)
10. Distribution Functions (Service 104)

For detailed identification, these 104 products and services, grouped in the 10 indexes, are further defined into over 600 named products. We have tried to avoid oversimplification, and a tremendous amount of information is given by our product number system. But, the basic indexing adds speed. Purely alphabetical directories are as slow and cumbersome as a telephone book. IRE engineers have liked our system better!

For safety, an alphabetical "terminology" index is given, preceding the product system in the pink pages introducing the company index. You will note also that after each firm, its products are listed by number code in the alphabetical list, and that sub-classifications shown by number code in the product indexes give much detail. Just a little study of the system will help you get great good from this book.

The IRE DIRECTORY is 10 Indexes in one book.

1954 I.R.E. DIRECTORY READER SERVICE REPLY CARD

Place a 2¢ stamp on one or more of the perforated cards below, and they will be promptly forwarded to the manufacturers listed on the back. If you prefer to send your specific requirements, a letter would be more advantageous, however be sure to enclose the reply card.

◀ The "KEL-F" polytrifluorochloroethylene molecule. How it would appear, greatly magnified. Dark grey indicates chlorine atoms that make this polymer unique.

KEL-F

Vital in Structural and Component Parts

for Severe CORROSIVE, ELECTRICAL, THERMAL Service

Check these Advantages of KEL-F® . . . TRI-FLUORO-CHLORO-ETHYLENE POLYMER

- CHEMICALLY INERT to *all* acids, alkalis, solvents . . . inert to metals
- HIGH DIELECTRIC properties
- WIDE TEMPERATURE UTILITY — minus 320°F to plus 390°F
- HIGH IMPACT strength — compressive strength up to 80,000 psi
- VARIABLE OPTICAL PROPERTIES . . . wide color range
- USED IN HARD, RIGID, SOFT, FLEXIBLE and dispersion forms to suit application
- DIMENSIONALLY STABLE — unaffected by moisture, age
- READILY MOLDED, FABRICATED, APPLIED — using standard equipment
- AVAILABLE FROM leading molders, extruders and fabricators . . . film . . . sheet . . . rod . . . tubing . . . extruded wire and cable coatings . . . dispersion coatings . . . oils, greases and waxes.

Non-flammable — non-porous — non-wetting — fungus-inert

TYPICAL PROVEN APPLICATIONS

CHEMICAL	– porous fillers – valve seats & discs – solid & core O rings – hose assemblies – gaskets & seals	– pump & valve discs – phragms – test tubes – gauges and gauge glasses	– drum plugs & sealed fittings – pipe, equipment & drum liners
ELECTRICAL	– switch parts – insulated wire & cable – insulators	– terminals – coil forms – molded components	– tube sockets – resistor sleeving
OTHER	– anti-hesive coatings – instrument parts	– bearings – medical goods	– low temp. valve seats

Chemical Manufacturing Division
THE M. W. KELLOGG COMPANY
P. O. Box 469 — Jersey City 3, N. J.

TECHNICAL SERVICE and DATA Available

The Technical Service Department and Molding Research Laboratory offer assistance to design and materials engineers in use of "KEL-F" polymers. Detailed data is available on properties, molding and application techniques for materials based on "KEL-F" polymer.

® Registered trade mark for The M. W. Kellogg Company's fluorocarbon polymers.

Quality Components

by AMPHENOL

new

165 SERIES miniature connectors

These new miniature AN-type connectors are obtainable in two connector sizes and six contact configurations. 165 series connectors, besides their very small size, are pressure-proof and completely waterproof.

A N connectors

A complete selection of plugs, receptacles and fittings, a wide variety of insert contact arrangements. AMPHENOL AN connectors have many unique features, including gold-plated contacts and famous 1-501 blue dielectric material.

RF connectors

Made in strict accordance with government specifications, AMPHENOL RF connectors are the most efficient link between coaxial cables now available. Series include N, BN, HN, BNC, C, LC, Push-on, and splices, fittings and adapters.

RG cables

Ninety RG-/U coaxial cables are now being precision manufactured in AMPHENOL's up-to-date cable plant. In addition, AMPHENOL makes special cables, including aluminum jacketed ALJAK, miniature, triaxial, and low-noise.

new

26 SERIES miniature connectors

Miniature connectors with 5, 7 or 9 contacts, rack & panel or hex nut sizes. Hood and clamp hardware available for hex nut connectors. Fine materials, electrical efficiency, makes the 26 series ideal in miniaturized application.

Blue RIBBON connectors

FAMOUS AMPHENOL *blue* Ribbon connectors now available with pin or barrier polarization. Keyed shells and latch-lock cans are available for the barrier connectors. Both types have gold-plated contacts, AMPHENOL blue dielectric.

new

Qwik microphone connectors

Modern design makes the new QWIKs the most attractive, most efficient microphone connectors for every audio application. QWIKs are lightning-fast to use—plugs click-in to receptacles, disconnection is easily made with one hand.

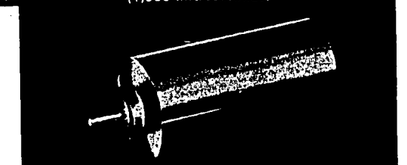
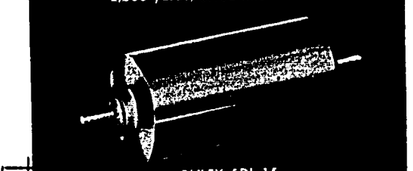
These hermetically sealed crystal units typify the precision and dependability that you expect from 23 years of Bliley research, craftsmanship and production experience.



Typical Bliley Custom-built Delay Line
(1,000 microseconds)

BLILEY
SOLID ULTRASONIC DELAY LINES



Bliley solid ultrasonic delay lines provide precise delay intervals for electronic equipment.

Standard models, SDL-15 and SDL-16, are available immediately from production. Each unit is in an hermetically sealed case. Carrier frequency is 30 mc. Attenuation is 26 db into 1,000 ohms. Bandwidth is 8 mc.

Custom delay lines are engineered to specific requirements. When requesting quotations, please send full specifications.

BLILEY SDL-16
(Single Ended Standard Type)
2,000 yards, 6.102 microseconds

BLILEY SDL-15
(Double Ended Standard Type)
1,000 yards, 3.051 microseconds

BLILEY CRYSTAL OVENS

Bliley ovens hold crystal temperatures within close limits for high stability. Designed especially for use with Bliley crystal units.

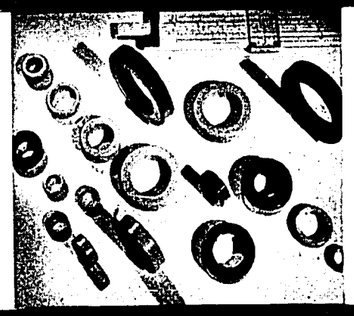
Arnold Magnetic Materials

Arnold "C" and "E" Cores are made from precision rolled Silectron strip (highly oriented silicon steel) in 1, 2, 4 or 12-mil thicknesses and a wide variety of window sizes and core areas, for high and low-frequency applications. Sizes range up to 10 lbs. in 12-mil strip, and from fractions of an ounce to hundreds of pounds in thinner gauges. Cores wound from ultra-thin strip (¼ mil or less) can also be supplied.

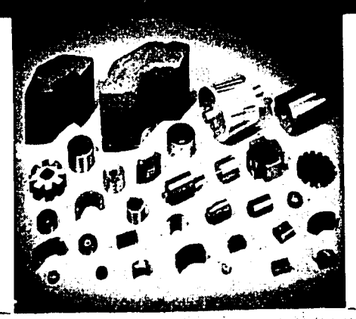
Insulated strip of the proper width is wound on a mandrel, then heat treated, bonded and cut into halves. Careful control results in accurately dimensioned and matched core halves whose effective air gap at the butt joint is very small.



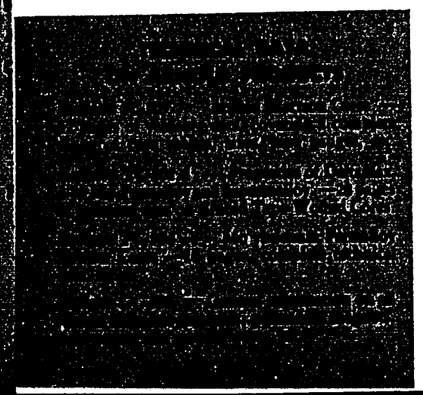
In 3-phase applications, the use of "E" Cores provides weight and size reduction, as well as higher efficiency and possible cost savings. Rigid standard tests are employed for both "C" and "E" types of cores, and special tests where required.

Depending upon the specific properties required, Arnold Tape Wound Cores are available made of Deltamax, 4-79 Mo-Permalloy, Supermalloy, Mumetal, 4750 Electrical Metal, or Silectron . . . in standard tape thicknesses of 1, 2, 4 or 12-mils, and in ultra-thin gauges of ½ and ¼-mil where required.

Practically any size core can be supplied, from a fraction of a gram to hundreds of pounds. Toroidal cores are made in 22 standard sizes with protective nylon cases. Special sizes of toroidal cores, and all square or rectangular Tape Wound Cores, are produced to individual requirements.



Used for magnetic amplifiers, pulse transformers, current transformers, wide-band transformers, non-linear retard coils, peaking strips, reactors, etc., this gapless type of core construction results in maximum effective working permeability with minimum flux leakage.



For use in loading coils, filters, broadband carrier systems and networks, for frequencies up to 200 kc, these Toroids provide high Q in a small volume. Characterized by low eddy current and hysteresis losses.

Arnold Powder Cores are supplied in four standard permeabilities: 125, 60, 26 and 14 Mu. They provide constant permeability over a wide range of flux density. The 125 Mu cores are recommended for use up to 15 kc; the 60 Mu at 10 to 50 kc; the 26 Mu at 30 to 75 kc; and the 14 Mu at 50 to 200 kc. Many of these cores may be furnished stabilized to provide constant permeability (±0.1%) over a specific temperature range.

These Moly Permalloy Powder Toroids are available in a wide range of sizes, to obtain nominal inductances as high as 281 mh/1000 turns. They are given various types of enamel and varnish finishes, some of which permit winding with heavy Formex insulated wire without supplementary insulation over the core.

Arnold manufactures permanent magnets from all grades of Alnico, although Alnico V is usually the preferred type due to the high value of energy product of that alloy.

Alnico Magnets are quite hard and somewhat brittle and may be machined only by grinding. Most sizes and shapes are manufactured as sand castings and are made to the customer's drawings and specifications. Some types and shapes of Alnico Magnets are carried as stock items.

Some small sizes of magnets may be furnished in sintered Alnico, but special shapes made in this way require rather expensive dies.

Why 38,799 Engineers have joined The Institute of Radio Engineers

BENEFITS

Get to know your fellow engineers—attend section and professional group meetings—keep up with engineering progress.

o o o

Get 12 great issues of Proceedings of the IRE. . . . A working textbook up-to-the-month on practical radio-electronic engineering.

o o o

Get the annual IRE DIRECTORY . . . an industry between covers . . . men, products, firms.

o o o

For membership information, write to:

of AlSiMag ceramics

Development of new, special purpose ceramic compositions is a regular part of our work. No matter what your requirements are, the chances are good that we have an AlSiMag composition that will do the job.

If you need a material with special characteristics or have a difficult design involving intricate shapes or close tolerances, give us your requirements. Let us show you what we can do.

(Continued on page 139)

BERKELEY ELECTRONIC COUNTERS operate from closing contacts, photocells, magnetic or stylus pickups, or any means that will produce a positive potential of at least 1 v. Model 5001, in ruggedized industrial case with tamperproof transparent cover, handles up to 100 counts per second and lists at $148.00; Model 410, 10,000 counts per second, $330.00. Units with count rates to 1,000,000 per second available.

Applications:

Counting of manufactured objects, stacked sheets, motions; electrical, mechanical, physical or optical events.

BERKELEY PRESET COUNTERS produce an output signal when the desired number of counts have accumulated. Presetting is accomplished by depressing the desired pushbutton in each column of digits; manual or automatic reset. Maximum count rate is 40,000 per second. Standard models range from the 2-column Model 5422 at $375.00 to the 6-column Model 5426 at $795.00. Double pre-set models available.

Applications:

Counting and control of objects for packaging; coil winders; cutting stock to length; overspeed control; time delay generator; etc.

BERKELEY UNIVERSAL COUNTER AND TIMER multipurpose instruments provide direct reading of elapsed time with accuracy to ± 1 microsecond, frequency measurement to 1 megacycle with accuracy of ± 1 cycle, period measurement from 0 cycle upward with accuracy to ± 1 microsecond, and counting to 1 megacycle. Model 5510, $1,100.00.

Applications:

Precision tachometry, measurement of pressure, flow, frequency, velocity, viscosity, elasticity, time interval measurement, timer calibration, timing relay, shutter action, etc.

BERKELEY FREQUENCY MEASURING EQUIPMENT covers the full range of frequency measurement applications, and includes the first complete monitoring and recording system commercially available. This system indicates in digital form frequencies to 515 mc. having input levels of 100 millivolts or more. Accuracy is ±1 cycle ± crystal stability. Frequency meter prices range from $560.00 for the 20 cycle-100 KC Model 5556 to $1,785.00 for the 0-42 mc. Model 5570. Prices of complete systems, including converters to 515 mc., selective amplifier and printed readout, on request.

Applications:

Filter and crystal testing, oscillator calibration and testing, design and testing of telemetering, transmitter and receiver equipment, transmitter monitoring, etc.

M-30

Complete information and application data available on request; please address Dept. N13

Berkeley

Note: All prices f.o.b. factory.

of Know-How • Facilities • Experience

Audio Products Corporation accomplishments in the field of Electronics stem from more than 35,000 square feet of modern production facilities and a staff of engineers accustomed to working in the more advanced phases of electronic development. From basic design to prototype, to final engineering tests, KNOWLEDGE, EXPERIENCE and FACILITIES are applied to deliver a finished product to meet the highest standards of performance and reliability. A host of successful electronic units for military agencies and commercial organizations the world over is the result.

1000 SERIES 2 POLE AND 4 POLE MODELS
With and Without Gear Trains

These Borg-Motors were designed specifically for instrumentation, control and timing devices. They are recommended for all applications where low torque, constant speed and long life are positive requirements.

For Complete Engineering Data

SERVO-CONTROL
Borg-Motors

Two phase, 115 volt, 400 cps induction type Borg-Motors for servo control applications. Approximate size 1½" diameter x 2" long with a locked rotor torque of 0.82 ounce-inch.

BEAD CHAIN

Multi-Swage Process
For Small Metal Parts

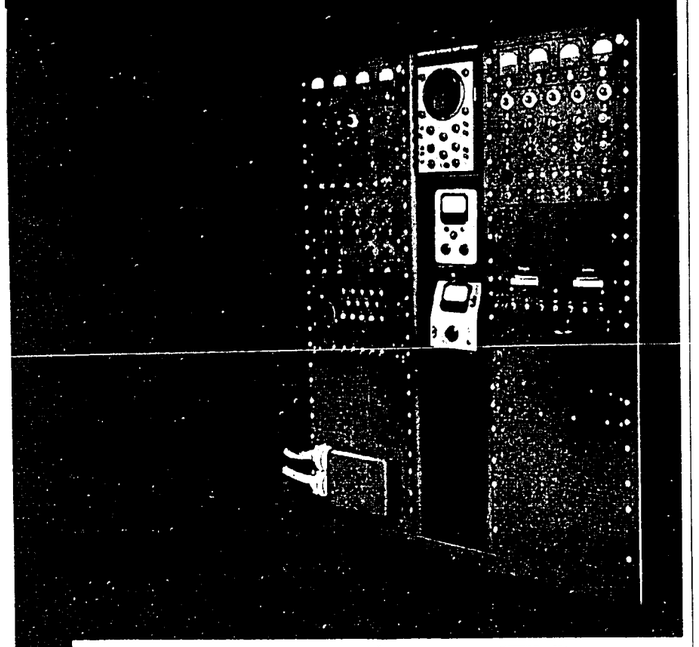
TRADE MARK

The advanced method for producing small metal parts — hollow or solid — headed, grooved, shouldered, etc., — dimensions about ¼" or less diameter and up to 1½" length. This high speed process usually requires runs of 100,000 pieces, other than stock items, to justify job set-up costs.

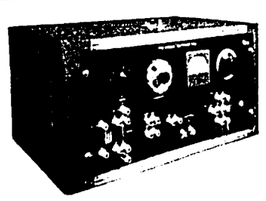
Contact Pins have a tightly swaged seam with hole through entire length for easy threading of lead wires. Ideal for plastic, ceramic, metal and other bases or panels.

Male & Female Friction Contacts are available to close tolerances, maintain "holding power" with ease of engagement and release.

Terminals in many special and standard types, including turret-type — for flared, rolled, split, spun and other assemblies.



For further details see our advertisement on page 503



THE BEAD CHAIN MFG. CO. 60 Mountain Grove St., Bridgeport, Conn.

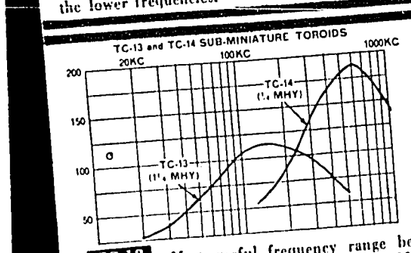
1955 RADIO ENGINEERING SHOW

MARCH 21-24, 1955

KINGSBRIDGE ARMORY, NEW YORK CITY

In Filter Networks & Toroids Your Specialist is "Burnell"

TC-11 and TC-12 SUB-MINIATURE TOROIDS

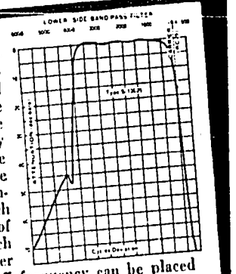


TC-11 Most useful frequency range lies between 2KC and 25KC. Maximum available inductance 1 HY for lower end of frequency range.

TC-12 Most useful range between 15KC and 150KC, maximum inductance 500 MHYS at the lower frequencies.

WE ARE PROUD OF OUR RECORD AS A MOST PROGRESSIVE FIRM IN THE ENGINEERING AND MANUFACTURING OF FILTER NETWORKS AND RELATED COMPONENTS. ENGINEERS AND ENGINEERING BUYERS AUTOMATICALLY THINK OF 'BURNELL' IN RELATION TO FILTER DESIGN PROBLEMS AS WELL AS PRODUCTION REQUIREMENTS FOR FILTERS OR TOROIDS.

TO ACHIEVE THIS ENVIABLE POSITION WE CONSTANTLY STRIVE FOR THE DEVELOPMENT OF NEW AND BETTER PRODUCTS THAT WOULD BEST SERVICE OUR CUSTOMER'S NEEDS.

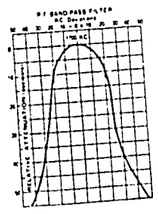


TC-13 and TC-14 SUB-MINIATURE TOROIDS

TC-13 Most useful frequency range between 40KC and 400KC. Available up to 100 MHYS with best optimum characteristics below 10 MHYS.

TC-14 Recommended for 200KC to 1 megacycle. This is best employed at inductances less than 1MHY.

SINGLE SIDE BAND FILTERS

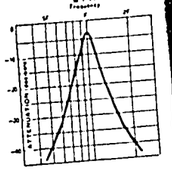


Shortly after these side band filters were introduced to the communications industry by Burnell & Company, a new interest in side band reception arose. Although other types of side band filters have been manufactured for some time, their use was limited because of extremely high cost, limited availability, and excessive volume. In attempting to overcome all of these disadvantages, our engineering staff concentrated on the development of a set of filters which would employ high quality toroids instead of crystal elements previously employed in such filters. As the effectiveness of a side band filter depends primarily upon how close the cut off frequency can be placed to the carrier frequency (and still provide sufficient attenuation) it was necessary first to determine the optimum carrier frequency at which the high Q of the toroids could permit a sharp enough rate of cut off and high enough attenuation to the opposite side band. It was for this reason that a choice of the 25kc carrier was made.

MINIATURE TELEMETERING FILTERS

In view of the large number of filters that are employed in telemetering equipment, the size of the filters is a major contributing factor to the size of the equipment. As the approximate volume of a set of twenty standard telemetering band pass filters is 1500 cubic inches, even for ground based equipment this bulk can be objectionable. This is particularly true of mobile station. Our cognizance of this led to the development of a series of miniaturized filters that necessitates practically no sacrifice of desired attenuation characteristics.

The tremendous advantage of these new filters can be seen from the fact that a set of the same twenty filters would have a volume of less than 300 cubic inches representing a reduction by volume of 80%. Every telemetering filter now being supplied in the standard case is also available in the new miniaturized version.



R. F. BAND PASS FILTERS

Until quite recently toroidal band pass filters were not too practicable at frequencies beyond the I. F. range. However, since developing toroids with much higher Q at radio frequencies than hitherto obtainable, we have extended the range of our filters to as high as two and three megacycles. A number of these attenuation filters have been able to replace types formerly employing expensive crystal elements. An additional important factor is the great reduction in size over R. F. filters, usually constructed with air core or "iron slug" coils.

Write for new and enlarged 16 page catalog 102A

INTERSTAGE FILTERS

These are economical band pass filters designed to operate either from a triode plate or cathode follower to the grid of a tube. A voltage gain of ten or more can be provided depending upon the desired band width. Range of center frequencies available lies between 60 cycles and 50,000 cycles.

Base dimensions: 1-3/16 x 1-11/16

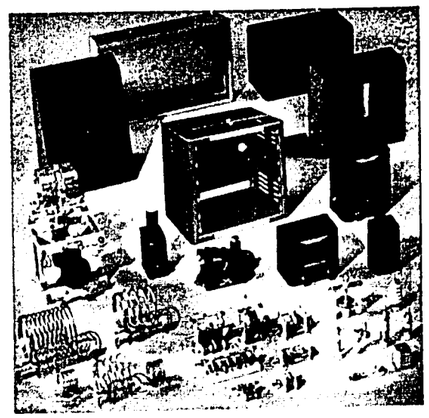
3 IMPORTANT FACTS to know about BUD

As a user of radio and electronic components and sheet metal products you should know these facts about BUD.

1. DIVERSITY OF PRODUCTS



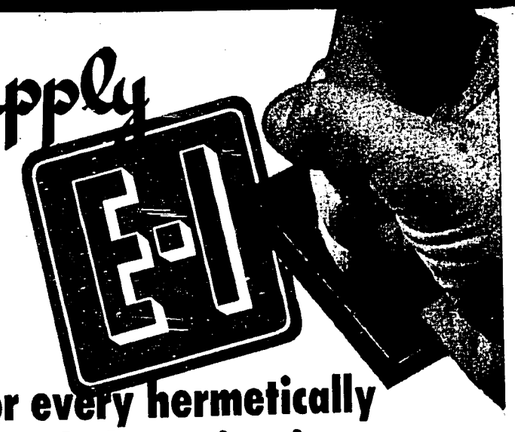
Bud makes over 1400 different electronic components and sheet metal products. This enables you as an engineer, experimenter or purchasing agent to meet your needs economically and efficiently—for a single part or a production run specially designed and fabricated.

2. ECONOMY ON SPECIALS

A slight change in one of our stock items, part of which are illustrated here, may give you exactly what you want in the way of a "special" without special tool and die costs. Delivery, too, can be accelerated.

3. WHERE TO BUY BUD

There is a nationwide network of over 750 Bud Distributors to serve your needs. Each one is an expert and can give you practical advice on all your requirements for electronic components and sheet metal products.



BUD — THE MARK OF PERFECTION

BUD RADIO, INC.
2118 East 55th Street Dept. R.E., Cleveland 3, Ohio

One Source of Supply by E-I

—for every hermetically sealed termination

Specify—

E-I sealed leads and multiple headers

HUNDREDS OF STANDARD TYPES AT MASS PRODUCTION PRICES TO MEET EVERY REQUIREMENT

—at your fingertips!

Development, production and design engineers will find the complete E-I Data File a helpful addition to company files. The new brochure includes standardized terminations that economically solve all but the most unusual terminal problems. If custom types are required, E-I can supply these quickly, to exact specifications at quantity production prices.

CALL OR WRITE FOR THE NEW E-I DATA FILE NOW!

ELECTRICAL INDUSTRIES
44 SUMMER AVENUE, NEWARK 4, NEW JERSEY

DIVISION OF AMPEREX ELECTRONIC CORP.

EXPORT AGENTS:
PHILIPS EXPORT CORP., 100 EAST 42nd STREET, NEW YORK 17, N.Y.

1. BULLETIN 949-A
On hermetically sealed terminals. Discusses cushioned glass construction, thermal shock resistance, preferred types and special terminals. Explains code systems and methods of installation.

2. BULLETIN 950-A
On hermetically sealed multiple headers. Explains vacuum light feature, cushioned glass construction, strain-free qualities. Tin dipped for easy soldering and silicone treated for highest electrical resistance.

3. BULLETIN 951
With complete information on octal type plug-in and multiple headers. Feature a new principle of hermetic sealing. Solid metal blanks insure maximum mechanical strength and rigidity.

4. BULLETIN 952
Complete information on E-I end seals for hermetic sealing condensers, resistors and other tubular electronic and electrical components. Provide a permanent hermetic seal. Completely strain-free.

5. BULLETIN 953
Individual, color-coded hermetically sealed terminals. Available with glass inserts colored in standard, easily identified RMA color codes. Coloring is in the glass —no lacquers or enamels are used.

6. BULLETIN 960
Compression type multiple headers. Super rugged, absolutely rigid and practically indestructible. An exclusive E-I achievement offers vastly greater resistance to shock and vibration. Guaranteed vacuum-tight.

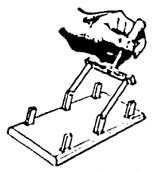
(Continued on page 148)



In keeping with the many NEW developments in radio, video, audio electronics, CARTER today offers an advanced line of rotary power supplies specially designed to meet present day functional requirements. Efficient, dependable, ample in capacity. Harmonious in appearance with modern recording, testing and transmitting equipment.

NEW Carter DUOVOLT Genemotors provide dependable 6 12 v. ROTARY dynamotor power for mobile radio equipment operating EITHER from 6 or 12 volt battery.

NEW Carter Change-A-Volt Dynamotors adapt *existing* 6 volt mobile radio to 12 volt batteries found in many new cars. No rewiring necessary.

Carter Custom Converters provide up to 500 watt capacity for operating recorders, movie cameras, projectors, business machines and many other types of AC equipment from battery power or in DC districts. Carter Custom Dynamotors are for DC to DC voltage conversion in mobile and marine communication, geophysical instruments, lab equipment. Carter TV converters operate big screen sets from 6 v. to 220 v. DC input. Carter Inductor Alternators provide HIGH FREQUENCY AC from DC input voltage. Standard Carter Genemotors are widely used to power mobile, aircraft, marine and railway radio installations. You will be amazed at the many NEW applications now served by Carter Rotary Power Supplies.

WHY ROTARY POWER?

Other type inverters produce AC by reversing the flow of DC, the same as you'd throw a switch, 120 times a second! Rotary converters actually generate AC voltage from an alternator, same as the utility stations. That's why ROTARY POWER is cleaner AC, more dependable, free from sudden failure.

RADIO FREQUENCY COILS

HERMETIC SEALING FACILITIES — DELAY LINES

If your problem concerns research, design, development — long production runs — exacting commercial or military specifications — HARNETT ELECTRIC CORPORATION can fulfill your needs.

Specialized knowledge, and a full complement of facilities enables HARNETT ELECTRIC CORPORATION to produce superior products guaranteed to function properly under your most diversified and demanding conditions

HARNETT ELECTRIC CORPORATION

138 Haven Ave., Port Washington, Long Island, N. Y.

Telephone: Port Washington 7-3334

At least one of your interests is now served by one of IRE's 21 Professional Groups

You should join and get these benefits!

Each group publishes its own specialized papers in its *Transactions*, some annually, and some bi-monthly. The larger groups have organized local Chapters, and they also sponsor technical sessions at IRE Conventions.

Aeronautical & Navigational Electronics	Fee $2
Antennas and Propagation	Fee $1
Audio	Fee $2
Broadcast & Television Receivers	Fee $2
Broadcast Transmission Systems	Fee $2
Circuit Theory	Fee $2
Communications Systems	Fee $2
Component Parts	Fee $2
Electron Devices	Fee $2
Electronic Computers	Fee $2
Engineering Management	Fee $1
Industrial Electronics	Fee $2
Information Theory	Fee $2
Instrumentation	Fee $1
Medical Electronics	Fee $1
Microwave Theory and Techniques	Fee $2
Nuclear Science	Fee $2
Quality Control	Fee $2
Radio Telemetry & Remote Control	Fee $1
Ultrasonics Engineering	Fee $2
Vehicular Communications	Fee $2

IRE Professional Groups are only open to those who are already members of the IRE. Copies of Professional Group Transactions are available to non-members at three times the cost-price to group members.

NEW CML CATALOG

Now Available

This brand new catalog features a number of new CML products and services.

Here are a few of the items in this publication:

ONE, TWO, AND THREE PHASE VARIABLE FREQUENCY ELECTRONIC POWER GENERATORS. THE LARGEST LINE IN THE COUNTRY. FREQUENCY RANGES FROM 25 CYCLES TO 50 KC POWER RANGES 300 VA TO 13.5 KVA.

FIVE TYPES OF REGULATED DC POWER SUPPLIES.

MODEL 1515 MEGOHM METER .4 Meg TO 100,000 megohms

MODEL 1520 WIDE RANGE VACUUM TUBE VOLTMETER MEASURES FROM 500 microvolts to 500 volts from 15 cycles to 250 KC.

MODEL 1010 ROTOBRIDGE THE FIRST AUTOMATIC END EQUIPMENT INSPECTOR

PRODUCTION TEST PLUGS AND CABLES

PRINTED CIRCUIT PACKAGES

DELAY LINE PACKAGES

PROJECT TINKERTOY MODULAR DESIGN LABORATORY FACILITIES AND HAND TOOLS

TEST EQUIPMENT FOR AUTOMATIC PRODUCTION LINES

Consistently Dependable

Cornell-Dubilier

miniaturized capacitors

The smaller the capacitor the more you will appreciate C-D's built-in extras!

Cornell-Dubilier has proved that you don't have to compromise with quality for size in a capacitor. You will find that regardless of how small a C-D capacitor may be, it still retains that extra margin of safety required in a high quality miniaturized unit. C-D's built-in extras and their conservative ratings, mean more for your capacitor dollar . . . and nowhere is consistent dependability more vital than in the field of miniaturized capacitors.

So bring your miniaturized capacitor needs to C-D first. The unit you are looking for may already have been designed by our engineers.

Engineering samples sent on request. For your special design and application problems, use our Technical Advisory Service.

Cornell-Dubilier Electric Corp., Dept. MB4 South Plainfield, New Jersey.

THERE ARE MORE C-D CAPACITORS IN USE TODAY THAN ANY OTHER MAKE

miniaturized C-DADEMICONS
miniaturized C-DAMICAS
miniaturized C-DABUDROC
miniaturized C-DMETALLIZED PAPER TUBULARS
miniaturized C-DANTALUMS
miniaturized C-DACERAMICS
miniaturized C-DAELECTROLYTIC

Why 38,799 Engineers have joined The Institute of Radio Engineers

BENEFITS

Get to know your fellow engineers—attend section and professional group meetings—keep up with engineering progress.

o o o

Get 12 great issues of Proceedings of the IRE. . . . A working textbook up-to-the-month on practical radio-electronic engineering.

o o o

Get the annual IRE DIRECTORY . . . an industry between covers . . . men, products, firms.

o o o

For membership information, write to:

from hearing aids to magnetrons

CRUCIBLE PERMANENT MAGNETS

provide consistently higher energy product

When buying or specifying permanent magnets, consider these Crucible advantages. Crucible alnico permanent magnets are made to meet practically any size requirement from 0.01-pound hearing aid magnets to several-hundred-pound magnetron magnets—and everything in between. Crucible magnets are sand cast, shell molded or investment cast to meet your every size, tolerance, shape and finish need. And their magnetic quality is unsurpassed . . . they *consistently* provide the maximum energy from a minimum volume of magnet material.

Since alnico alloys were first developed, Crucible has been a leading producer of this superior type of permanent magnet. So for technical assistance in solving magnet application problems, don't hesitate to call Crucible. And if you are interested in either *Magnet Design* or *Data on Permanent Magnet Alloys*, write for a free copy on your company letterhead.

CRUCIBLE first name in special purpose steels

54 years of Fine steelmaking **ALNICO PERMANENT MAGNETS**

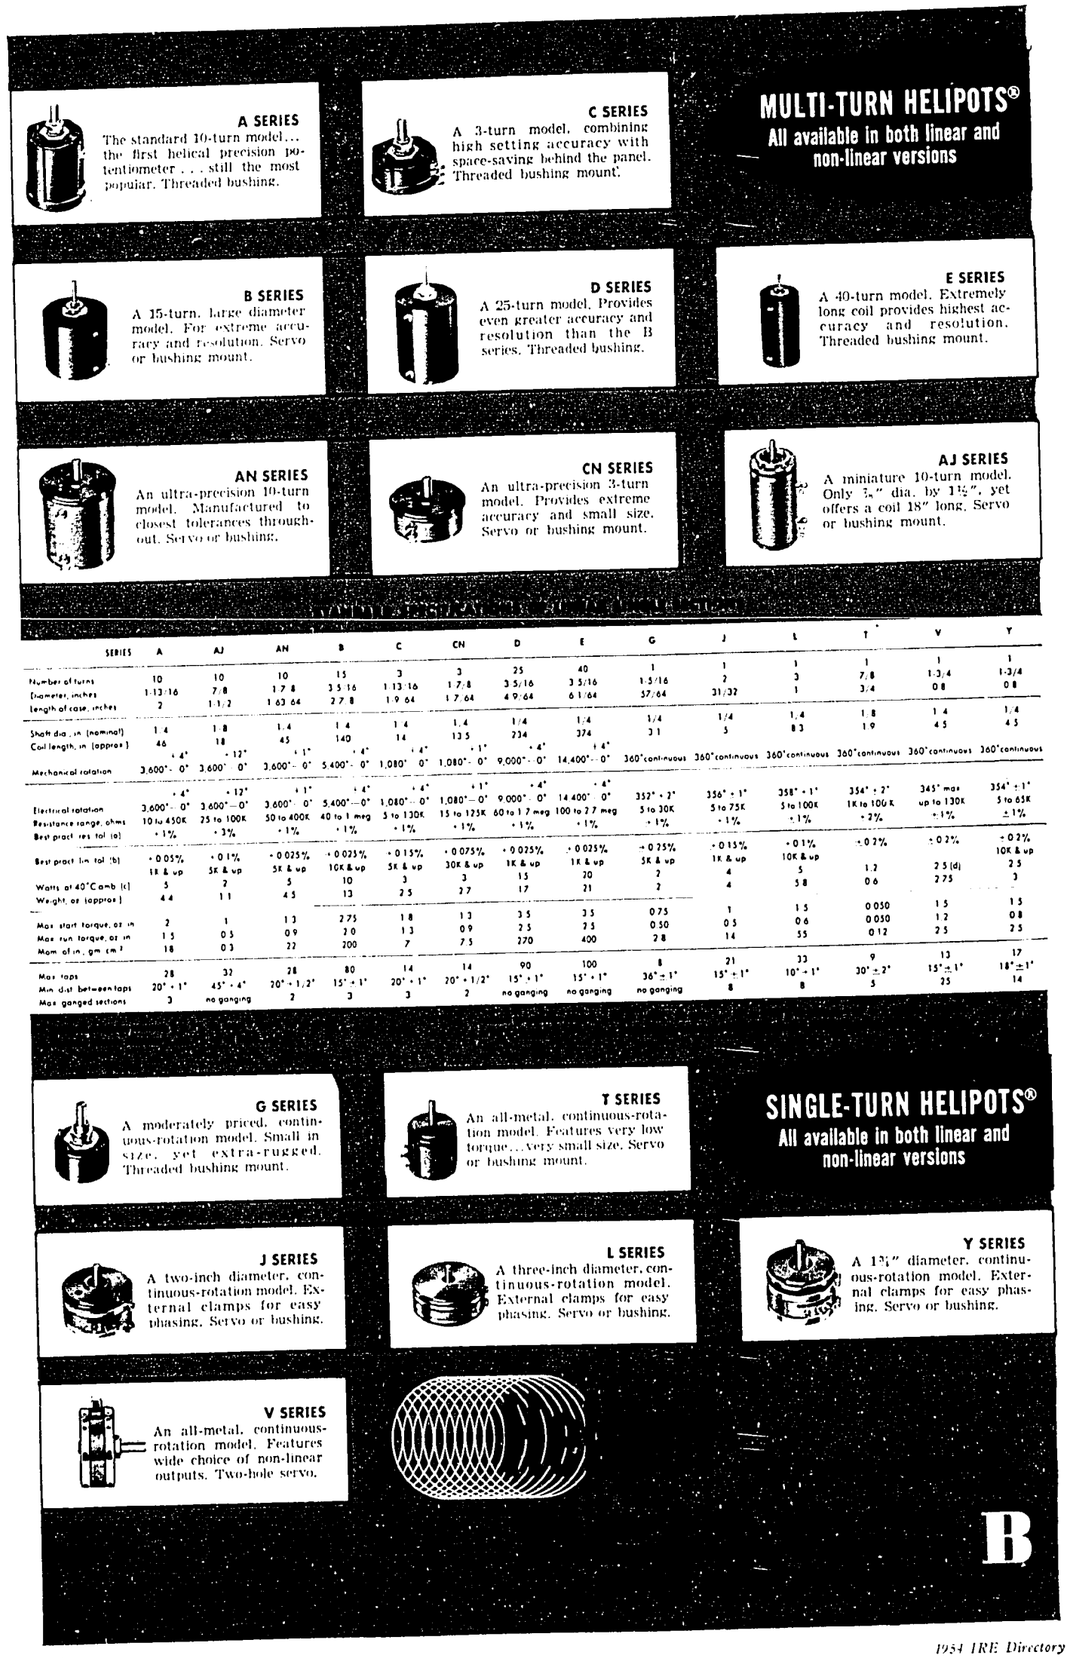
COSSOR

DESIGNERS AND MANUFACTURERS OF ELECTRONIC EQUIPMENT

including:—

Analogue Trainers and Simulators
Instrument Landing System Equipment
V. H F. Transmitters and Antennae
Oscilloscopes — Ignition Analyzers

Research and Development Projects include:



Completely self-contained Cathode Ray Tube Displays
Special Purpose Deflection Yokes
High Power Sonic and Ultra Sonic Amplifiers
Fork Regulated High Power 60 CPS Amplifier
Regulated Power Supplies — Time Base Generators
Square Wave Generators — Miniature Marine Radar

Cossor (Canada) Limited has solved many problems in the field of electronics, electronic control, measurement, and other special applications for government, research laboratories, and industry. Our engineers will be pleased to discuss and quote on your electronic problems.

son bright spots the Sales Picture!

There are literally *hundreds* of ways in which *DRAKE* Socket Assemblies and Signal Lights can help an appliance sell itself!

The evident promises they give of greater *safety*, more *economy*, higher *efficiency* in use can tip the prospective buyer's decision *your* way . . the fulfillment of those promises when the appliance is put to work in the home or store helps build the satisfaction which brings a customer back again for *your* brand.

Almost endless possibilities for practical application, both for warning signals and for illumination, can only be barely suggested by the examples illustrated:

A . . *BEEHIVE JEWEL LIGHT ASSEMBLY, for many applications . . Lamp replaceable from front of panel.*

B . . *GERMICIDAL, with ultra-violet lamp for purifying and deodorizing.*

C . . *JEWEL LIGHTS, with wired leads, for use where signal lights must be practically infallible . . Terminals can't short.*

D . . *SWITCH SOCKETS, for concealed illumination at working areas.*

E . . *INDICATOR BATTERY, with neon lamps and necessary resistance, for use in limited space.*

F . . *SHIELDED LIGHT SOURCE.*

G . . *REFLECTOR SWITCH TYPE ASSEMBLY, for concentrated illumination on work areas.*

H . . *LAMP BANK, consisting of two series groups in parallel.*

It costs so little to get the extra sales punch and performance advantages precision-made, *use*-proven DRAKE Socket and Signal Light Assemblies can give your unit. Write Dept. IR, and tell us what type of appliance you have in mind. Our broad experience often suggests low-cost possibilities which you may have overlooked.

Institute of Radio Engineers

PUBLICATIONS

Proceedings of the I.R.E.

A monthly collection of the latest data and theory in the electronic engineering field. Subscription to this invaluable engineering magazine is included as a part of I.R.E. membership dues.

Professional Group Transactions and Newsletters

Many I.R.E. Professional Groups publish periodical information on the latest developments in their respective fields. For further information on these groups and the fields they cover, see pages 238-239.

IRE Directory

Annually, the Institute publishes this directory, containing the names of all I.R.E. members, and the latest available information on the firms and products in the field.

To receive these publications, and other benefits of I.R.E. membership, write today for information to:

The Institute of Radio Engineers

NEW HUDSON CATALOG

....a complete guide to a dependable source of supply!

STANDARD CASES AND COVERS
— prompt shipment in large quantities from stock!

•

SPECIAL SHAPES AND FEATURES
— fast service on specification metal stampings!

CLOSURES STAMPINGS

GEARED TODAY TO THE ELECTRONICS FUTURE — When you make Hudson your headquarters for cases and covers, you can schedule your production with confidence. Hundreds of special shapes and sizes, with many optional features available, are carried in stock at Hudson. Ample stocks assure prompt delivery and standardized production provides precision workmanship at economical prices. From simple closures to intricate, multi-operation shapes and sub-assemblies, you can depend on Hudson to meet your specifications.

CALL OR WRITE FOR NEW CATALOG OR QUOTATIONS, TODAY!

5000 COPIES of this Directory

are sent without charge to purchasing agents and distributors the world over, in addition to over 35,000 sent to engineer-members of the Institute of Radio Engineers. Listings and advertisements in the IRE DIRECTORY can help to build your business. For information on listing or placing an advertisement write to:

INSTITUTE OF RADIO ENGINEERS
1475 BROADWAY, NEW YORK 36, N.Y.

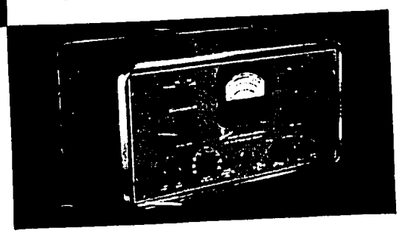
Microwave TEST COMPONENTS

PRD offers a complete line of test equipment for precise measurements in the Microwave region. This equipment, the finest obtainable anywhere, includes Frequency Measuring Devices, Signal Sources and Receivers, Attenuators and Terminations, Impedance Measurement and Transformation Devices, Detection and Power Measurement Equipment, Bolometers and Accessories.

When you test, use the best—

PRD

QUALITY
DEPENDABILITY
ACCURACY



TYPE 250-A BROADBAND PROBE — Frequency range of 1 to 12.4 Kmc/s; two tuning knobs permit precise adjustment for maximum power transfer from the probe tip to the crystal or bolometer detector; third knob controls depth of probe tip insertion.

SLOTTED SECTIONS—The mechanical and electrical design of PRD slotted sections emphasizes these important features: Instrument accuracy assured indefinitely by virtue of three bearing carriage suspension to minimize wear; waveguide section machined from solid aluminum alloy stock, to avoid warpage no castings are used.

TYPE 275 VSWR AMPLIFIER — Featuring high gain; A.G.C. to maintain output constant for slow variation in r-f power source; low input noise level of 0.03 microvolts; wide VSWR ranges of 1:1.3, 1:3, 3:10, 10:30, and 30:100; greater accuracy because VSWR scale on meter is linear.

What Makes A Good Industrial Housing?

A *good* industrial housing is made to solve *your* particular need! Its shape, size, metal, and finish meet *your* requirements for future usage. It consists of the *finest* quality in design and workmanship, yet is *inexpensive* and *quickly* available.

These are exactly the advantages of ordering OLYMPIC Metal Housings because OLYMPIC offers you:

PROMPT DELIVERY at Mass Production Prices from a stock of over 3000 Sizes and Shapes.

FABRICATED & DRAWN —ASSEMBLY & MODIFICATION SERVICE.

COMPLETE Sample Shop, Design, Engineering & Production Facilities.

For more information write for illustrated folder RE-4 Today!

ENGINEERING COUNSEL

In the rapidly expanding electronics field, many engineers are for the first time designing equipment using frequency control devices.

Scientific has a staff of engineers available for consultation; and a complete experimental and development laboratory is maintained to assist you. Prototype engineering crystals will be developed in our laboratory in accordance with your specifications.

These facilities are maintained separately from our production units, and our laboratory staff is anxious to work with you.

SCIENTIFIC

CRYSTALS OF THE HIGHEST QUALITY

SCIENTIFIC RADIO PRODUCTS, INC.

ONE OF THE OLDEST MANUFACTURERS OF CRYSTALS IN THE UNITED STATES • ORDERS FILLED PROMPTLY

Hermetically-Sealed COILS

- ALL TYPES AND SIZES
- STANDARD STOCK ITEMS
- CUSTOM CONSTRUCTIONS

Fugle-Miller hermetically-sealed coils provide positive protection against moisture and humidity. They are sealed with a true glass-to-metal technique that withstands extreme thermal and mechanical shock and vibration. Metal case provides maximum protection, is stamped and color coded as required. Units of this type meet the most rigid specifications.

Cutaway view shows construction of the new Hermetically-Sealed coils. Metal case affords maximum protection.

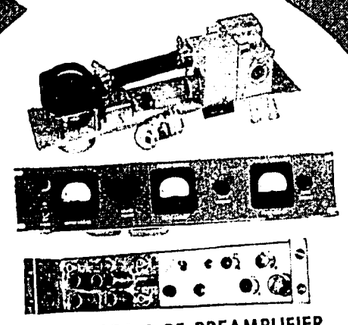
(Continued on page 175)



MODEL TK-M4/DC-M4 PW/FM AIRBORNE SET

Uses a 30 RPS commutator to sample 28 data sources in the 0 to +5 volt range. 4 to 5 watt crystal-controlled RF transmitter is frequency modulated. Equipment is sealed and pressurized for high altitude operation, and withstands ambient temperatures from −40°F to +140°F, 100g shock, and 12g vibration. Transmitting equipment is also available with other sampling rates and numbers of channels and in different packages for separate applications. Bulletin FBA-1.

M SERIES PW GROUND STATION

Separates and reduces all data channels in real time. Operates on signals from standard airborne set from FM/FM sub-carrier, or from magnetic tape recorder. Bulletin M-4

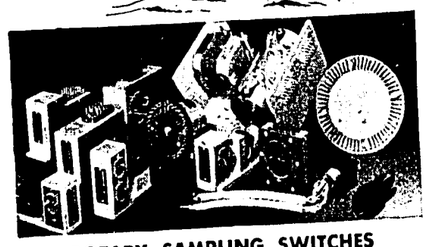
MODELS APA-1 RF PREAMPLIFIER AND AMC-1 MULTICOUPLER

Increase receiving gain and reduce noise figure for longer range RF link operation without increasing transmitter power. Permit connection of up to 4 receivers, tuned to different frequencies, to the same antenna. Bulletin APA-1.

ASCOP

Now Available!

Complete Time Division Multiplex Data Systems



Standardized equipment is now available for complete systems for multichannel data transmission over a single radio link or recording on a single magnetic tape track, using time-division multiplexing and pulse width coding.

ASCOP systems engineers can now choose from a complete line of units for sampling, coding, transmitting, receiving, monitoring, separating, reducing, and recording to assemble systems to meet your data transmission or recording problems.

Pulse width data systems provide, through time division multiplexing, a large number of identical data channels of moderate frequency response. The handling of information in the form of time rather than amplitude allows accurate operation independent of the characteristics of the transmitting or recording medium. Utilization of zero and sensitivity reference channels affords continuous automatic system calibration and avoids the need for frequent manual adjustment.

A typical standard ASCOP PW system handles 26 separate data channels with 5 CPS response per channel with overall system accuracy, from original data source to final reduced output record, of better than 1%. Real time output of each channel is available as a meter reading and as continuous record from a direct-writing recorder.

ROTARY SAMPLING SWITCHES

Over 40 models, single and multi-pole, with up to 180 contacts per pole and speeds up to 100 RPS. For all applications requiring high quality switching of low level signals. Bulletin 521-R.

QUALITY CAPACITORS BUILT BY HAMMARLUND

Performance requirements for electronic products—commercial, industrial and military—are becoming more difficult to meet. Specifications call for the finest quality components available to fulfill exacting equipment tolerances.

Hammarlund variable capacitors have been designed and built for more than 25 years to meet the most demanding of requirements. Check the general characteristics of these outstanding variables:

- Rotor and stator plates of brass stock soldered, not staked, to their supports to permanently insure perfect contact and prevent loosening of plates.
- Stator supports soldered into eyelets assembled to steatite insulators.
- Terminals hot-tinned for ease in soldering.
- Insulators of low-loss steatite, impregnated with DC 200 silicone fluid to prevent absorption of moisture.
- Rotor and stator assemblies nickel or silver-plated.
- Rotor contact springs of beryllium copper or phosphor bronze, and nickel or silver-plated.
- Precision soldering fixtures and assembly jigs used in fabricating to assure absolute uniformity of plate spacing.

These are basic reasons why Hammarlund capacitors should be used where highest dependability is required. Convince yourself in your engineering models and you will specify them for production.

For detailed information on Hammarlund variable capacitors write for this latest catalog. It includes complete drawings and specifications on all standard units. Ask for bulletin C20.

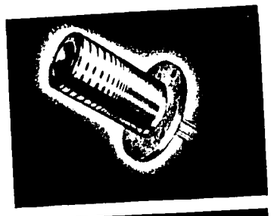
Now available

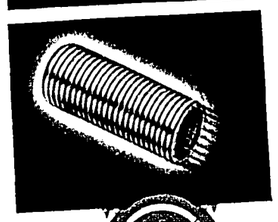
the revolutionary
ELECTRO TEC
process for your
LARGE
SLIP RING
ASSEMBLIES

featuring

• LOWER COST • CLOSER TOLERANCES • ONE-PIECE CONSTRUCTION • JEWEL-LIKE FINISH • UNIFORM RING HARDNESS • REDUCED WEIGHT



Now a Complete Service
in all sizes of Slip Ring Assemblies



* An assembly with 14 concentric, hard silver rings electro deposited into machined plastic blank. Dovetail locks rings in place. Machined blank insures accuracy. Diameter approx. 11", thickness approx. 5/16".

⇨ An assembly with 30 rings of various widths to accommodate various current requirements. Unit is approx. 4-5/16" long, designed for flange mounting.

⇨ Cylinder type assembly approx. 3¼" long with 24 hard silver rings. 1⅜" O.D. with wall thickness less than ¼".

⇨ Cylindrical assembly with 25 rings. Three wide rings accommodate large contact area brushes for high current capacity. Length 14", O.D. approx. 5⅛".

ELECTRO TEC is now tooled up, with new expanded facilities for production of large Slip Ring Assemblies to exact customer specification. Sizes range up to 24" in diameter, either cylindrical or disc type.

The exclusive ELECTRO TEC PROCESS*—the electro-deposition of hard silver rings into an accurately machined plastic blank—consistently yields a high degree of dimensional accuracy, excellent concentricity, and a jewel-like ring finish. This process also eliminates expensive tooling and mold charges, frequently lowers costs to 30% of other methods of manufacture. The silver rings are uniformly hard for long life—75-90 Brinell.

ELECTRO TEC one-piece construction precludes dimensional variation due to accumulated errors. The plastic base is fully cured before rings are plated into it, thus preventing separation of base material from the rings.

ELECTRO TEC LARGE SLIP RING Assemblies are widely used in Radar Equipment, Fire Control Systems, Test Tables and many other critical applications. Light weight combined with rugged durability recommends their use in airborne applications.

Every user knows the ELECTRO TEC reputation for quality and superiority in miniature and sub-miniature slip ring assemblies.

*PATENTS PENDING

Our Engineering Department is available for consultation on any of your slip ring problems without obligation.

AUTOMATIC MANUFACTURING CORPORATION

MANUFACTURERS FOR THE Radio and Television Industry

85 GOUVERNEUR STREET NEWARK 4, N. J. PHONE MUNDOLOT 8-7100

The excellent uniformity and stability of G A & F Carbonyl Iron Powders have enabled us to develop a special process for the production, in extremely large quantity, of a complex tuning core that is the heart of the K-TRAN.

Your product has enabled us to design into our K-TRAN both the high electrical performance and the unparalleled mechanical and climatic stability (otherwise obtainable only in larger and more expensive units) so eagerly sought after by K-TRAN users.

AUTOMATIC MANUFACTURING CORPORATION

Charles W Breedek President

SIZE SIZE SIZE WHEN SIZE IS A FACTOR

— G A & F® CARBONYL IRON POWDERS

THE K-TRAN—made by Automatic Manufacturing Corporation—measures only ¾" across. Yet it is available in RF and IF transformers covering frequency ranges from 20 KC to 30 MC and higher! For its size, it covers the widest range of uses in the IF field—and with unsurpassed stabilities. . . . As indicated, the makers credit K-TRAN's success, in large measure, to the controlled uniformity of G A & F Carbonyl Iron Powders.

Today there are ten types of iron powders made by the Carbonyl Iron Process—with the particle sizes ranging from 3 to 20 microns in diameter. The iron content of some types is as high as 99.6 to 99.9%.

With quite different chemical and physical characteristics, the ten types lend themselves to many different uses—to increase Q values, to vary coil inductances, to reduce the size of coils, to confine stray fields and to increase transformer coupling factors. The Carbonyl Process assures the quality and uniformity of each type.

We urge you to ask your core maker, your coil winder, your industrial designer, how G A & F Carbonyl Iron Powders can increase the efficiency and performance of the equipment or product you make, while reducing both the cost and the weight. We also invite inquiries for powders whose performance characteristics are different from those exhibited by any of our existing types.

This 32-page book offers you the most comprehensive treatment yet given to the characteristics and applications of G A & F Carbonyl Iron Powders. 80% of the story is told with photomicrographs, diagrams, performance charts and tables. For your copy—without obligation—kindly address Department 89.

Information at high speed! "Data the way an engineer thinks" is the key to IRE DIRECTORY classifications. All products are divided into 10 fundamental groups, many of which parallel professional group organization. The grouping plan makes this the fastest working directory you ever used! No components are mixed with test equipment—you turn right to a section where each item belongs.

Yet good engineering detail is maintained. 104 basic classes of products under these ten sectional product directories keep listings from becoming cumbersome, but clearly define products.

Completeness is insured! Most firms make many products in a single classification. Wasteful, eye-confusing relisting of the same firms over and over is quite sensibly solved by using a system of codes under the 104 basic headings which actually provide 608 separate classifications. The result is a more complete picture of each firm's full line, but you travel through fewer listings.

Institute of Radio Engineers

PUBLICATIONS

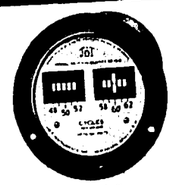
Proceedings of the I.R.E.

A monthly collection of the latest data and theory in the electronic engineering field. Subscription to this invaluable engineering magazine is included as a part of I.R.E. membership dues.

Professional Group Transactions and Newsletters

Many I.R.E. Professional Groups publish periodical information on the latest developments in their respective fields. For further information on these groups and the fields they cover, see pages 238-239.

IRE Directory



Annually, the Institute publishes this directory, containing the names of all I.R.E. members, and the latest available information on the firms and products in the field.

To receive these publications, and other benefits of I.R.E. membership, write today for information to:

The Institute of Radio Engineers

REED FREQUENCY METERS • ELAPSED TIME METERS
SWITCHES, Instrument and Test Equipment Quality: ROTARY, LEVER, TOGGLE
for THE ELECTRONIC INDUSTRY

J-B-T

Model 30-F
Dual Range, Double Window

Model 36-FX-21
21-Reed Meter in 3½" Case

Model 34-FHXX
9-Reed in 3½" Sealed Case

Model 41-FX
Dual Range in 4" Case

Model 15-FHAC
2-Reed in 1½" Sealed Case

Model 33-FP-9M
Portable, Metal Case
TS-328 A/U (400 cy. type) Shown

VIBRATING REED FREQUENCY METERS

Meters illustrated are typical panel mounting or portable—for use where constant or known frequency is important to efficient operation of equipment.

- *Permanently Accurate* within ±0.3% or better at reference temperature, depending on the model. This accuracy is not affected by poor wave form, external magnetic disturbances, or voltage fluctuations.
- *Size and Type for Every Service.* Made in a wide variety of portable and panel case styles, reed groupings and frequency ranges from 12 to 650 cycles and above; 100-130 volts furnished unless otherwise specified.
- *Rugged Construction* of simplified, patented design, with no moving parts to wear out or get out of calibration. Ideal for field and mobile applications.
- *Suitable for Electronic Circuits* because of relatively low power consumption and J-B-T reeds with high Q and sharp, immediate response.

3½" and 2½" SEALED Types

3½ inch FHXX Meters sealed, glass-to-metal construction with solder terminals, meet or exceed the sealing and electrical requirements of JAN-1-6 and MIL-M-6A including the 3000 volt breakdown, and use the front mounting dimensions specified. Max. barrel diameter, $2^{11}/_{16}$"; 2⅞" overall depth behind flange. While not regularly stocked, these meters are in volume production. New 2½" meters Model 21-FHXX available on special order.

1½" SEALED Types

Model 15-FHAC (illustrated half actual size). 60 and 400 cycles, 2 reeds, 8-10 volts, for cathode follower circuit. Widely used on audio oscillators to standardize output. Meets intent JAN-1-6 and amendments on sealed meters. Barrel, 1½" diameter; detachable flange, 2.094" diameter; solder terminals.

Model 15-FH Series (not illustrated)—Same case, sealed, 5 reeds, 58-62 cycles, 100-130 volts, or 390-410 cycles, 100-130 volts. Variations such as 6 reeds or 25 cycles available on special order.

ASK FOR CATALOG 354-R

ELAPSED TIME METERS

For Maintenance, Tube Life Data, and Operating Time Records—on Motor Generators, Transmitters, Receivers, Rectifiers, Test Set-ups, etc.

Model 31-EX (illustrated) also known as running-time or total time meter, registers in 1/10 hours to 9,999.9 hours, then automatically resets. Normally stocked for 60 cycles, 110-130 volts. 3½" standard meter mounting. Variations such as 50 cycles; 230 volts; 0-99,999 hours; 3" rectangular case; and readings in minutes available on special order.

SEALED TIME METERS

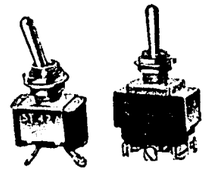
Model 31-EHXX—Completely sealed meter, reading 0-9,999.9 hours, same as Model 31-EX above. Glass-to-metal construction, solder terminals, and 3½" detachable flange, all match XX metal frequency meter case.

Model 33-EHXX — Operates on 400 cycles, 110-125 volts, to read 0-9,999.9 hours in 1/10 hour steps. It is presently made only in 3½" flange sealed metal case, 2¾" diameter, 4" deep behind panel.

Model 21-EHXX—New. 2½" flange, sealed, full size counter.

FREQUENCY — TIME METERS

Combination Reed-Type Frequency — Elapsed Time Meters—One Meter Does the Work of Two.



Model 31-FE (illustrated) pioneered by J-B-T, saves panel space and cost, and encourages periodic maintenance; 3¼" flange, metal case, $4^{11}/_{32}$" overall depth, standard. 3½" case known as 31-FEX-1 supplied on custom orders. 5 reeds, 60 cycle range, standard; 7, 9, 11 reeds or 50 cycle range on special order.

DISTRIBUTOR SERVICE

Standard J-B-T items are available through authorized electronics parts distributors.

TOGGLE SWITCHES FOR JAN-S-23

J-B-T now manufactures toggle switches of the quality required by Specifications JAN-S-23 and MIL-S-6745. The complete series ST-40 and ST-50 with screw terminals, and ST-42 and ST-52 (with solder lugs) are available. Solid silver contacts and rocker arms, rugged construction, and a tested combination of lubricant, plating and materials enable these switches to exceed many of the requirements. Ask for Bulletin TS-4. A convenient adhesive-backed list of Preferred Types (PPL-23-ST) also will be sent upon request. Smaller, lower capacity toggle switches, such as ST-12, -13, -22, -23, -26 and -27, also designed for JAN-S-23 will be released for sale in the third quarter of 1954. Your inquiries are invited.

MOLDED ROTARY SWITCHES

Shorting and Non-Shorting...14 or 20 Positions ...1 to 6 Decks.
All moving contacts enclosed — eliminates dirt and corrosion...contact lugs permanently integrated into switch assembly...sturdy construction with 3-post deck suspension, double-grip collector arms, and rectangular drive shaft through decks for precision indexing...interchangeable, electrically and mechanically with J-B-T Series SS-14 and 20 position Laminated Switches.
Carrying capacity (not make-and-break): 1 amp.; maximum momentary, normal 5 amp.; maximum voltage between contacts and ground, 1000 volts R.M.S.; between decks and ground, 2000 volts R.M.S. Average contact resistance 0.007 ohms or less. Also available in 6-pole per deck double throw construction.

Model MS-14-2

LAMINATED ROTARY SWITCHES

Used widely in quality test equipment, portable instruments, inspection setups and avionics where trouble-free, dependable performance counts. Two basic types —14 pos. (2" dia.) or 20 pos. ($2^{23}/_{32}$" dia.) give extra contacts in minimum space. One to six decks.

Model SS-14-2

LEVER ACTION SWITCHES

Excellent for test equipment and communications systems, these switches use the same high qaulity parts as the SS-14 series. Bracket mounting holes 1⅛" apart; single deck types may be mounted in groups ¾" between centers; two-deck types, $1^{5}/_{16}$" between centers.

Model SS-14-1L4

These terminals are made of glazed Alumina Ceramic. Lugs and eyelets are hot tinned brass and metallized areas are silver fired on ceramic, copper electroplated and tin fused for soft soldering. Immersion in 60/40 solder at 450°F for 1½ minutes for dip soldering will not injure the metallic coating. For complete information and quotations call, write or wire today.

1955 RADIO ENGINEERING SHOW

MARCH 21-24, 1955

KINGSBRIDGE ARMORY, NEW YORK CITY

GPL has COLOR

COMPLETE GPL-WICKES COLOR TV SIGNAL GENERATING AND TEST EQUIPMENT FOR:
TELECASTING • RESEARCH • PRODUCTION • EDUCATIONAL

GPL now distributes color television operating and testing equipment designed and manufactured by Wickes Engineering and Construction Company, well known pioneers and specialists in this field.

The GPL-Wickes equipment is designed for strict adherence to the requirements of NTSC systems and for convenience in practical use. A careful program of quality control and final testing in the Wickes plant insures accuracy and reliability for research, testing, or on-the-air uses.

This equipment complements the GPL line of monochrome television equipment which has become known for its advanced design and high standards of performance.

COLOR CONSULTATION SERVICE

GPL engineers will be glad to assist in determining your requirements. Color equipment is available in complete packages for station conversion or individual units to meet your requirements, with early delivery.

SPECIFICATIONS ON REQUEST: Write, wire or phone for specification sheets and prices.

The GPL-Wickes equipment available for prompt delivery includes:

INTERLACE SIGNAL GENERATOR
COLOR BAR GENERATORS
COLOR CODER
CONVERGENCE DOT GENERATOR
MULTI-BURST GENERATOR
AMPLITUDE LINEARITY TESTER
VIDEO DISTRIBUTION AMPLIFIERS
PULSE DISTRIBUTION AMPLIFIER
REGULATED POWER SUPPLYS
VECTOR DISPLAY EQUIPMENT
ENVELOPE DELAY TRACER
COLOR VIDEO MONITOR
PHASE CORRECTION NETWORKS
CROSSOVER FILTER

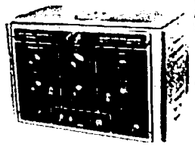
COLOR TV - UHF VHF

TESTING EQUIPMENT

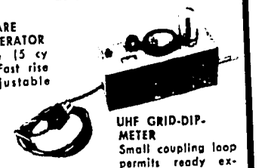
VHF - UHF BALUNS
Complete line of baluns matching 50 or 75 ohms to 300 ohms over VHF and UHF TV Bands with negligible insertion loss and SWR less than 1.2.

Designers and Manufacturers of



UHF WAVEMETER
Unique coupling loop permits coupling to normally inaccessible circuitry. Cavity tuned. No sliding contacts. Microammeter indication.

- UHF TRANSFORMERS
- UHF BALUNS
- UHF WAVEMETERS
- UHF GRID-DIP OSC.
- UHF REFLECTION BOX
- VHF BALUNS
- VHF REFLECTION BOX
- TERMINATIONS
- LO-C OSCILLOPROBE
- SQUAREWAVE GENERATOR
- NOISE FIGURE TEST SET
- VIDEO LINE AMPLIFIER



LO-C OSCILLOPROBE
Probe Head and Wide Band Amplifier (10 mc)
Provides negligible circuit loading (less than 2mmf)
Greatly extends usefullness of any oscilloscope.

LA-2 VIDEO LINE AMPLIFIER
Specifically designed to handle color signals without compression. Choice of output polarity. Ideal for production line use.

HF-10 SQUARE WAVE GENERATOR
Wide range (5 cy to 5 mc) Fast rise time. Adjustable symetry.

UHF GRID-DIP-METER
Small coupling loop permits ready exploration of tuning elements. Invaluable aid in design of UHF tank circuits.

A Complete Catalog available on request. Write RD7

Hughes *Fusion-Sealed* Germanium Diodes

ACTUAL DIMENSIONS DIODE BODY: *0.265 by 0.130 inches (maximum)*

SHUNT CAPACITANCE: *0.5 μμf (maximum)*

AMBIENT OPERATING TEMPERATURE RANGE: *−78°C to +90°C*

Hughes Point-Contact Germanium Diodes are fusion-sealed in a one-piece, gas-tight glass envelope . . . impervious to moisture, fumes or other external contaminating agents. The flexible dumet leads are especially suitable for spot-welding; or they can be iron- or dip-soldered as close as ¼ inch to the diode body—without special precautions.

The germanium crystal is permanently bonded to one lead, the cat whisker is welded to the other, and the point of the cat whisker is welded to the crystal. Hughes diodes are highly resistant to shock and vibration. *Positive* mechanical stability is achieved without risking contamination from fluxes, waxes or impregnants. And—*each diode is thoroughly tested* to ensure the stability of its electrical and physical characteristics. All this means: sturdy, highly reliable diodes.

TYPES—The Hughes line of diodes comprises standard RETMA, JAN, and many special types. Special types are produced according to customer specifications and are tested at high or low temperatures . . . for specific recovery time . . . for matching in pairs or quads.

ELECTRICAL SPECIFICATIONS AT 25° C *unless otherwise indicated*

DESCRIPTION	RETMA or Hughes Type	Clip-in Hughes Type	Peak Inverse Voltage† (volts)	Absolute Maximum Inverse Working Voltage (volts)	Minimum Forward Current @ +1V (mA)	Maximum Inverse Current @ −50V (mA)	Maximum Inverse Current Other (mA)	Other Characteristics
HIGH PEAK	1N55B	HD 2052	100	150	5.0		0.500 @ 150V

JAN TYPES	1N126*		75	60	5.0	0.850	0.050 @ 10V	Non-JAN equivalent, HD2070; clip-in, HD2066
	1N127**		125	100	3.0	0.300	0.025 @ 10V	Non-JAN equivalent, HD2071; clip-in, HD2067
	1N128***		50	40	3.0		0.010 @ 10V	Non-JAN equivalent, HD2072; clip-in, HD2068
	1N198		100	80	5.0	0.250	0.075 @ 10V	
					These values tested 100% at 75°C			
COMPUTER TYPES	1N191	HD 2077		§	5.0	400K Ω min. between −10 and −50V @ 55°C§		Back resistance recovers to 50K Ω and 400K Ω (200K Ω for 1N192) in 0.5 μsec and 3.5 μsec max., respectively.‡
	1N192	HD 2078		§	5.0	200K Ω min. between −10 and −50V @ 55°C§		0.2 μsec recovery time.○
	HD2013				50 @ 1V & 1 @ 0.35V		0.120 @ −3V	0.2 μsec recovery time.○
	HD2014				50 @ 1V & 1 @ 0.35V		0.60 @ −6V	
UHF MISCELLANEOUS	HD2016A				UHF MIXER DIODE			
	HD2051		125	100	4.0	0.050		1N63 equivalent.

†That voltage at which dynamic resistance is zero when back voltage rises linearly at 90*v*/sec.

‡Back Recovery Time is measured with a forward pulse of 30mA, followed by a reverse pulse of 35 volts. Loop resistance of test circuit 2500 Ω max.

○Recovery time is that point at which the diode voltage reaches −1*V* after the initiation of a 6*V* back pulse through 20K Ω from an initial 3 mA forward bias. Total shunt capacitance is 20 μμf.

§Tested at 55°C. Test voltage is a continuous 60 cps sine wave. Peak Reverse Voltage across the diode is 70*V*. Peak Forward Voltage not less than +2*V* or Peak Forward Current not less than 20 m.*A*, whichever occurs first.

*Formerly 1N69A. **Formerly 1N70A. ***Formerly 1N81A.

Descriptive Bulletin SP2A is available on request.

...A COMPLETE CAPACITOR LINE OF TIME-TESTED QUALITY!

ILLINOIS electrolytic capacitors for every application—design or production.

Newest addition to the ILLINOIS line are the MINIATURE and SUB-MINIATURE electrolytic capacitors illustrated at the left with pencil for size comparison.

These Types IMT and SMT capacitors are especially designed for use with transistors, printed circuit applications, portable equipment and wherever minimum capacitor size and weight are required. Case styles are of ⅛", 3/16", ¼" and ⅜" diameters.

Available in capacity ranges from ½ to 100 mfd and from 3 to 75 W.V.D.C. All aluminum construction, hermetic sealing, tinned brass connecting leads, operating temperature range—20°C to +65°C.

Write for new ILLINOIS catalog—now!

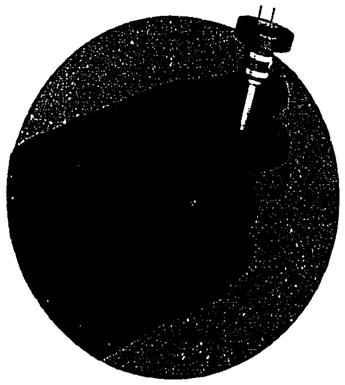
the stiffer the "specs" the better we like it



Virtually every project in the electronics manufacturing field involves operations within the scope of the D. E. Makepeace Company. As specialists, Makepeace is able to supply electronic assemblies for components which meet the most exacting specifications.

WAVEGUIDE TUBING AND MICROWAVE ASSEMBLIES

Long experience in the manufacture of precision drawn waveguide tubing, enables Makepeace to meet tolerances much tighter than specified in MIL-T-85-B. This precision is maintained in the production of components such as rotary joints, crystal mixers, antenna feeds, and many specialized assemblies to meet various requirements.

We shall be glad to confer with you on the design and manufacture of prototypes and production runs. Our exceptional testing facilities are at your disposal.

COLLECTOR RINGS AND BRUSHES

Because Makepeace pioneered in the production of solid and laminated precious metal slip rings, a range of sizes and special alloys is available to meet almost any requirement for space, weight, electrical noise, torque, or power handling capability.

In addition to the rings and brushes themselves, Makepeace has utilized its experience in this field in the design and manufacture of complete self contained ring and brush assemblies. The design of such a unit often poses unusual problems. The Makepeace engineering group having met many of these problems, can plan and manufacture a unit to meet your specifications. Before such an assembly is shipped, it is checked out and completely tested for electrical noise, voltage breakdown, impedance matching, power handling capability, and other test specifications as required.

do YOU have a RADOME problem?

Is radar performance vital to the proper tactical operation of your airplane?
Are you certain that your radar antenna will meet your design AFTER it has been covered by a radome?
Do you have critical requirements for microwave transmission?—Do you have critical requirements for microwave transmission?—Reflection?—Boresight shift?
Antenna pattern distortion?—Reflection?—Boresight shift?
If so, we invite you to consult—

Micronics INC.

Our staff has been closely associated with the design, development, and test of radomes and antenna housings for—

U. S. Air Force	*Brunswick-Balke-Collender*	*Lockheed*
U. S. Navy	*Convair*	*Martin*
Canadian Air Force	*Dalmo-Victor*	*Northrop*
French Navy	*Douglas*	*R. C. A.*
A. V. Roe	*Emerson*	*Republic*
Bendix	*Fairchild*	*Westinghouse*
Boeing	*Grumman*	*Zenith and other major companies*

We will assume complete responsibility for the performance of *your* radome, since we have the equipment and personnel to provide you with the most complete radome service in the world. For specific details, contact—

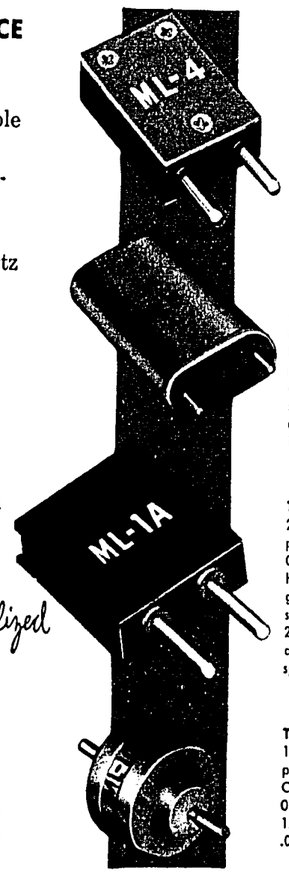
ML-200 Series
Crystals for color television are available to your specific calibration for either the ringing or oscillator circuit. This new design provides hermetic seal at an economical cost.

NOW IN PRODUCTION...

Newly-Designed CRYSTALS for COLOR TELEVISION

MIDLAND is ready *now* to supply you in quantity with color TV crystals to your exact specifications...and to advise with you on any phase of this subject.

MIDLAND MINIATURES
Midland has developed, and is expanding, a new series of crystal units which will comprise the MIDLAND MINIATURE line. Their small glass enclosures insure true hermetic seal and long-term stability.



Midland CRYSTALS

PAY OFF IN PERFORMANCE

The quality of Midland Crystals—which is another way of saying the completely dependable job they will do for you—is assured by exacting tests and controls through every step of processing. The finest precision equipment and most advanced techniques known to the industry are used by Midland from selection of raw quartz to final sealing of the crystal.

That's a big reason why Midland has climbed to its present position as the world's largest producer of quartz crystals for use in 2-way communications and other electronic devices.

Midland's engineering staff is ready to help in any project involving the use of crystals.

Type ML-4 Range 1.0 - 10.0 mc. Supplied per mil Type CR-5, CR-6, CR-8, CR-10 when specified. Holder is phenolic, gasket sealed. Holder size is 1⅛ x 13/16 x 7/16 with .093" diameter pins ½" long spaced .486".

Type ML-13 Units of this type are currently undergoing tests on experimental basis. The unit is hermetically sealed. Pin dimensions are the same as our Type ML-6. Height of can is 1½-inch.

Type ML-1A Range 2.0 - 15.0 mc. Supplied per mil Type CR-1A when specified. Holder is phenolic, gasket sealed. Holder size is 1¼" x 1⅛" x 27/64" with .125" diameter pins ⅝" long, spaced at .500".

Type ML-10 Range 15.0 - 50.0 mc. Supplied per mil Type CR-24 when specified. Over-all length is 1.055". Pin contacts, .062" diameter.

Whatever your Crystal need, conventional or specialized When it has to be exactly right, contact

Classifications with a System!

THE IRE Directory Product Classifications have both a pattern and a purpose. They differ widely from most product indexes, deliberately. They aim to organize the hundreds of products and services of a complex technical industry according to the way engineers think. To this end, the product grouping follows the pattern of the IRE Professional Groups, broadly. The result is a division of all products and services into ten fundamental indexes into which 104 basic classifications have been organized.

For detailed identification, these 104 products and services, grouped in the 10 indexes, are further defined into over 600 named products. We have tried to avoid oversimplication, and a tremendous amount of information is given by our product number system. But, the basic indexing adds speed. Purely alphabetical directories are as slow and cumbersome as a telephone book. IRE engineers have liked our system better!

You will note that we here differ from most directory compilers, for we do not mix meters with motors simply for alphabetical reasons. Products used in "Audio" whether components or complete apparatus form the first fundamental group. Yet, the same manufacturer and product may also appear in the "Component Parts" section. This system gives subject grouping for speed and convenience. A directory should aid a man who has forgotten some detail, or product name. Ours helps by grouping products as one would *think*.

For safety, an alphabetical "terminology" index is given, preceding the product system in the pink pages introducing the "firms and products" section. You will note also that after each firm, its products are listed by number code in the alphabetical list, and that subclassifications shown by number code in the product indexes give much detail. Just a little study of the system will help you get great good from this book.

The IRE DIRECTORY is 10 Indexes in one book.

Check list of RCA Tube Division Products and Services

ELECTRON TUBES

- **Receiving Tubes**
  - Detectors
  - Oscillators
  - Converters and Mixers
  - Power Amplifiers
  - Voltage Amplifiers
  - Electron-ray types
  - Rectifiers
- **Power Tubes**
  - High, Medium, Low Power AF, RF, VHF, UHF
- **Industrial Receiving Tubes**
  - "Special Reds"
  - "Premium" Types
  - "Pencil" Triodes
  - Computer Types
  - Voltage Reference and Regulator Types
- **Cathode-Ray Tubes**
  - Kinescopes (Black & White)
  - Kinescopes (Tricolor)
  - Oscillographs
  - Special-purpose
- **Microwave Tubes**
- **Thyratrons and Ignitrons**
- **Phototubes and Multiplier Phototubes**
- **Rectifiers**
  - Vacuum, Gas, Mercury-Vapor Types
- **TV Camera Tubes**
  - Image Orthicons
  - Vidicons
  - Monoscopes
  - Iconoscopes
- **Special Types**

SEMICONDUCTOR DEVICES

- **Transistors**
- **Crystal Diodes**

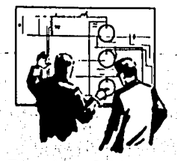
TEST EQUIPMENT

- **Cathode-Ray Oscilloscopes**
- **RF and AF Signal Generators**
- **TV Calibrator**
- **TV Sweep Generators**
- **Color-TV Test Equipment**
- **VoltOhmysts®**
- **Ultra Microammeter**

BATTERIES

- **Radio A and B Types**
- **Industrial and Special Types**

Which items can we put to work for you?



ELECTRONIC COMPONENTS

- **Radio and TV Components**
- **Loudspeakers**
- **Custom-Built Components**
- **Components for Military, Industrial, and Broadcasting Applications**

COLOR TV

RCA tricolor kinescopes; receiving, transmitting and camera tubes; components; and test equipment are ready for your color-TV designs.

SERVICES

- **RCA Application Engineering Service**—designed to assist equipment manufacturers in product development.
- **RCA Field Engineering Service**—provides "on the spot" technical assistance and liaison between RCA and customer.
- **RCA Sales and Customer Service**—seasoned representatives within convenient reach, ready to extend day-to-day personal service.
- **RCA District Offices**—located in Harrison, Chicago, and Los Angeles, to provide prompt service in your territory.
- **RCA Distribution**—bulk tube stocks are maintained in warehouses strategically located for quick service.
- **RCA Technical Literature**—the most authoritative in the field, covers characteristics and operating conditions of RCA tubes and components.

For information on any RCA Tube Division product, write RCA, Commercial Engineering, Section F35Q, Harrison, N. J., or contact your nearest RCA District Office:

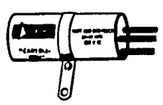
The security of experience. Pyramid has more experienced personnel in years of actual designing and manufacturing of capacitors than any other manufacturer.

The advantage of leadership. Pyramid supplies capacitors to all leading TV set manufacturers, and to ALL Branches of Government. Being so close to initial product developments, the design engineer, purchasing agent and production man benefit by new developments in the Pyramid line.

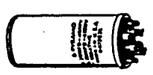
The control of specially designed facilities. Pyramid is the only manufacturer of capacitors whose plants were planned and built specifically for the entire manufacturing process of capacitors from drawing board conception through reception of raw materials, fabrication, packaging and shipment.

what is available from Pyramid



commercial
MIL-SPEC
capacitors

The guarantee of one standard. All Pyramid capacitors are one quality, made of the same quality materials demanded by rigid military specifications. Pyramid capacitors have a low leakage factor due to the non-hygroscopic insulating material used on all production. Pyramid delivers the best at no premium.



A complete line of capacitors—full ranges in all ratings and types.

Institute of Radio Engineers

PUBLICATIONS

Proceedings of the I.R.E.

A monthly collection of the latest data and theory in the electronic engineering field. Subscription to this invaluable engineering magazine is included as a part of I.R.E. membership dues.

Professional Group Transactions and Newsletters

Many I.R.E. Professional Groups publish periodical information on the latest developments in their respective fields. For further information on these groups and the fields they cover, see pages 238-239.

IRE Directory

Annually, the Institute publishes this directory, containing the names of all I.R.E. members, and the latest available information on the firms and products in the field.

To receive these publications, and other benefits of I.R.E. membership, write today for information to:

The Institute of Radio Engineers
1 East 79th St.
New York 21, N.Y.

Information at high speed! "Data the way an engineer thinks" is the key to IRE DIRECTORY classifications. All products are divided into 10 fundamental groups, many of which parallel professional group organization. The grouping plan makes this the fastest working directory you ever used! No components are mixed with test equipment -you turn right to a section where each item belongs.

Yet good engineering detail is maintained. 104 basic classes of products under these ten sectional product directories keep listings from becoming cumbersome, but clearly define products.

Completeness is insured! Most firms make many products in a single classification. Wasteful, eye-confusing relisting of the same firms over and over is quite sensibly solved by using a system of codes under the 104 basic headings which actually provide 608 separate classifications. The result is a more complete picture of each firm's full line, but you travel through fewer listings.

Why 38,799 Engineers have joined The Institute of Radio Engineers

BENEFITS

Get to know your fellow engineers—attend section and professional group meetings—keep up with engineering progress.

o o o

Get 12 great issues of Proceedings of the IRE. . . . A working textbook up-to-the-month on practical radio-electronic engineering.

o o o

Get the annual IRE DIRECTORY . . . an industry between covers . . . men, products, firms.

o o o

For membership information, write to:

Eyes in the night . . . certain as a pendulum . . . to pierce the veil of time and distance. Thus we have the moving eye—symbol of knowledge – on the ever predictable pendulum.

eyes in the night

The victory over time and darkness is certain with Kollsman instruments. Certain because of our quarter century dedication to accuracy in controls and instrumentation.

Today our activities encompass four fields:

AIRCRAFT INSTRUMENTS AND CONTROLS
OPTICAL PARTS AND DEVICES
MINIATURE AC MOTORS
RADIO COMMUNICATIONS AND NAVIGATION EQUIPMENT

Our manufacturing and research facilities . . . our skills and talents, are available to those seeking solutions to instrumentation and control problems.

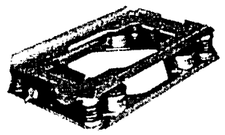
1955 RADIO ENGINEERING SHOW

MARCH 21-24, 1955

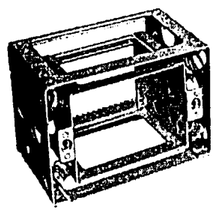
KINGSBRIDGE ARMORY, NEW YORK CITY

ROBINSON
All-Metal Vibration and Shock Mounts for Airborne Electronic Equipment...



Outstanding feature of Robinson Mounts is the employment of resilient, primary load-carrying cushions of metal wire (MET-L-FLEX). These MET-L-FLEX cushions are fabricated in such a way that all wires are continuous from top to bottom. They are inherently and permanently damped, and do not drift, pack down or wear out.

Robinson Mounts completely lack the faults and failings of outmoded mountings that incorporate rubber, organic or synthetic materials.

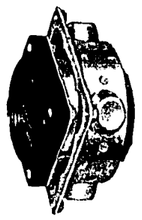


ROBINSON COMPLETE *ENGINEERED* MOUNTING SYSTEMS

For maximum protection, most problems of vibration and shock can best be overcome by a complete Robinson Engineered Mounting System. When such a system is designed for the particular equipment with careful regard to the acceleration forces, frequency characteristics, and other requirements, the greatest possible efficiency is achieved. At the same time, a Robinson Engineered System can effect decided economies. It not only permits simplified construction and "de"ruggedization of equipment, but also contributes to far longer useful life, and eliminates the need of replacements.

Model 1128-2

Single stage mounting system incorporating these Robinson design features: 1) light weight; 2) outstanding stability; 3) high damping; 4) one piece base plate with only four attachment holes; 5) minimum vertical height; 6) complete unit ready for equipment installation.

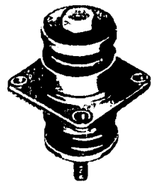


Model 728-4

An all-attitude engineered system designed and used for mounting an Antenna Coupler. Excellent damping and snubbing in all directions. Suitable for any small sensitive equipment requiring maximum protection. Provides for easy removal and accessibility of equipment.

Model K130

Center-of-Gravity type mounting designed for individual instruments such as the Oxygen Flow Indicator. This mount is the first of its kind to be successfully installed in important military aircraft. Ideal for instruments not provided for on the main instrument panel.



EXAMPLES OF ROBINSON *ENGINEERED* UNIT MOUNTS

Series No. 1202

Cup type mount with unusual stability and close limiting action provided by extra thick top and bottom MET-L-FLEX buffer pads within the housing. These buffers provide a gradual increase in stiffness plus high damping. *Natural frequency:* 15-30 c.p.s. (vertical). Axial to lateral stiffness ratio selected to provide for maximum isolation compatible with stability.

Series No. 930

Plate type, double-acting mount. Isolates vibration and shock for positive, negative and radial loads. Particularly adapted to installations where mounts can be located about in the plane of the C.G. and where mounting or missile attitude may vary. *Natural frequency:* 12-15 c.p.s. Higher stiffnesses available.

Series No. 809

A small plate type mount, low in installation height, designed to isolate vibration and shock for positive, negative and radial loads. It is particularly adaptable for the mounting of equipment in cramped spaces. *Natural frequency:* 25-30 c.p.s. This assures a high degree of stability to the mounted equipment and effective vibration isolation at high frequencies.

Various adaptations available to meet your particular dimensional and load requirements.

For detailed information, write us, outlining your requirements.

INSTRUMENT CORPORATION
OF AMERICA

slip ring & commutator assemblies

One-piece construction* assures high accuracy and super-dependability to the most rigid specifications.

Proven for performance in precision instruments and equipment including SYNCHROS, GYROS, RADAR, FIRE CONTROL, TEST TABLES and other CRITICAL APPLICATIONS

[illegible] are gained [illegible] Instrument Corporation of America assemblies are specified with confidence. One-piece, unitized construction eliminates dimensional variation due to accumulated errors, provides jewel-like finish, uniform ring hardness and reduced weight. Engineering "know-how" resulting from years of specialization and continuous collaboration with leading manufacturers all over the world is at your immediate service.

TYPICAL SPECIFICATIONS

SIZES: .035" to 24" Diameter, Cylindrical or Flat

CROSS-SECTIONS: Ring Thickness .005" to .060" or More

FINISH: 4 Micro-Inches or Better

BREAKDOWN: 1000 V or More Hi-Pot Inter-Circuit

RING HARDNESS: 75 to 90 Brinell

SURFACE PROTECTION: Palladium and Rhodium, or Gold Prevent Tarnish, Minimize Wear & Noise

The 1954 DIRECTORY is—

Better

More Engineers Listed than ever before! IRE membership continues to gain and gain! More engineers (now 38,000) are listed, and therefore have a direct, personal interest in this DIRECTORY.

Up-to-dateness is almost a mania with IRE DIRECTORY compilers! Membership lists are corrected up to May 30th. Industry lists, compiled and classified by high speed IBM sorting methods are accurate to June 15th. No firm's report is older than 18 months.

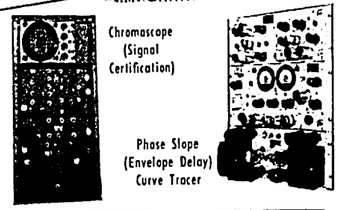
Information at high speed! "Data the way an engineer thinks" is the key to IRE DIRECTORY classifications. All products are divided into 10 fundamental groups, many of which parallel professional group organization. The grouping plan makes this the fastest working directory you ever used! No components are mixed with test equipment—you turn right to a section where each item belongs.

Yet good engineering detail is maintained. 104 basic classes of products under these ten sectional products directories keep listings from becoming cumbersome, but clearly define products. Overlapping listings are skillfully eliminated. Simplicity makes the book easy to work with—insures faster finding of facts when forgotten. Thus the faults of terminology listings are avoided.

and Better

Completeness is insured! Most firms make many products in a single classification. Wasteful, eye-confusing relisting of the same firms over and over is quite sensibly solved by using a system of codes under the 104 basic headings which actually provide 608 separate classifications. A more complete picture of what each firm's full line is results, but you travel through fewer listings. The "Copp Principle" of Directory indexing makes these lists wide, well marked highways to information—fast.

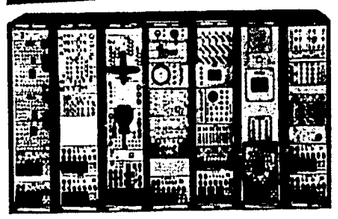
3000 Firms listed. The alphabetical directory gives a clear definition of these firms by showing any or all of the fundamental groups in which these firms belong after every name.



Machol Edge Index is just one more modern service to help the user find information fast.

Ads positioned with reason! In a DIRECTORY where ads play an important part in supplying information the user wants and needs, it makes good sense to cross-reference every advertiser in each listing so that the user can quickly find more detail. Ads are also placed facing company alphabetical listings, or in in the product section in which they properly belong. No effort is spared to "organize" ad information.

and Better!



More advertisers—more information! Never before have so many advertisers served IRE readers with so much information! The advertisers' list this year is truly a "social register" of this great industry.

TELECHROME THE ONLY COMPLETE LINE of EQUIPMENT for COLOR TV

Chromascope (Signal Certification)

Phase Slope (Envelope Delay) Curve Tracer

Full facilities — Transmits, receives, monitors, analyzes composite color pictures

In Color TV instrumentation, no other name means as much as Telechrome . . . because no organization can match Telechrome's 3 years of experience in providing color TV generating, testing and broadcasting equipment to these and other prominent manufacturers, laboratories and broadcasters.

Complete equipment for generating color bars; creating encoded and composite pictures from transparencies; color signal certification; transmission, reception, monitoring, and analysis of color pictures — literature on these and more than 100 additional instruments for color TV by TELECHROME are available on request.

DELIVERY 30 DAYS

TELECHROME INCORPORATED

Stupakoff

Metallized

CERAMICS

Stupakoff specializes in the application of metal to ceramic parts for a variety of purposes, such as metallized ceramic induction coils for radio receivers and transmitters; metallized ceramic shafts for air-tuning condensers; metallized plates for fixed rigid assemblies; printed circuits; ceramic trimmer condensers; terminals and terminal boards; strain and lead-in insulators; and many other ceramic-to-metal products.

Stupakoff high-precision ceramic assemblies offer many opportunities to reduce costs, increase production and improve electrical and electronic equipment. Further details will gladly be sent upon request.

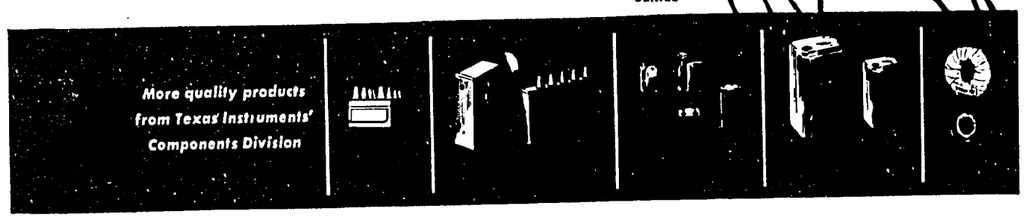
WITH
TEXAS
INSTRUMENTS
SUBMINIATURE
TRANSFORMERS

All transformers shown ACTUAL SIZE



T/I announces 32 new subminiature transformers . . .

. . . for *transistor* and other miniaturization applications. Texas Instruments — also a leading transistor manufacturer — has applied its precise instrument standards in producing both transformers and transistors to bring you this first complete line of subminiature transformers. Behind every TI product are years of experience in meeting the exacting requirements of geophysical and military electronic equipment and components. This experience gives you added assurance of the reliable performance of these new transformers.

Input, interstage, choke, and output types are available in four size series ranging from less than 3/8 inch cubed (one milliwatt output) to slightly less than one inch cubed (over 100 milliwatts). Each series is manufactured in both open and cast construction, making a total of 16 basic types . . . 32 models. Designed for use in the audio and ultrasonic frequencies, these subminiatures will operate over a temperature range of —25° C to 100° C. with the cast units being particularly resistant to moisture and other environmental contamination. For your special applications, our engineers will design models to your detailed specifications.

Write for literature! Let our sales and design engineers help you with your specific transformer, magnetic amplifier or pulse network problems.

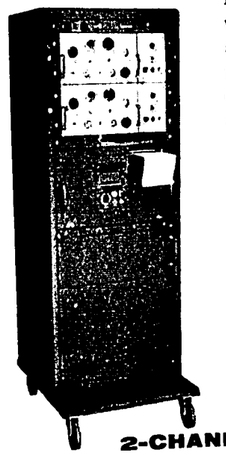
4-CHANNEL



As a graphic example of the design idea that has brought new versatility to industrial recording, a Carrier Preamplifier (A) is shown above in position to plug into a Driver Amplifier in framework with Power Supply (B) which are normally already in place in the Basic Cabinet Assembly.

The identical design principles of the four-channel system are provided in the two-channel, the only difference being the number of channels.

fits your oscillographic recording need?

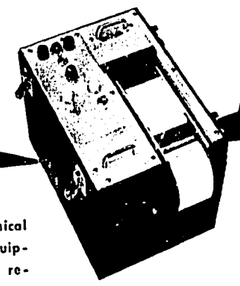
Sanborn "150" Recording Systems that put to use the original design concept of amplifier interchangeability (illustrated at the left) start with either a four-channel or two-channel standard Basic Assembly, to which the user adds whatever selection or combination of pre-amplifiers (A) are needed for his recording problem. The standard Basic Assemblies comprise a metal Cabinet, Recorder, and a built-in Driver Amplifier and Power Supply (B) for EACH channel. Presently available Preamplifiers are: AC-DC, Carrier, DC Coupling, Servo Monitor, Log-Audio, and Low Level Chopper.

Advantages common to ALL Sanborn Recorders are: inkless recording (by heated stylus) on plastic coated strip chart paper, and in true rectangular coordinates . . . high torque galvanometer movement . . . time and code markers . . . numerous paper travel speeds.

2-CHANNEL

"150"

COMPLETE FOUR-CHANNEL SYSTEM FOR USE WITH ANALOG COMPUTERS



This "150" system consists of a Cabinet Assembly, a four-channel Recorder, and *two* dual channel DC Amplifiers. Each amplifier is complete with a common power supply. Each measures and records two separate single-ended signals, at sensitivities between one and one hundred volts per centimeter. The *two*-channel version of this system will comprise Cabinet, *two*-channel Recorder, and *one* dual channel amplifier.

"150"

SINGLE-CHANNEL RECORDER

A compact, lightweight unit for use when only one channel is required — provides permanent, inkless recording in *true* rectangular co-ordinates; *five* paper speeds (5, 10, 25, 50, 100 mm/sec.); *extra* stylus for either manual or remote timing and coding marks. Designed for simple, patch cord connection to *any* of the several "150" preamplifiers (plus driver amplifier and power supply), available soon in portable metal cases.

Ask, also, for a copy of the *Right Angle* — a Sanborn publication devoted to oscillographic recording in industry.

Catalog and technical data on all "150" equipment available on request.

Attenuator Calibration accurate to ± 0·01 db!

PRECISION ATTENUATOR CALIBRATOR

Brief Specification

Frequency range: 2700 — 3800 Mc/s.

Range of measurement: — 90 db relative to 1 milliwatt.

Accuracy: ± 0·01 db.

Wavemeter accuracy: 0·1%.

Modulator output: 800 cps. sq. wave 100V. peak to peak.

Size (on trolley as illustrated) 65″ × 33″ × 56″ high.

This instrument, developed in conjunction with H.M. Radar Research Establishment, is a reference standard for the measurement of attenuation in 'S' band. Extension of the design to cover 'X' band is in progress. Piston attenuators, directional couplers, unidirectional lines, etc., can be calibrated to an accuracy of ± 0·01 db.

Another unique instrument in the Wayne Kerr microwave range is a ***Q Meter*** for measurements in 'S' and 'X' bands with an accuracy of better than 1%.

For details of Wayne Kerr Laboratory instruments, including the transformer ratio arm H.F. and V.H.F. Bridges, contact ***MARCONI INSTRUMENTS LIMITED*** *23-25 Beaver St., New York 4, N.Y., agents in the U.S.A. for*

A program of **SUPPORTING RESEARCH**

The Ramo-Wooldridge Corporation has established a major policy of maintaining a strong program of supporting research in fields related to the company's major technical areas of activity, but not otherwise directly associated with development projects. Approximately ten percent of the total technical effort of the company will be allocated to general research work, to help insure the maintenance of advanced standards of scientific and engineering competence throughout the organization.

Positions are now available for scientists and research engineers to work in the following fields:

- **Information theory**
- **Digital computer theory**
- **Servo theory**
- **Propagation of electromagnetic waves**
- **Microwave resonance phenomena**
- **Magnetic devices— amplifiers, ferrites, memory elements**

The Ramo-Wooldridge Corporation

8820 BELLANCA AVENUE
LOS ANGELES 45, CALIFORNIA

Pacific Semiconductors, Inc., while a new company, is organized around a central group of scientists, engineers, and administrators who have unusual records of recent accomplishment in the semiconductor field. Backed by several millions of dollars of corporate financing, rapid progress is anticipated in the development, manufacture and sale of semiconductor devices of advanced design, including diodes and transistors.

Positions are now available for semiconductor physicists, transistor circuit engineers, sales and application engineers, and experienced semiconductor research assistants.

PACIFIC SEMICONDUCTORS, INC.
6316 W. 92nd Street — Los Angeles 45, California

THIS BOOK DOESN'T

tell all

. . . but it's full of ideas you can use

SUCCESSFUL developments in the electronics field depend mainly on three things: ideas . . . experience . . . facilities. *This book is full of all three.*

Just a short request on your letterhead . . . or the coupon below . . . will bring this valuable book in the mail to you at once.

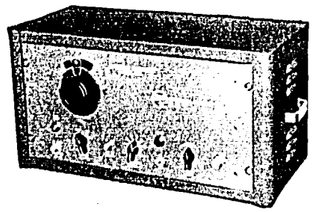
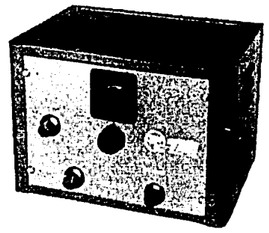
Precision Electronic Systems Radio

Radio Direction Finders for Every Application



Model	Freq. Range	Antenna	Indicator
DFG-1	0.54 – 30 Mc	Crossed adcock with Goniometer	Aural - Null
DFG-2	0.54 – 30 Mc	4-Element spaced aerial	Automatic-Visual
DFM-2	0.54 – 30 Mc	Crossed loops with Goniometer	Aural - Null
DFM-3	0.54 – 30 Mc	Crossed loops with Goniometer	Automatic-Visual
DFG-4	50 – 200 Mc	8-Element Quasi-Doppler	Automatic-Visual

Crystal Controlled Signal Generator

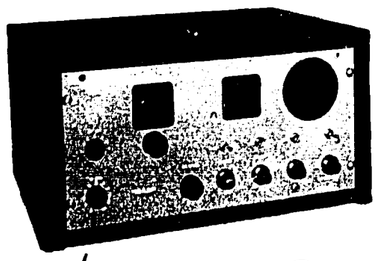


Positive crystal control from 150 Kc to 150 Mc; precision zero-leakage measurement of output level from 1 to 100,000 microvolts; and metered modulation free from FM distortion. These features of the Model 2400 Signal Generator make it possible to preset channels "on-the-head", to know receiver sensitivity without guessing, and to standardize squelch threshold control settings. Ideal for testing and aligning airline radio equipment, radar IF strips and TV tuners. Write for additional information.

Spectrum Generator

SECONDARY FREQUENCY STANDARD

Useful for frequency comparison, measurement and synthesis, from 1 Kc to above 1000 Mc. Oven-controlled crystal oscillator in special circuit provides accuracy better than 1 part per million. Self-contained interpolator. Permits fast, direct measurement of frequency. Harmonics delivered are strong and uniform in amplitude. Standard harmonic intervals are 1, 2, 5, 10, 50 and 100 Kc. Output level for 100 Kc harmonics: 100 millivolts from 100 Kc to 5 Mc; 50 millivolts to 75 Mc; 25 millivolts or more to 85 Mc.



VHF Receiver Converter

MODEL RC 50-200

This converter, in conjunction with a receiver tuned to 30 Mc, provides a general purpose receiver for the 50 to 200 Mc range. Signal sensitivity, frequency stability, and rejection of spurious responses are unusually high. Has an internal 115V, 50/60 cps power supply.

Further inquiry is invited for other product applications in the fields of radio, electronics, servomechanisms, pyrometry and automation.

*TRADE MARK

VHF Receiver

MODEL R-5200

This is a professional quality A.M. and F.M. receiver covering 50 to 200 Mc. The directly-calibrated 72-inch bandspread dial has all portions of the scale masked off except the frequency region of interest. Sensitivity, selectivity, stability and spurious rejection are outstanding.

Something New Has Been Added!

The 21 IRE Professional Groups show the expansion pattern of a modern engineering society in meeting the diversified needs of its members in the ever widening science of radio-electronics.

Membership in a Professional Group is open to any paid-up member of the I.R.E. The cost is only an annual extra publications fee, usually $2. This fee is shown in the descriptions that follow.

An IRE Member may join as many Professional Groups as serve his interest and wishes. Such membership serves to associate him with other engineers of the same specialized interests within the radio-electronic field.

The 21 Professional Groups are listed below, together with a brief definition of each, the name of the Group Chairman, and publications to date. * Means still available.

Aeronautical and Navigational Electronics

The application of electronics to operation and traffic control of aircraft and to navigation of all craft.

Dr. K. Charlton Black, Chairman, Polytechnic Research & Development Co., 55 Johnson Street, Brooklyn 1, N.Y.

Fee $2. 12 Transactions. 4 Newsletters, *4, *5, *6, *8, & *9, and *Vol. ANE-1, No. 1.

Antennas and Propagation

Technical advances in antennas and wave propagation theory and the utilization of techniques or products of this field.

Mr. D. C. Ports, Chairman, Jansky & Bailey, 1339 Wisconsin Ave., N.W., Washington 7, D.C.

Fee $4. 9 Transactions, 1 Newsletter. *4, *Vol. AF-1, Nos. 1, 2; *Vol. AF-2, Nos. 1-3.

Audio

Technology of communication at audio frequencies and of the audio portion of radio frequency systems, including acoustic terminations, recording and reproduction.

Dr. Vincent Salmon, Chairman, Stanford Research Institute, Stanford, California.

Fee $2. 19 Transactions, 4 Newsletters. *5, *7, *10. *Vol. AU-1, Nos. 1-6; *Vol. AU-2, Nos. 1-3.

Broadcast & Television Receivers

The design and manufacture of broadcast and television receivers and components and activities related thereto.

Mr. Earl I. Anderson, Chairman, Assistant Manager, Industry Service Lab., RCA Laboratory Div., 711-5th Ave., New York, N.Y.

Fee $2. 7 Transactions. *1, *2, *3, *5, *6, *7.

Broadcast Transmission Systems

Broadcast transmission systems engineering, including the design and utilization of broadcast equipment.

Mr. Lewis Winner, Chairman, Editor, Television Engineering, 52 Vanderbilt Avenue, New York 17, N.Y.

Fee $2. Convention Report.

Circuit Theory

Design and theory of operation of circuits for use in radio and electronic equipment.

Dr. Chester H. Page, Chairman, National Bureau of Standards, Connecticut Ave., Washington 25, D.C.

Fee $2. 3 Transactions. *1, *2, *Vol. CT-1, No. 1.

IRE's 21 Professional Groups

Communications Systems

Radio and wire telephone, telegraph and facsimile in marine, aeronautical, radio-relay, coaxial cable and fixed station services.

Col. J. Z. Millar, Chairman, Western Union Telegraph Company, 60 Hudson St., New York 13, N.Y.

Fee $2. 3 Transactions. 5 Newsletters. *Vol. CS-1, No. 1, *Vol. CS-2, Nos. 1-2.

Component Parts

The characteristics, limitations, applications, development, performance and reliability of component parts.

Mr. Floyd A. Paul, Chairman, Bendix Development, 166 W. Olive Ave., Burbank, Calif.

Fee $2. Transaction* PGCP*1.

Electron Devices

Electron devices, including particularly electron tubes and solid state devices.

Mr. George A. Espersen, Chairman, Philips Laboratories, Irvington-on-Hudson, N.Y.

Fee $2. 7 Transactions, 3 Newsletters, 2 Technical Bulletins. *1, *2, *4, *Vol. ED-1, Nos. 1-3.

Electronic Computers

Design and operation of electronic computers.

Mr. Harry T. Larson, Chairman, Ramo-Wooldridge Corp., 8820 Bellanca, Los Angeles 45, Calif.

Fee $2. 7 Transactions, 5 Newsletters. *Vol. EC-2, Nos. 2-4; *Vol. EC-3, Nos. 1-2.

Engineering Management

Engineering management and administration as applied to technical, industrial and educational activities in the field of electronics.

Mr. Charles J. Breitwieser, Chairman, RCA Victor Division, Camden, N.J.

Fee $1. 1 Transaction, 8 Newsletters. *1.

Industrial Electronics

Electronics pertaining to control, treatment and measurement, specifically in industrial processes.

George P. Bosomworth, Chairman, Firestone Tire & Rubber Co., Akron 17, Ohio

Fee $2. Transactions, *PGIE-1.

Information Theory

Information theory and its application in radio circuitry and systems.

Dr. William G. Tuller, Chairman, Melpar, Inc., 452 Swann Ave., Alexandria, Va.

Fee $2. 3 Transactions, 1 Newsletter. *2, *3.

Instrumentation

Measurements and instrumentation utilizing electronic techniques.

Mr. R. L. Sink, Consolidated Engineering Corp., 300 N. Sierra Madre Villa, Pasadena, Calif.

Fee $1. 3 Transactions. *2, *3.

Medical Electronics

The application of electronics engineering to the problems of the medical profession.

Dr. J. F. Herrick, Chairman, Mayo Clinic, Rochester, Minn.

Fee $1. 1 Transaction. 3 Newsletters. *1.

Microwave Theory and Techniques

Microwave theory, microwave circuitry and techniques, microwave measurements and the generation and amplification of microwaves.

Mr. W. W. Mumford, Chairman, Bell Telephone Laboratories, Whippany, N.J.

Fee $2. 4 Transactions. *Vol. MTT-1, No. 2; *Vol. MTT-2, Nos. 1-2.

Nuclear Science

Application of electronic techniques and devices to the nuclear field.

Dr. Lloyd V. Berkner, Assoc, Universities, Inc., 350 5th Ave., New York 1, N.Y.

Fee $2. Transactions, 3 Newsletters.

Quality Control

Techniques of determining and controlling the quality of electronic parts and equipment during their manufacture.

Mr. Leon Bass, Chairman, Manager, Quality Eng., Jet Eng. Dept., General Electric Co., Cincinnati 15, Ohio.

Fee $2. 3 Transactions, 1 Newsletter. *1, *2, *3.

Radio Telemetry and Remote Control

The control of devices and the measurement and recording of data from a remote point by radio.

Mr. Martin V. Kiebert, Jr., Chairman, P. R. Mallory & Co., Inc., Tuner Div., Indianapolis 6, Ind.

Fee $1. Transactions, Newsletter.

Vehicular Communications

Communications problems in the field of land and mobile radio services, such as public safety, public utilities, railroads, commercial land transportation, etc.

Mr. W. A. Shipman, Chairman, Columbia Gas Sys. Ser. Corp., 120 East 41 Street, New York 17, N.Y.

Fee $2. 4 Transactions, 2 Newsletters. *2, *3, *4.

Ultrasonics Engineering

Ultrasonic measurements and communications, including underwater sound, ultrasonic delay lines, and various chemical and industrial ultrasonic devices.

Mr. A. L. Lane, Chairman, 706 Chillum Road, Apt. 101, Hyattsville, Md.

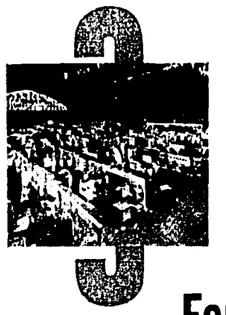
Fee $2. 1 Transaction, 4 Newsletters. *1.

To give you a complete selling program to radio and electronic engineers,

IRE provides all 3!

"Proceedings of the I.R.E"

puts your product promotion monthly before the "thinking and doing" engineers in the fabulous, fast-moving radio-electronic industry. Circulation 41,625 (ABC).



Founded in 1913, "Proceedings of the I.R.E" is the authoritative work-book of America's fastest expanding industry. In it, electronic advances, years ahead of the times, are published every month, thus keeping engineers up to the moment on all that is new in engineering research and application. Its advertising is a constant product parade of the best this industry manufactures. A vital service to all men who specify and buy, it is a proved vehicle for your consistent product promotion—*with prestige!*

IRE DIRECTORY

provides 35,000 IRE members educated to buy and specify with your detailed product data for ready reference all year long.

The IRE DIRECTORY is their working encyclopedia . . . it organizes, codes, simplifies and "indexes for use" a vast and complex industry. They look to its listing of men, firms and products as vital working information. Wherever you find IRE members, you'll find IRE DIRECTORIES close at hand for ready reference. The cost of keeping your product story before 35,000 engineers is less than you'd expect. The price of one page is less than one-half of the three cents postage required to mail 35,000 letters.

RADIO ENGINEERING SHOW

. . . the eye-opening event of each radio-electronic year . . . where over 40,000 engineers come to you for all that's new.

Bringing buyers and sellers face to face to discuss engineering needs and product performance is one of IRE's great services to an industry where understanding is the key to progress. The Radio Engineering Show completes with actual product presentation the balanced promotion package of "Proceedings of the I.R.E" for product promotion and the Radio Engineers Directory for product reference.

For complete facts, ask IRE about all 3!

Engineers are educated to specify and buy.

THE INSTITUTE OF RADIO ENGINEERS

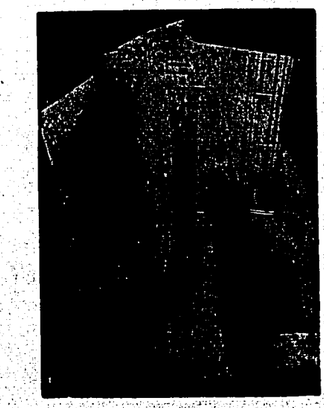
Adv. Dept., 1475 Broadway • New York 36 • BRyant 9-7550

PART III APPARATUS

1. Audio-Products 1 thru 11
2. Broadcasting-Products 12 thru 17
3. Communications-Products 18 thru 25

The first few times you use this

EDGE INDEX



follow the "How to use" instructions slowly—ONE STEP AT A TIME.

After that you will be able to open easily and almost instantly to the section that you seek.

HOW TO USE

1. **With the directory open on the desk, bend the book almost double in your left hand, with your thumb just below this line.**
2. **From one-line or two-line symbol adjacent to the letter or subject you seek run your eye across horizontally to a corresponding page-edge symbol.**
3. **Open there with your right hand.**

IT IS EASIER IF YOU "FAN" OR "RIFFLE" THE LAST FEW PAGES WITH YOUR RIGHT THUMB. THE EDGE INDEXES COVERING THE OTHER DIRECTORIES WILL BE FOUND OPPOSITE PAGES 270, 400 AND 476.

For complete list of products and services, arranged alphabetically for fast reference, see the eight-page pink section preceding page 1.

Classifications with a System!

THE IRE Directory Product Classifications have both a pattern and a purpose. They differ widely from most product indexes, deliberately. They aim to organize the hundreds of products and services of a complex technical industry according to the way engineers think. To this end, the product grouping follows the pattern of the IRE Professional Groups, broadly. The result is a division of all products and services into ten fundamental indexes into which 104 basic classifications have been organized.

YOU will note that we here differ from most directory compilers, for we do not mix meters with motors simply for alphabetical reasons. Products used in "Audio" whether components or complete apparatus form the first fundamental group. Yet, the same manufacturer and product may also appear in the "Component Parts" section. This system gives subject grouping for speed and convenience. A directory should aid a man who has forgotten some detail, or product name. Ours helps by grouping products as one would *think*.

1. **Audio Frequency Equipment** (Products 1 to 11)
2. **Broadcasting Equipment** (Products 12 to 17)
3. **Communications Equipment** (Products 18 to 25)
4. **Component Parts** (Products 26 to 62)
5. **Applications of Electronics** (Products 63 to 70)
6. **Radar, Microwave, UHF** (Products 71 to 74)
7. **Test & Measuring Equipment** (Products 92 to 101)
8. **Services and Materials** (Groups 75 to 91)

   Here we separate the consultant, the fabricating firm, the machine for radio manufacturing, and basic materials from being lost in an alphabetical maze of component and test equipment names.
9. **Education & Publishing** (Groups 102 & 103)
10. **Distribution Functions** (Service 104)

For detailed identification, these 104 products and services, grouped in the 10 indexes, are further defined into over 600 named products. We have tried to avoid oversimplification, and a tremendous amount of information is given by our product number system. But, the basic indexing adds speed. Purely alphabetical directories are as slow and cumbersome as a telephone book. IRE engineers have liked our system better!

For safety, an alphabetical "terminology" index is given, preceding the product system in the pink pages introducing the company index. You will note also that after each firm, its products are listed by number code in the alphabetical list, and that sub-classifications shown by number code in the product indexes give much detail. Just a little study of the system will help you get great good from this book.

The IRE DIRECTORY is 10 Indexes in one book.

1954 I.R.E. DIRECTORY READER SERVICE REPLY CARD

Place a 2¢ stamp on one or more of the perforated cards below, and they will be promptly forwarded to the manufacturers listed on the back. If you prefer to send your specific requirements, a letter would be more advantageous, however be sure to enclose the reply card.

1954 I.R.E. DIRECTORY READER SERVICE REPLY CARD

Below, for your convenience, are six perforated reply cards. Each one has enough space to list three advertisers' names and their page numbers. Forward as many cards as you have questions, and I.R.E. will promptly notify the manufacturer in question to send literature, specifications, and prices to you.

1954 IRE DIRECTORY

A Directory of

1. Audio Frequency Equipment

11 Major Groups
63 Products
Organized by functions for Engineers!

01 Amplifiers.
02 Attenuators.
03 Equalizers.
04 Filters.
05 Industrial Sound Systems.
06 Jacks, Jack Fields & Plugs.
07 Loudspeakers & Headphones.
08 Microphones & Stands.
09 Phonographs, Pick-ups, Record Changers, etc.
10 Recording Accessories & Supplies.
11 Recording Equipment.

The products and services of the Radio-Electronics industry have been organized into ten basic directories following closely the organization of the IRE Professional Groups. But 104 major product groups are numbered throughout.

Always consult the pink pages at the start of the Directory of firms, for a terminology cross-index, or to find products by name. The pink pages list 608 products by name, as well as under the product groups. Page numbers are given for speed.

01. Amplifiers.

5. Decade amplifiers
10. Dynamic noise suppressors
15. Hearing aid
20. High fidelity
25. Inter-coms
30. Phonograph pre-amplifiers
35. Power amplifiers—recording
40. Public address

Classifications with a System!

THE IRE Directory Product Classifications have both a pattern and a purpose. They differ widely from most product indexes, deliberately. They aim to organize the hundreds of products and services of a complex technical industry according to the way engineers think. To this end, the product grouping follows the pattern of the IRE Professional Groups, broadly. The result is a division of all products and services into ten fundamental indexes into which 104 basic classifications have been organized.

For detailed identification, these 104 products and services, grouped in the 10 indexes, are further defined into 608 named products. We have tried to avoid oversimplification, and a tremendous amount of information is given by our product number system. But, the basic indexing adds speed. Purely alphabetical directories are as slow and cumbersome as a telephone book. IRE engineers have liked our system better!

YOU will note that we here differ from most directory compilers, for we do not mix meters with motors simply for alphabetical reasons. Products used in "Audio" whether components or complete apparatus form the first fundamental group. Yet, the same manufacturer and product may also appear in the "Component Parts" section. This system gives subject grouping for speed and convenience. A directory should aid a man who has forgotten some detail, or product name. Ours helps by grouping products as one would *think*.

For safety, an alphabetical "terminology" index is given, preceding the product system in the pink pages introducing the company index. You will note also that after each firm, its products are listed by number code in the alphabetical list, and that sub-classifications shown by number code in the product indexes give much detail. Just a little study of the system will help you get great good from this book.

The IRE DIRECTORY is 10 Indexes in one book.

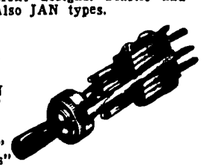
Dependability—Consistent Quality

JACKS



"Littel-Jax — "SF-Jax" — "T-Jax" — "M-Jax" — "Shielded-Jax" — "Extension-Jax". A complete line—all important circuits. Also made to Military Specifications.

PLUGS

"Littel-Plugs"—"Standard Plugs"—"Flat-Plugs". Two and three conductor types, new and different designs. Plastic and metal shells. Also JAN types.

SWITCHES
PUSH BUTTON
ROTARY
LEVER ACTION
"Littel-Switches"
"FF-Switches"
"RS-Switches"
"Lev-R-Switches"
"Telever Switches"

Numerous designs, simple, yet rugged construction. All popular circuits.

"MINI-MIX"
MINIATURE
2-INPUT
AUDIO MIXER

Used with Tape, Wire, Disc Recorders; Amplifiers, Musical Instruments, etc. Various models to mate with different connectors. Write for "Mini-Mix" bulletin.

* "Phono" and "Microphone" Connectors
* Cable Assemblies

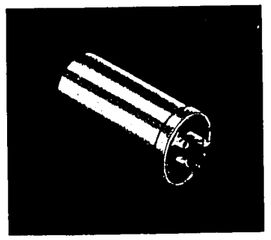
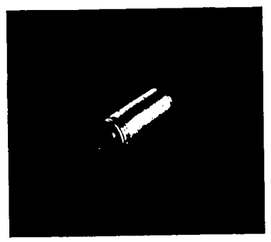
HIGH-FIDELITY SPEAKERS and ELECTROLYTIC CAPACITORS
for the Electronic Industry



by

Magnavox



SPECIALISTS in Quantity Production of QUALITY COMPONENTS

Electrolytic Capacitors

Type FP Sizes 1 inch and 1⅜ inch Diameter

TM Sizes ⅝ inch to 1 inch Diameter

True *High Fidelity Speakers* 4" to 15" Diameter

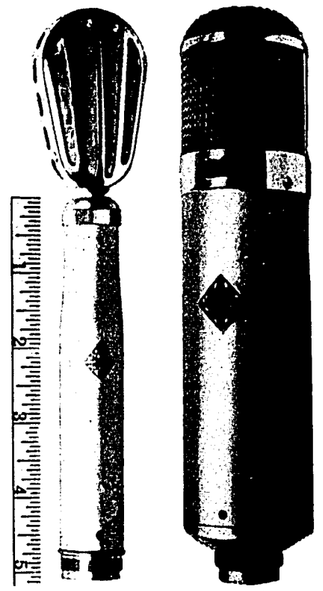
- The Ultimate for every High-Fidelity Application
- Nearly 200 Designs meet your every response requirement
- Exactingly built for dependability and uniformity by Magnavox, Originator of the Dynamic Loud Speaker.

When You Specify Magnavox Components

You Buy Extra Insurance for your products.....at no extra cost!

DEPENDABILITY • ECONOMY • DURABILITY

The Time-Tested Qualities of All Magnavox Components



Particular attention given to all special requirements for Monochrome and Color TV, Radio Receivers, Radio-Phonograph Combinations, Automotive Radios, Coin-operated Phonographs, Electronic Organs, Recorders, Amplifiers, Sound Systems, Test Equipment and Military.

There is no substitute for experience. We solicit your application problems which will receive prompt and courteous attention.

201 M U-47M

TELEFUNKEN
world's finest Microphones

For Life-Like Reproduction

DOES THE WORK OF 5 OR 6 ORDINARY MICROPHONES

Extremely smooth frequency response, wide dynamic range, complete absence of distortion and noise. Readily changeable field pattern. Small outside switch provides either highly directional or non-directional characteristic.

The pencil-type microphone 201 M especially suited for broadcasting TV, recording, and motion pictures is indifferent to changes of temperature and humidity conditions. Its construction ensures continuous dependable operation at 175° F. without affecting its performance.

MODEL U-47M

Condenser Microphone, power supply, cables and plugs.

Complete **$390.00**

Specifications—U 47 M

Frequency response .....± 3db 30-16,000 cps.
Output impedance .....30/50, 200/250 ohms, bal.
Field pattern .....non-directional or cardioid

Output level at 1000 cps.
Matched with 200 ohms—
cardioid 2.8 mV per dyne/cm² (—49 db)
non-dir. 1.7 mV per dyne/cm² (—53db)
Residual noise level equivalent 24 db loudness
Non-linear distortion .....less than 1%

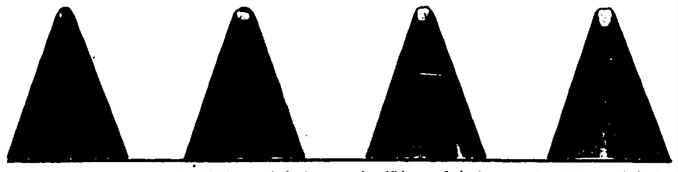
"Diamond needles prove best by actual scientific test and measurement"
—Harold D. Weiler



DIAMOND NEEDLES

new — after 38 hours of playing — after 87 hours of playing — after 1538 hours of playing

Note: This needle shows less wear than the sapphire after 38 hours of playing shown below.

SAPPHIRE NEEDLES

new — after 3½ hours of playing — after 17 hours of playing — after 38 hours of playing

Tests, statements, and photographs reprinted from "The Wear and Care of Records and Styli" by Harold D. Weiler. Published by Climax Publishing Co., 17 East 48th Street, New York 17, N. Y. We recommend this authoritative book on proper record care written in understandable, non-technical language. It contains information vital for the protection of your valuable records. Available at your local dealer.

"The preceding tests have proved conclusively the superiority of the diamond tipped stylus from the standpoint of economy, preservation of records, and the quality of reproduction over a given period of time."

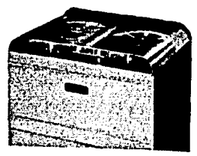
Have you seen and tried the newest

PRESTO



EQUIPMENT?

Here is a sampling of the complete Presto line of precision disc and tape recording and reproducing equipment specifically designed for ease of operation and professional results.

PRESTO SR-11 COMPLETE STUDIO CONSOLE TAPE RECORDER

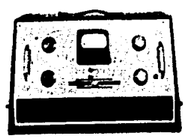
Never so much quality, operational ease and value offered at modest price. Embodies the famous Presto R-11 tape mechanism, matching amplifier-power supply in a sturdy, well designed console cabinet. Three motors for accurate drive; 15" and 7½" per sec. speeds. Price: under $1000.

PRESTO RELIABLE LONG-PLAYING TAPE REPRODUCER PB-17

Automatically reversible for continuous playback of background music. Frequency response uniform from 50 to 8,000 cps (±2 db). Tape speed: 3¾" per sec. Reels up to 14" dia. (4,800' of tape) with dual track. Mechanism will re-cycle or stop after 8-hours of play.

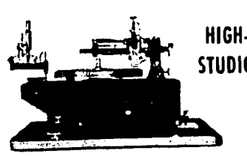
PRESTO HIGH-QUALITY TURNTABLE-DRIVEN TAPE PLAYBACK UNIT TL-10

Powered by mounting on any standard 16" turntable. Equalized output of playback head can be fed directly into high-quality preamplifier, such as standard broadcast speech input equipment. Capstan for 7½" and 15" per sec. when table turns at 78 rpm. Ideal for low-cost, high-fidelity tape playback.



PRESTO PRECISION FIELD TAPE AMPLIFIER 900 A-3

Here is the proper high quality, wide range amplifier to match Presto Tape Transport mechanisms RC-7 and RC-11. Separate power supply eliminates noise. Three microphone input, low distortion. 900-A-1 amplifier identical except for single input transformer.



PRESTO 92-B RECORDING AMPLIFIER FOR VERTICAL RACK MOUNTING

Has low internal output impedance, high degree of feed-back and its response is virtually unaffected by changes in load. Holds distortion to minimum. 60-watt output ample for transient peaks. Push-button selector for recording characteristics. Vertical chassis with removable front panel for instant inspection or servicing.

PRESTO 90-B RECORDING CONSOLE FOR PORTABLE OR FIXED USE

The widely used 90-B features a 3-microphone mixer, input and output controls, has several fixed characteristics as well as variable high and low frequency controls, and V.U. meter. Switching and connectors for double turntable. Highest professional standard materials and workmanship . . . over-all performance equal to finest high-fidelity studio equipment.

PRESTO HIGH-PRECISION STUDIO CONSOLE RECORDER 8-D-G

Unusually flexible in operation and easy to control. Cuts finest instantaneous and master recordings, with choice of seven different feed pitches, plus 250 lpi microgroove in each direction. Direct gear drive at 33⅓ and 76.26 rpm, either speed selected by double-throw switch. Transmission unit is simple, very rugged, and extremely accurate.

PRESTO 16" TURNTABLE 10-B FOR RADIO STATIONS AND RECORDING STUDIOS

An improvement on the long popular model 10-A. Capable of continuous operation by non-technical personnel. Inexpensive and simple to service. Operates at 33⅓, 78 and 45 rpm. With its 3-speed mechanism, the Presto 10-B is an extremely accurate rim-driven table. Available as chassis only or in console cabinet.

PRESTO PORTABLE, HIGHLY ACCURATE PROFESSIONAL-TYPE RECORDER 6-N

A fine, high-quality recorder for portable or stationary operation, whose dependability has made it a 15-year favorite here and abroad. Especially designed for professional users. Presto 1-D cutting head supplied. Equipped with precision overhead mechanism including spiraling feedscrew. May be equipped for microgroove recording at extra cost.

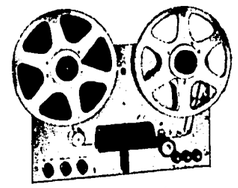
3 WAYS TO MARKET

The IRE Balanced Promotion Package is composed of a monthly magazine, a directory and a show, to do these three marketing jobs:

Product Promotion is the function of advertising in "Proceedings of the I.R.E." which reaches 38,945 net paid, ABC readers of which 35,110 are member engineers (including 3,836 student engineers). The publication is a month-by-month textbook of engineering and radio science, and its advertising keeps the engineer up-to-the-minute with product development. Thus its ads promote products to the "thinking and reading" engineers who design and set the specs for tomorrow's production.

Product Reference is the job of the IRE DIRECTORY. Engineers are highly literate, and what they do not know or remember themselves, they do know where and how to look up. The IRE DIRECTORY is their own reference book for men, firms and products—supplying an accurate source of information—in which advertising is an "insurance" that your facts will be found.



Product Presentation is accomplished economically through the Radio Engineering Show, which attracted 39,302 registered visitors, and served 605 exhibitors in 1954.

New standard of professional recording

Dynacord

PROFESSIONAL TAPE RECORDER

by PENTRON

engineered throughout to NARTB standards

- Portable, may be rack mounted or installed in console.
- High inertia direct capstan drive for minimum flutter.
- New type slow speed "inside-out" hysteresis motor.
- Dynamic braking.
- Interlocked push-button control.
- 3-Head construction facilitates monitoring.
- Accommodates 10½" reels.
- Instantaneous emergency stop.
- Many more superior features.

PENTRON — Canada: Atlas Radio Corp., Ltd., Toronto

RECORD ON MAGNETIC TAPE
And Realize These Advantages . . .

1. Data stored in "live" electrical form . . . ideal input to data reduction equipment.
2. High frequency data reproducible on direct writing recorders by playing back at reduced tape speeds.
3. Data accessible for immediate playback.

RECORD
AT THE SOURCE

Portable Recorders

Data recorders for airborne, mobile, and extreme environmental conditions. Meet vibration Specif. MIL-E-5272A Proc. I. Operate from 28 volts DC and/or 115 volts, 400 C. Self-contained units incorporate all electronic circuitry. Available with up to 13 tracks for data recording DC to 30 KC. Frequency multiplexing on single tape track permits recording up to 196 channels on one multichannel recorder. Any single tape speed 7.5 to 30 ips. *Small Portable Recorder* (above, left) records for 3 minutes at 30 ips, measures 20⅝ x 12 x 12 inches including shock mounting, and weighs 55 lbs. *Long Playing Portable Recorder* (above, right) records for 16 minutes at 30 ips, measures 27⅜ x 15 x 15 inches including shock mounting, and weighs 70 lbs.

PLAYBACK
OR RECORD IN THE LABORATORY

Reproducers

For playback of data obtained on recorders described above or laboratory recording and playback. Designed specifically for data recording and reproduction—*not audio*. Tape speeds, 1.5 to 60 ips. Hi/Lo speed combinations available covering frequency range from DC to 60 KC using FM carrier and direct recording techniques. Operates from 115 volts 60 C with or without Frequency Lock which assures reproduction of original frequencies within ½%. Precision frequency drive also available. Improved and simplified wow and flutter compensation used with FM carrier recording permits high signal-to-noise ratio at even low tape speeds. FM carrier discriminator self-contained and operates without regulator from 115-volt, 60 C line—one-hour overall stability better than 1% of maximum output (10 ma. peak at 14 volts) which will drive galvanometers and direct writing recorders—plug-in assemblies allow use at tape speeds between 1½ and 60 ips. Equipment available completely assembled and wired in standard relay racks.

ANALYZE
IN THE LABORATORY

Automatic Wave Analyzer

Heterodyne type analyzer provides completely automatic fourier analysis (amplitude versus frequency) of vibration, seismic, power line, transient, noise, shock, and similar data. In some instances, an amplitude versus time plot for a given frequency can be obtained. Suited for operation from any source supplying a repetitive signal such as a magnetic tape loop. Frequency range 3 to 2000 cps, variable bandwidth ½ to 45 cps, amplitude accuracy ±5% of reading on logarithmic scale, frequency accuracy ½% of reading, output voltage range 60 db, input impedance 2½ megohms. Analysis recorded and up to 14 inputs can be handled and selected automatically.

Special Data Reduction Equipment

Equipment meeting the needs of a particular application can be designed and manufactured to order. Inquiries are invited.

2. Broadcasting Equipment

Both Aural & Visual; Receivers, Transmitters & Associated Equipment

A Directory of

6 Major Groups
28 Products
Organized by functions for Engineers.

12 Antennas & Accessories.
- 05 AM broadcast transmitting
- 10 FM broadcast transmitting
- 15 TV broadcast transmitting
- 20 Supporting towers
- 25 Tower lighting equipment
- 30 Tower erection & maintenance service

13 Monitor Equipment.
- 05 Frequency
- 10 Modulation
- 15 Remote control monitors
- 20 Video monitors

14 Receivers.
- 05 AM Broadcast
- 10 AM Shortwave
- 15 FM Broadcast
- 20 TV Broadcast B & W
- 25 TV Broadcast—Color

15 Services for the Broadcaster.
- 05 Frequency measurement
- 10 Packaged program services
- 15 Transcription libraries

16 Studio Equipment.
- 05 Consoles & speech input equipment
- 10 TV Cameras
- 15 TV Camera control equipment
- 20 TV Film projectors
- 25 TV Studio lighting equipment
- 30 Turntables

17 Transmitters.
- 05 AM Broadcast
- 10 FM Broadcast
- 15 TV Broadcast
- 20 Relay broadcast & STL equipment

The products and services of the Radio-Electronics industry have been organized into ten basic directories following closely the organization of the IRE Professional Groups. But 104 major product groups are numbered throughout.

Always consult the pink pages at the start of the Directory of firms, for a terminology cross-index, or to find products by name. The pink pages list 608 products by name, as well as under the product groups. Page numbers are given for speed.

TRYLON® T TOWERS

...For Rigid Sway and Twist Limits

From standard broadcast to extended microwave installations, Trylon towers have extreme rigidity to withstand difficult loading conditions with a wide safety margin to spare. Each unit is "tailored" to fit the specific requirements of its application.

Type 3500H—heights to 320 feet
Note the *balanced diagonal bracing* which increases the compression strength and greatly increases resistance to twist.

Type 3600—heights to 520 feet
As shown here, a Trylon 3600 tower is supporting an FM antenna at 270 feet. All Trylon towers are hot-dip galvanized *after* fabrication.

Type 6000—heights to 800 feet
This heavy-duty tower is specifically designed for minimum deflection with VHF-UHF television antennae.

PLUS . . . over 20 years' experience in designing, manufacturing, and installing many types of towers, rotators, antennae shorting and changeover switches, and other antenna specialties.

Trylon Towers are made only by

At least one of your interests is now served by one of IRE's 21 Professional Groups

Each group publishes its own specialized papers in its *Transactions*, some annually, and some bi-monthly. The larger groups have organized local Chapters, and they also sponsor technical sessions at IRE Conventions.

Aeronautical and Navigational Electronics (G 11)	Fee $2
Antennas and Propagation (G 3)	Fee $4
Audio (G 1)	Fee $2
Broadcast & Television Receivers (G 8)	Fee $2
Broadcast Transmission Systems (G 2)	Fee $2
Circuit Theory (G 4)	Fee $2
Communication Systems (G 19)	Fee $2
Component Parts (G 21)	Fee $2
Electron Devices (G 15)	Fee $2
Electronic Computers (G 16)	Fee $1
Engineering Management (G 14)	Fee $2
Industrial Electronics (G 13)	Fee $2
Information Theory (G 12)	Fee $1
Instrumentation (G 9)	Fee $1
Medical Electronics (G 18)	Fee $2
Microwave Theory and Techniques (G 17)	Fee $2
Nuclear Science (G 5)	Fee $2
Quality Control (G 7)	Fee $1
Radio Telemetry & Remote Control (G 10)	Fee $2
Ultrasonics Engineering (G 20)	Fee $2
Vehicular Communications (G 6)	

IRE Professional Groups are only open to those who are already members of the IRE. Copies of Professional Group Transactions are available to non-members at three times the cost-price to group members.

Professional Group on Broadcast and Television Receivers

The field of broadcast receivers is one which is closely associated with the general public, perhaps more so than any other branch of the radio engineering field. In fact, to the layman the term "radio" is synonymous with "broadcast receiver."

As a result, the receiver engineer has been concerned with an additional factor not generally common to other fields, namely, that of responding to—or endeavoring to create—public demand for a product. This factor has played a prominent role in such developments as FM, car radios, portable receivers, and black-and-white television sets. It is now conspicuously evident in connection with current efforts to produce and market color television receivers.

The IRE Professional Group on Broadcast and Television Receivers is playing a major role in making available vitally needed technical information, not only on color television, but on all aspects of the receiver field. Through this exchange of information, the radio and television industry is gaining important data which will be helpful in solving the engineering problems it faces and in successfully meeting the "public demand" factor mentioned above.

The Group has been particularly active in sponsoring technical sessions at most of the national meetings held throughout the country during the year; the Radio Fall Meeting, the Spring Television Conference in Cincinnati, and the IRE National Convention, to mention but a few.

The Group also publishes its own technical publication, called *Transactions*, which is distributed to some 1200 members as a part of their $2.00 assessment fee. The *Transactions*, which is published on a quarterly basis, has become a chief source of information on the latest technical developments in the field of broadcast and television receivers.

W. R. G. Baker

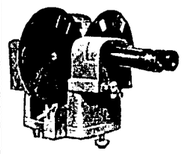
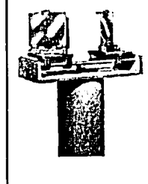
Code number at end of each address refers to product or service sub-classifications listed at the head of the major classification.

Gray RESEARCH



Precision Professional Equipment

FOR TELEVISION and BROADCAST STATIONS
ACCEPTED and USED by ALL MAJOR NETWORKS
FOR RELIABILITY • VERSATILITY • PERFORMANCE



TELOP I . . . TELEVISION OPTICAL PROJECTOR

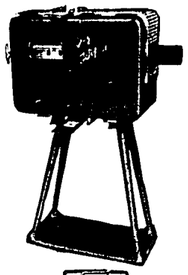
Telop I is one-man operated, economical and reliable. It projects low-cost, easily produced "commercials" for increased profits. The Telop completely eliminates keystoning; any two photographs, glass lantern slides, or opaque cards can be projected, also small objects, with superposition, lap dissolves or fadeout. Metal slides holding either five or eight 4"x5" cards may be used for projection.

3A . . . TELOJECTOR

Compact, portable unit for automatic, remote control of standard 2" x 2" transparencies. Provides uninterrupted continuity with studio effects of fading, lapping and superposition. Slide turrets can be changed instantly.

60A FOUR-WAY FILM MULTIPLEXER

A precision arrangement of mirrors for operation of pairs of projectors simultaneously in a single TV camera or individually into two separate cameras. Also available as a 62A two-way moving mirror multiplexer (illustrated) or a 61A two-way fixed mirror multiplexer.

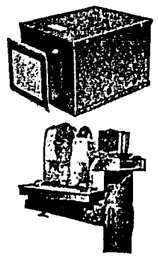


35A MANUAL CONTROL BOX

Gray's Control Box is especially designed for use with the Telojector. Control Box laps, fades, superpositions and permits remote changing of slides.

TELOP II . . . PROJECTOR

For smaller TV stations . . . one man operated . . . will project any combination of slides, transparencies, opaque cards or photographs. Eliminates costly film strips and live talent, yet achieves clear sharp pictures with superposition, lap dissolves and fade-out effects. Small initial investment assures greater profits because of low production and operating cost.



55A FILM CAMERA TURRET

One camera can serve up to 8 projectors with Gray camera turret. Mounted on heavy, welded steel frame, the turret revolves 360 degrees on heavy duty ball bearings with positive placement. Requires minimum space.

13A LIGHT BOX

This attachment will back-light 3¼" x 4" transparencies and make them part of a "commercial" along with opaque cards or other copy. The box mounts directly behind the slide holder groove in the optical channel opening of the Telop.

63A TELOJECTOR SHELF

The Gray Telojector shelf is of steel construction. Strong, sturdy, it is easy to attach to Multiplexer stand. Telojector mounts on shelf.

11B VERTICAL SCROLL DRIVE

The Vertical Scroll Drive will televise rollstock and broadcast running commentary or "commercials"—with or without sound accompaniment. Attaches to the optical openings of the Telop.

12A HORIZONTAL TAPE DRIVE

Horizontal Tape permits televising of 8 mm. news ticker tape. Tape can be projected on any part of screen—top, bottom or middle and superposed on copy televised from another Telop optical opening.

15R REVERSE CLOCK

Designed for time spots and announcements. Clock face is small enough to permit superposition of commercial or other copy. Also available in 15A direct reading model.

106SP TRANSCRIPTION ARM

106SP Transcription Arm meets the strict requirements of modern, highly compliant pick-up cartridges. 3 Cartridge slides furnished, enable GE 1-mil, 2½ mil, or 3 mil cartridges or Pickering cartridges to be instantly installed. Fairchild cartridge slides also available.

108B VISCOUS-DAMPED TONE ARM

Radically new suspension development on the viscous damping principle for perfect tracking of records and elimination of tone arm resonances. For all records—33⅓, 45, and 78 RPM. Solves all record reproducing problems.

602B EQUALIZER

The new 602B Equalizer provides balanced output, permitting operation of the Equalizer into either a balanced or unbalanced line. A convenient control allows instant switching from conventional records to micro-groove.

GRAY RESEARCH

and Development Co., Inc., Hilliard St., Manchester, Conn.

Division of the GRAY Mfg. Co. Originators of the Gray Telephone Pay Station, Gray Audograph and the Gray PhonAudograph.

Gray, as a special service to its many TV customers, now has available a custom-made test pattern with individual call letters for TV stations.

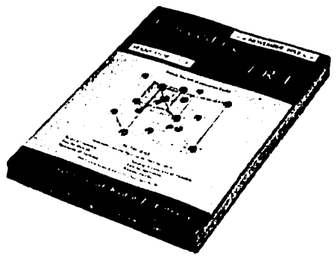
"Radio" is a way of Thinking!

Just as "communication" needed to break its earthbound bonds of wire and take to the air, so industry is seeking and finding in radio controls new "tools" ranging from servo-mechanisms to electronic computers.



THIS IS NO DREAM

Radio engineers are making the "bright new world" which was the dream of men in World War II. Just as radio engineers bridged the lost silence of the sea by ship radio communications in the 1900s, so these same thinkers, as radio physicists unleashed the "radiation" power of the atom, and will harness it to industry. They have brought the picture of the world under your control by a knob in your home television — and have beaten the monotony of endless counting by the electronic computer.

TAKING THE GUESSWORK OUT

Such progress is no "happy accident." Men do not "discover" television — they "engineer" it. A good example is the achievement of color television. From "fission" to "computation" the job is done by an enormous process of information exchange — the methodical and brilliant teaming together of engineering thinking to solve a problem. In radio this work has been done deliberately by a growing engineering society, through its meetings and published proceedings, which unleash the minds of men.

In 1953 "Proceedings of the I·R·E" published 1,818 text pages, exclusive of product news and departmental features. This is the word-count equivalent of seven 500 page textbooks on radio-electronics for engineers, and exceeds the contents of the next two contemporary publications put together. This "high" in genuine reader service was logically matched by advertising worth half a million dollars, by firms investing in the engineers' reading interest.

"Proceedings of the I·R·E"

A Directory of

3. Communications Equipment

All non-broadcast forms of communication; Amateur, Emergency, Facsimile, Mobile, Etc.

8 Major Groups
29 Products
Organized by functions for Engineers

18 Aircraft & Airport Equipment.
- 05 Airborne receivers
- 10 Airborne transmitters
- 15 Airport receivers
- 20 Airport transmitters
- 25 GCA Equipment, etc.

19 Amateur Equipment.
- 05 Antennas & antenna accessories, rotators, etc.
- 10 Receiving equipment
- 15 Transmitters

20 Carrier Current Equipment.
- 20 Complete terminal equipment
- 10 Installation & maintenance
- 15 Repeat & relay equipment

21 Emergency Communications Equipment.
- 05 Despatching equipment
- 10 Walkie-talkies

22 Facsimile Equipment.
- 05 Receiving equipment
- 10 Sensitized paper
- 15 Transmitting equipment

23 Marine Equipment.
- 05 Contract installers
- 10 Pleasure craft radiotelephones
- 15 Shipborne communications equipment

24 Mobile Equipment.
- 05 Antennas
- 10 Central Station receivers
- 15 Central Station transmitters
- 20 Citizen Radio
- 25 Mobile receivers
- 30 Mobile transmitters
- 35 Selective Calling equipment

25 Point-to-Point Equipment.
- 05 Antennas & towers
- 10 Receivers
- 15 Transmitters

The products and services of the Radio-Electronics industry have been organized into ten basic directories following closely the organization of the IRE Professional Groups. But 104 major product groups are numbered throughout.

Always consult the pink pages at the start of the Directory of firms, for a terminology cross-index, or to find products by name. The pink pages list 608 products by name, as well as under the product groups. Page numbers are given for speed.

18. Aircraft & Airport Equipment.

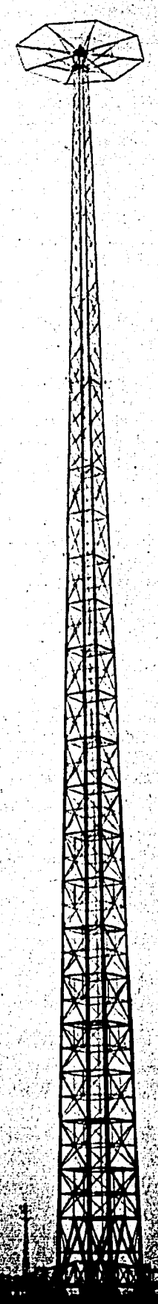
Classifications with a System!

THE IRE Directory Product Classifications have both a pattern and a purpose. They differ widely from most product indexes, deliberately. They aim to organize the hundreds of products and services of a complex technical industry according to the way engineers think. To this end, the product grouping follows the pattern of the IRE Professional Groups, broadly. The result is a division of all products and services into ten fundamental indexes into which 104 basic classifications have been organized.



For detailed identification, these 104 products and services, grouped in the 10 indexes, are further defined into 608 named products. We have tried to avoid oversimplification, and a tremendous amount of information is given by our product number system. But, the basic indexing adds speed. Purely alphabetical directories are as slow and cumbersome as a telephone book. IRE engineers have liked our system better!

Just a little study of the system will help you get great good from this book.

The IRE DIRECTORY is 10 Indexes in one book.

Lehigh Towers

are dependable, durable and include years of experience in designing and fabricating.

LEHIGH 340 foot self-supporting vertical radiator at Radio Station WNEW, Kearny, N. J. ➔

If you are planning to construct an AM, FM or Television station, or if you are looking for a better tower than you have, look to LEHIGH for the best in tower construction.

New Towers in the Sky!

Research information readily exchanged between engineers and scientists has been the forerunner of every radio-electronic advance. This is the priceless service to all of "Proceedings of the I.R.E."

Code number at end of each address refers to product or service sub-classifications listed at the head of the major classification.

35,000

Radio-Electronic Engineers will receive and use the 1954 IRE DIRECTORY

Better and Better and Better!

Up-to-dateness is almost a mania with IRE DIRECTORY compilers! Membership lists are corrected up to May 30th. Industry lists, compiled and classified by high speed IBM sorting methods are accurate to June 15th. No firm's report is older than 18 months.

Information at high speed! "Data the way an engineer thinks" is the key to IRE DIRECTORY classifications. All products are divided into 10 fundamental groups, many of which parallel professional group organization. The grouping plan makes this the fastest working directory you ever used! No components are mixed with test equipment—you turn right to a section where each item belongs.

Yet good engineering detail is maintained. 104 basic classes of products under these ten sectional product directories keep listings from becoming cumbersome, but clearly define products. Overlapping listings are skillfuly eliminated. Simplicity makes this book easy to work with—insures faster finding of facts when forgotten. Thus the faults of terminology listings are avoided.

Completeness is insured! Most firms make many products in a single classification. Wasteful, eye-confusing relisting of the same firms over and over is quite sensibly solved by using a system of codes under the 104 basic headings which actually provide 608 separate classifications. A more complete picture of what each firm's full line is results, but you travel through fewer listings. The "Copp Principle" of Directory indexing makes these lists wide, well marked highways to information —fast.

Machol Edge Index is just one more modern service to help the user find information fast.

Ads positioned with reason! In a DIRECTORY where ads play an important part in supplying information the user wants and needs, it makes good sense to cross-reference every advertiser in each listing so that the user can quickly find more detail. Ads are also placed facing company alphabetical listings, or in the product section in which they properly belong. No effort is spared to "organize" ad information.

More advertisers—more information! Never before have so many advertisers served IRE readers with so much information! The advertisers' list this year is truly a "social register" of this great industry.

THE INSTITUTE OF RADIO ENGINEERS

BRyant 9-7550 • ADVERTISING DEPT., 1475 BROADWAY, NEW YORK 36, N.Y.

Code number at end of each address refers to product or service sub-classifications listed at the head of the major classification.

Part IV COMPONENTS

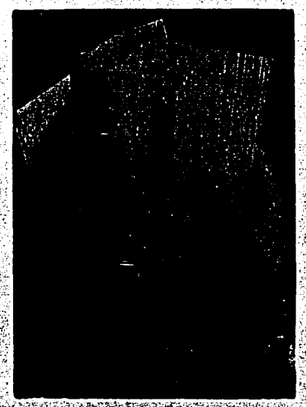
4. Component Parts

The first few times you use this

EDGE INDEX

follow the "How to use" instructions slowly—ONE STEP AT A TIME.

After that you will be able to open easily and almost instantly to the section or letter that you seek.



HOW TO USE

1. **With the directory open on the desk, bend the book almost double in your left hand, with your thumb just below this line.**

2. **From one-line or two-line symbol adjacent to the letter or subject you seek, run your eye across horizontally to a corresponding page-edge symbol.**

3. **Open there with your right hand.**

IT IS EASIER IF YOU "FAN" OR "RIFFLE" THE LAST FEW PAGES WITH YOUR RIGHT THUMB. THE EDGE INDEX COVERING THE OTHER 7 DIRECTORIES WILL BE FOUND OPPOSITE PAGES 240, 400 and 476.

For complete list of products and services, arranged alphabetically for fast reference, see the eight-page pink section preceding page 1.

2	PART I COMPLETE DATA SPREADS

62 Voltage Regulators	399

Classifications with a System!

THE IRE Directory Product Classifications have both a pattern and a purpose. They differ widely from most product indexes, deliberately. They aim to organize the hundreds of products and services of a complex technical industry according to the way engineers think. To this end, the product grouping follows the pattern of the IRE Professional Groups, broadly. The result is a division of all products and services into ten fundamental indexes into which 104 basic classifications have been organized.

YOU will note that we here differ from most directory compilers, for we do not mix meters with motors simply for alphabetical reasons. Products used in "Audio" whether components or complete apparatus form the first fundamental group. Yet, the same manufacturer and product may also appear in the "Component Parts" section. This system gives subject grouping for speed and convenience. A directory should aid a man who has forgotten some detail, or product name. Ours helps by grouping products as one would *think*.

1. **Audio Frequency Equipment** (Products 1 to 11)
2. **Broadcasting Equipment** (Products 12 to 17)
3. **Communications Equipment** (Products 18 to 25)
4. **Component Parts** (Products 26 to 62)
5. **Applications of Electronics** (Products 63 to 70)
6. **Radar, Microwave, UHF** (Products 71 to 74)
7. **Test & Measuring Equipment** (Products 92 to 101)
8. **Services and Materials** (Groups 75 to 91)

   Here we separate the consultant, the fabricating firm, the machine for radio manufacturing, and basic materials from being lost in an alphabetical maze of component and test equipment names.
9. **Education & Publishing** (Groups 102 & 103)
10. **Distribution Functions** (Service 104)

For detailed identification, these 104 products and services, grouped in the 10 indexes, are further defined into over 600 named products. We have tried to avoid oversimplification, and a tremendous amount of information is given by our product number system. But, the basic indexing adds speed. Purely alphabetical directories are as slow and cumbersome as a telephone book. IRE engineers have liked our system better!

For safety, an alphabetical "terminology" index is given, preceding the product system in the pink pages introducing the company index. You will note also that after each firm, its products are listed by number code in the alphabetical list, and that sub-classifications shown by number code in the product indexes give much detail. Just a little study of the system will help you get great good from this book.

The IRE DIRECTORY is 10 Indexes in one book.

1954 I.R.E. DIRECTORY READER SERVICE REPLY CARD

Place a 2¢ stamp on one or more of the perforated cards below, and they will be promptly forwarded to the manufacturers listed on the back. If you prefer to send your specific requirements, a letter would be more advantageous, however be sure to enclose the reply card.

1954 I.R.E. DIRECTORY READER SERVICE REPLY CARD

Below, for your convenience, are six perforated reply cards. Each one has enough space to list three advertisers' names and their page numbers. Forward as many cards as you have questions, and I.R.E. will promptly notify the manufacturer in question to send literature, specifications, and prices to you.

A Directory of

4. Component Parts

36 Major Groups

228 Products in these groups

Organized by function for Engineers

26 Amplifiers.
27 Antennas & Accessories.
28 Batteries.
29 Blowers & Cooling Fans.
30 Cabinets, Consoles, & Enclosures.
31 Capacitors, Fixed.
32 Capacitors, Variable.
33 Chassis & Racks.
34 Coils.
35 Connectors.
36 Converters.
37 Cores.
38 Crystals & Accessories.
39 Delay Lines.
40 Filters.
41 Fuses & Fuse Holders.
42 Magnets.
43 Meters (Indicating Instruments)
44 Motors & Motor Generators.
45 Pilot Lights & Assemblies.
46 Power Supplies.
47 Printed Circuits.
48 Rectifiers, Metallic.
49 Rectifiers, Vacuum Tube.
50 Relays.
51 Resistors.
52 Semi-Conductors (Diodes & Transistors)
53 Sockets.
54 Switches.
55 Telegraph Keys.
56 Thermostats.
57 Transformers.
58 Tuners.
59 Vacuum Tubes, Receiving.
60 Vacuum Tubes, Special Purpose.
61 Vacuum Tubes, Transmitting.
62 Voltage Regulators

The products and services of the Radio-Electronics industry have been organized into ten basic directories following closely the organization of the IRE Professional Groups. But 104 major product groups are numbered throughout.

Always consult the pink pages at the start of the Directory of firms, for a terminology cross-index, or to find products by name. The pink pages list 608 products by name, as well as under the product groups. Page numbers are given for speed.

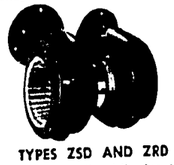
HEINZE BLOWERS

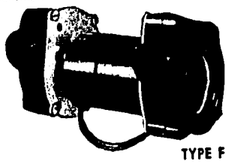


TYPE DD

Double blowers for applications requiring 100 CFM of air. Powered by Type D shaded pole induction motor. Requires infrequent oiling. Non-radio interfering. For 115 volts, AC, 60 cycles, 35 watts, 3150 RPM (free air). Other voltages and frequencies on request.

TYPE DS

Single blower, with all the advantages of Type DD, but approximately half the air delivery. 115 volts, AC, 60 cycles. For CW and CCW operation. 35 watts. 3100 RPM (free air). Other voltages and frequencies on request.



TYPES ZSD AND ZRD

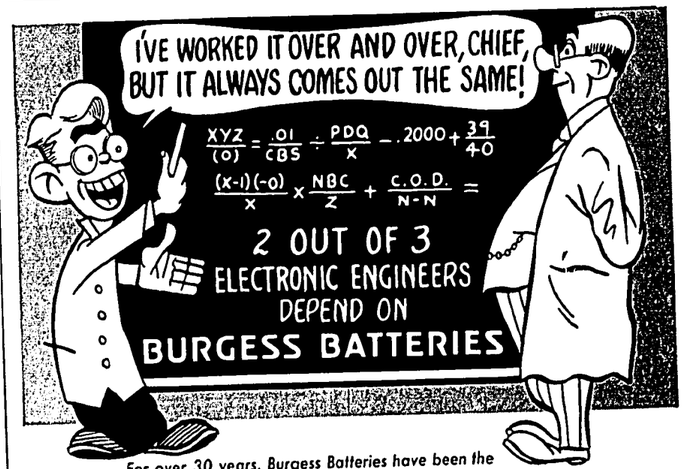
Quiet, dependable units, delivering 100 CFM. 4 pole motor and large balanced air rotor. ZRD has absolute minimum of vibration. 115 volts, AC, 60 cycles, 1650 RPM (free air), 45 watts. Available for 230 volts or 50 cycle operation.

TYPES ZSS and ZRS

Most compact 50 CFM blowers available. Sturdy low speed 2 shaped pole induction motor. 3⅝" balanced air rotor. 115 volts, AC, 60 cycles, 1650 RPM (free air) 40 watts. Can be supplied for 230 volt operation. Various mountings.

TYPE F

For cooling electronic tubes in transmitters, induction heaters and diathermy equipment. 115 volts, AC, 60 cycles, 3000 RPM (free air). F2B, single blower, 10 CFM. F2D, double blower, 20 CFM.



ANTENNA MOTORS

AR AM

Low-voltage AC reversible capacitor-type motors. 24v, 60 cycle AC operation, reversible with a switch. Free load, 3300 rpm, using a 100 mf condenser. For television antenna rotator service.

Planning Heat Dissipation?
L-R BLOWER .... moves AIR
5 to 170 cubic feet a minute

There is a light, compact highly efficient L-R Blower to give you maximum heat dispersion under all climatic or temperature conditions. Each of these blowers requires minimum space and produces maximum C.F.M. Specifications are listed below so that you may choose the size best suited to your needs.

SPECIFICATIONS

MODEL 1½, Wgt. (less motor) .....2½ oz.
Output: 5 to 22 C.F.M. Hgt. 3"
MODEL 2, Wgt. (less motor) .....5 oz.
Output: 10 to 30 C.F.M. Hgt. 3¾"
MODEL 2½, Wgt. (less motor) .....5½ oz.
Output: 20 to 65 C.F.M. Hgt. 4⅞"
MODEL 3, Wgt. (less motor) .....12½ oz.
Output: 40 to 170 C.F.M. Hgt. 6½"

All models have light-wight, high-impact plastic housings, turbo-type wheels and are made for either clockwise or counter-clockwise rotation. Available with or without motor.

Precision wafer-cell construction, .050 to 1.50 inch diameter, .020 to 0.125 inch thick, stacked to provide .001 to .25 amp. at 1 to 1,000 volts. Maximum volume and weight efficiency. Pure D.C. with zero time delay. No activation, vibrators, dynamotors, transformers, rectifiers or filters required. Withstands high acceleration, spin and shock. Exceptionally low noise and low internal resistance. A, B and C voltages in one pack. Radically new silver-zinc primary and secondary high current cells also available with exclusive *self-healing* ion perm-selective separators. Write, wire or phone.

a NEW standard!

The ELMENCO STEATITE-CASED PAPER TUBULAR CAPACITOR has provided the electronics industry with a new standard of performance. The combination of superb quality and dependability coupled with low cost has enabled manufacturers to upgrade their specifications. The ELMENCO PAPER TUBULAR now is the standard to which others must be compared.

- Non-inductive winding
- Mineral oil vacuum impregnation
- Tight moisture-proof seal
- Safe operation at 85° C
- Long life on the shelf or under extreme operating conditions
- Low cost

The steatite tube and baked synthetic resin end-fill provide a seal which rivals that of hermetically sealed construction, resulting in a dependability and longevity previously unequalled. Whether in operation or on the shelf, this paper tubular capacitor will maintain its excellent characteristics for years.

The steatite-tubed capacitor is the only ELMENCO PAPER TUBULAR made because it is of a design superior to others. Whether mica, paper, or ceramic dielectric, a capacitor bearing the ELMENCO name represents the finest product in its field. For those who appreciate quality, it is well to remember that "ELMENCO replaces but is never replaced."

smallest and lightest!

AMP CAPITRON TRADE-MARK **HIGH VOLTAGE CAPACITORS AND PULSE FORMING NETWORKS**

...with outstanding STABILITY and RELIABILITY for application in radar, missile control, and similar guided systems!

AMP CAPITRON Capacitors and Pulse Forming Networks are particularly suited for radar and guided systems not only because of their remarkable size and weight characteristics, but also because of their outstanding stability and reliability in operation. They are designed in each instance for the specific requirements as to size, shape, working or test voltage, capacitance, life or other operating conditions of the equipment in which they are to be used. Inquiries are invited.

AMP Trade-Mark Reg. U.S. Pat. Off. © AMP

- up to 70% size and weight reduction
- wide temperature range
- close capacity tolerance
- no derating
- no drift
- highest known leakage resistance
- low absorption
- dimensional flexibility

AMP is also nationally recognized leader in the field of solderless terminals, simplified wiring devices and automatic wire termination.

ASTRON

quality capacitors filters...

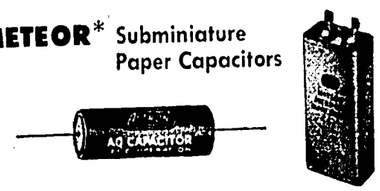
DEPEND ON...INSIST ON...ASTRON

SAFETY MARGIN* Electrolytic Capacitors

ASTRON "SM" SAFETY MARGIN design affords the ultimate in performance over a wide range of operating conditions. Particularly suited for operation in tropical, hot and humid climates, they offer maximum protection under severe operating conditions for long service life.

Leading electronic equipment manufacturers favor Safety Margin Electrolytic capacitors for their reliability and quality.

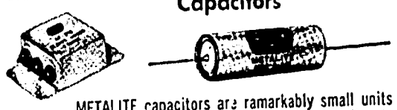
Safety Margin types fill your requirements whether they are for metal cased, cardboard cased or twist prong capacitors.



*Trademark

BLUE-POINT® Molded Plastic Tubulars

BLUE POINT'S tough new bonded plastic shell and unique bonded seal answer all heat and moisture problems. Exclusive new material treatments and design with solid thermosetting vacuum impregnant insure absolutely dependable operation at 85°C without derating. Extremely high heat resistant qualities of the shell and BLUE POINT seal prevent leads from pulling or melting out.



METEOR* Subminiature Paper Capacitors

Operate up to 125°C without derating,
METEORS* use ASTRON'S exclusive new high temperature impregnant X-250*. Over the entire operating range −65°C to +125°C, these miniaturized capacitors have high insulation resistance, low power factor plus a built-in voltage safety factor. METEORS* surpass the most exacting military specifications and are available in a variety of designs for all types of installation.

*Trademark

METALITE® Metallized Paper Capacitors

METALITE capacitors are ramarkably small units designed to meet current needs for subminiature capacitors to fit into ultra compact electronic equipment. Extremely small and lightweight METALITE'S self-healing characteristics prevent failures from momentary over-voltages and surges.

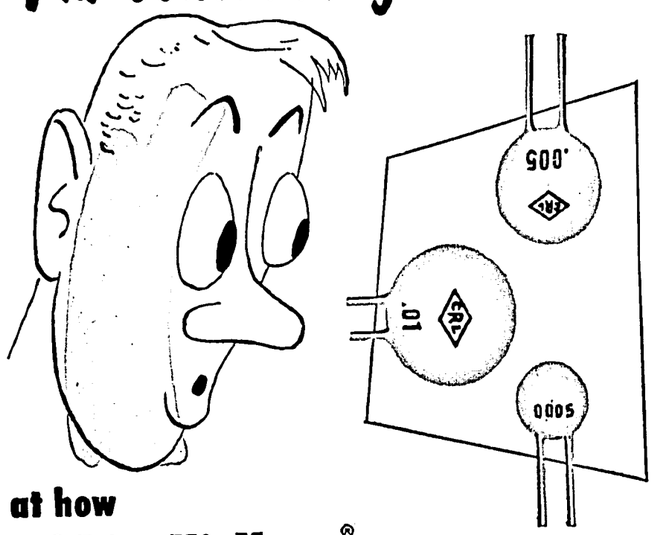
For operating temperatures up to +125°C HY-MET METALITE capacitors with solid thermosetting impregnant offer the desired operating qualities ... stability, vastly improved insulation resistance, low RF impedance and self-healing properties.

METALITE and HY-MET in a wide variety of case styles and operating characteristics meet the requirements for all types of equipment.

OIL FILLED Capacitors

ASTRON-developed, oil filled, hermetically sealed paper capacitors are designed to meet the severe operating requirements and test conditions of specification MIL-C-25A. Designed for military as well as commercial use, they are made to the most exacting quality standards for reliable performance and maximum dependability.

RF NOISE SUPPPRESSION FILTERS



Pioneers in the development and mass production of high efficiency subminiaturized filters, ASTRON engineers have solved the most difficult and diversified noise suppression problems. Latest concepts of filter design plus the newest quality components and production techniques assure unequaled guaranteed performance plus reduced size and weight. Let ASTRON'S filter engineers solve your noise suppression problems.

ASTRON'S extensive experience and modern large scale production can solve all your capacitor and filter problems. ASTRON products are now in use in millions of leading TV sets and other electronic equipment. Start using ASTRON brand today to increase your brand acceptance. Write today outlining your requirements.

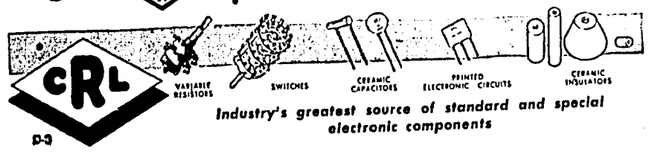
I'm continually amazed

at how BC Disc Hi-Kaps® solve space and design problems

Centralab BC Disc Hi-Kaps can amaze you too — Here's why —

- BC Discs are small in size, cut the third dimension (thickness) to a minimum. (5/32" thin.)
- Stable power factor — Initial, 1.5% at 1 KC.
- High Insulation Resistance—10,000 Megohms.
- Safe Rated Voltages — Rated at 500 VDCW, but tested continuously at 1,250 VDCW. High voltage types to 6000 VDCW available.
- Wide range of capacities — 10mmf to 20,000-mmf.
- No "intermittents" — Positive high temperature bond between ceramic and silver guarantees no movements, plus sure electrical contact.



CENTRALAB BC Discs are so small that 25 of them occupy the space of one cigarette.

CENTRALAB knows the ceramic capacitor field better than any other supplier...

- CRL introduced ceramic capacitors in the U.S. many years before any other supplier entered the field.
- Centralab manufactures from basic powders to finished product right in its own plant ... complete laboratory control over every step in the process.
- CRL has the largest staff of development engineers of any comparable company ... over 150 men available for consultation on your capacitor problems.
- CRL's many plants are highly mechanized for efficient, quality manufacture, and located strategically for best delivery.

Write now for Bulletin 42-4.

ONONDAGA POTTERY COMPANY

Electronics OPCO *Division*

From the basic raw material to the finished product — Onondaga Pottery Company controls every step in manufacturing to insure top quality and complete dependability. Our facilities are ample to fulfill any or all of your requirements for multiple capacitor and resistor-capacitor combinations. We solicit your inquiry.

ONONDAGA POTTERY COMPANY
Syracuse 1, New York

Planet Capacitors "*Engineered for Quality*"

1 year service guarantee

Custom engineered to your specifications or supplied from stock, Planet capacitors meet the highest standards of the industry. Every capacitor is tested mechanically and electrically throughout its manufacture.

This rigid system of quality control makes our unconditional one-year guarantee possible. But making Planet capacitors right from the start means reasonable prices too!

New Celco radar deflection yokes

Celco is at present supplying the country's leading manufacturers of radar equipment with the latest type deflection yokes made to precise specifications. Units are now being manufactured using high nickel alloy steels punched to close tolerances with complex winding distributions and high voltage insulations.

Send drawings of your designs for quotation and take advantage of the **Celco** production experience in this specialized field.

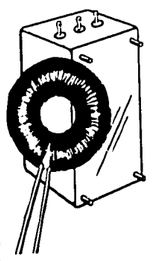
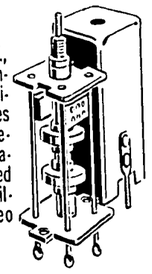
Write for Bulletin MT-1 and Price List



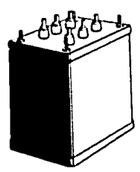
"descaps"... a new series of encapsulated toroids for circuits requiring...

★ High Stability
Available wound on both standard and stabilized cores of 125, 60, 26 and 14 permeability.

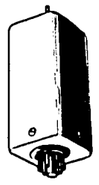


★ High Accuracy
Guaranteed 1% accuracy. When necessary, 1/10 of 1% or 1 turn accuracy can be supplied.

★ Low Cost
Low cost is assured by our improved manufacturing methods.



TOROIDS—FILTERS
TOROIDS: All sizes including "Wedding Rings"—Highest Q's—cased or uncased • Guaranteed .1 of 1% accuracies available with our secondary frequency standard measuring equipment. FILTERS: Hermetic sealed all types—Bandpass—Low pass—High pass—your design or ours.



UNIVERSALS
All types I. F., R. F., B. F. O. coils, etc. conforming to latest military design • All sizes Cup Core coils • Special coils—Permeability Tuned—Shielded—Unshielded • Oscillator coils—Video coils—Chokes.

TRANSFORMERS
Specializing in development and production of 60 cycle and 400 cycle MIL-T-27 transformers—hermetic sealed, plastic encapsulated or open types • Input and output transformers—reactors—power transformers—audio transformers.

Plug-in Housings 30 Models
Versatile aluminum plug-ins, with threaded bases for stud mounting coils, relays, filters, crystals, resistors, condensers, etc. • Special models with permeability tuned coil forms—various pin arrangements—etc.

Your inquiries handled promptly...

INDUCTOROIDS

TOROIDAL INDUCTANCES OF HIGH "Q"UALITY

Toroidal Inductances wound on Molybdenum Permalloy compressed powdered dust cores are available in all practical inductance values. Several core sizes and types are stocked making it possible to supply high Q inductances, especially suitable for *your* frequency and load ranges. We supply Inductoroids either cased or uncased.

Filters and Equalizers

Because of their high Q, great inductance stability, and extremely low pick-up from external fields toroidal coils are highly desirable for such applications as wave filters, equalizers, and similar circuits. We supply these networks built to meet your circuit specifications or we will design and build such networks to meet your performance specifications.

Important! Send us your specific requirements.

Coils of Special Order to the Customer's prints are wound at Moran Electronic Components Inc. to a high quality at reasonable cost—with best possible delivery.

Moran Electronic Components Inc. offers a standard line of most used Chokes of the Solenoid and Universal Pie types, ranging in Inductance from .47 Micro-Henry to 25 Milli-Henry.

Complete Data available on request.

Information at high speed! "Data the way an engineer thinks" is the key to IRE DIRECTORY classifications. All products are divided into 10 fundamental groups, many of which parallel professional group organization. The grouping plan makes this the fastest working directory you ever used! No components are mixed with test equipment—you turn right to a section where each item belongs.

Yet good engineering detail is maintained. 104 basic classes of products under these ten sectional product directories keep listings from becoming cumbersome, but clearly define products. Overlapping listings are skillfully eliminated. Simplicity makes this book easy to work with—insures faster finding of facts when forgotten. Thus the faults of terminology listings are avoided.

Completeness is insured! Most firms make many products in a single classification. Wasteful, eye-confusing relisting of the same firms over and over is quite sensibly solved by using a system of codes under the 104 basic headings which actually provide 608 separate classifications. A more complete picture of what each firm's full line is results, but you travel through fewer listings. The "Copp Principle" of Directory indexing makes these lists wide, well marked highways to information—fast.

3000 Firms listed. The alphabetical directory gives a clear definition of these firms by showing any or all of the ten fundamental groups in which these firms belong after every name.

Ads positioned with reason! In a DIRECTORY where ads play an important part in supplying information the user wants and needs, it makes good sense to cross-reference every advertiser in each listing so that the user can quickly find more detail. Ads are also placed facing company alphabetical listings, or in the product section in which they properly belong. No effort is spared to "organize" ad information.

More advertisers—more information! Never before have so many advertisers served IRE readers with so much information! The advertisers' list this year is truly a "social register" of this great industry.

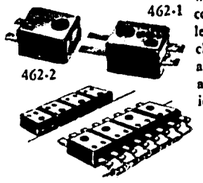
Simplify planning and production of Electronic Gear with ALDEN STANDARD COMPONENTS

❶ You have to provide for IN-OUT CIRCUITS

Alden Detachable Line Cord to bring the power in.

202 FIAC



Reduce all problems to just a simple plug mounted in your equipment. Give customer choice of desired length.

Alden Slide-In Back Connectors centrally organize all in-out leads.

Unique Alden Back Connectors avoid rat's nest, blind wiring of conventional connectors — organize leads in spread out single check point, instantly accessible, color coded and symboled for quick identification.

462-1

462-2

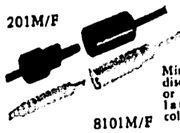
Tiny Alden Sensing Elements act as "tell tales" to protect equipment, monitor operation, permit front-panel checks

Check Voltages with Alden Mini-Test Jacks

Monitor Operations with Alden Pan-i-Lite

Spot Blown Fuse — Alden Fusette

Alden Miniature AC outlets provide power take-outs wherever needed.



402ACE 402ACFL

World's smallest, most rugged AC outlets, with tabs or leads tailored to your specs.

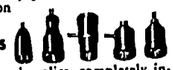
❷ You have to provide INTERNAL CONNECTORS

Alden Connectors, from 1 to 20 contacts, employ standard mass-produced components to fit every need with minimum assembly costs and space requirements: "Top connected contacts" and other unique Alden features provide extra quality and dependability.

201M/F

8101M/F

SINGLE LEAD DISCONNECTS
Miniature hi-voltage disconnects. Phenolic or polyethylene insulation. UL safety collar.



Speaker Connector Series

TWO TO SEVEN LEAD
Beautiful detachable terminal connectors that do away with terminal strips, save soldering and cabling.

TUBE CAPS for every purpose
Completely prewired—Phenolic, Injection

90 SERIES

Quality phenolics, completely insulated for radio receiver, transmitter or TV tubes.

DIAL LIGHT SOCKETS
Designed for low-cost high-volume production, with tailored leads ready to drop aboard your equipment. 4 basic designs you can standardize on for almost all needs.

HA Series

TWO AND THREE LEAD
Excellent miniature antenna lead-ins or signal connectors.

Non-interchangeable Series

TWO TO ELEVEN LEAD
For cables having several connectors, prevent misconnects by specifying Alden Non-Interchangeable Connectors.

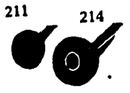
ISL SERIES

Integrally molded with insulation, lead and grid in one piece to meet any environmental and electrical conditions.

500 Series

Metal Seal Series

ONE TO FOUR LEAD
Compact inexpensive connector with UL safety collar for carrying AC power or signal.



MINI DUO-DECALS
Have only 3 parts: "Top Connected" contacts, leads, molding. Voltage breakdown exceeds that of tube base.

212/5 212

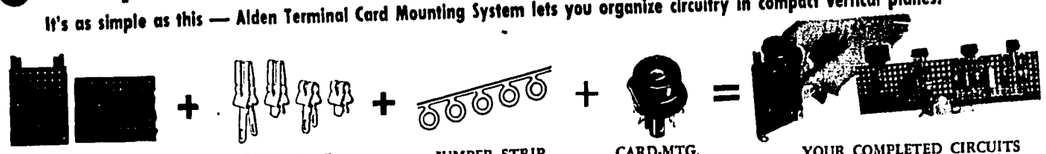
C-R TUBE CONNECTORS
Quality equipment for instruments, TV, radar. Magnal, duodecal, diheptal. 100% insulation each clip and lead.

211 214

Shielded Series

ONE TO FIVE LEAD
Plugs, Connectors and Sockets that answer most needs for 1 to 5 shielded leads.

COMPLETELY MOLDED CABLES

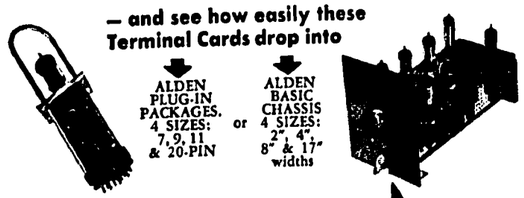


New Alden Technique Solves hi-voltage and corona problems

This 20,000 volt Anode Cable for Color TV comprises nylon Tube Cap, High-voltage Disconnect and Anode Clip, molded by new Alden technique to form integral unit with joints sealed against leakage and corona discharge. We mold cables to your requirements including any number of components.

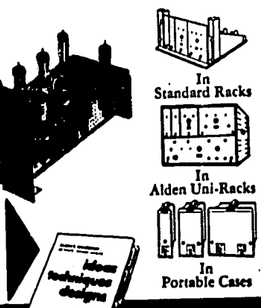
❸ You probably want PLUG-IN CONSTRUCTION

It's as simple as this — Alden Terminal Card Mounting System lets you organize circuitry in compact vertical planes.



PREPUNCHED TERMINAL MTG. CARD + MINIATURE TERMINALS + JUMPER STRIP Eliminates wiring for common circuits + CARD-MTG. SOCKETS = YOUR COMPLETED CIRCUITS FOR PLUG-IN PACKAGE OR CHASSIS

— and see how easily these Terminal Cards drop into

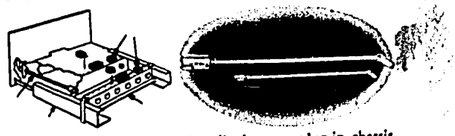


ALDEN PLUG-IN PACKAGES. 4 SIZES: 7, 9, 11 & 20-PIN

or

ALDEN BASIC CHASSIS 4 SIZES: 2", 4", 8" & 17" widths

REQUEST CATALOG describing Alden's complete line of standard components to mount, house, fasten, connect, monitor your electronic circuitry. State your area of interest and we will send samples.



In Standard Racks

In Alden Uni-Racks

In Portable Cases

GET QUICK CHASSIS PILOTING, LOCKING AND EJECTING WITH ALDEN SERVE-A-UNITS

Alden Serve-A-Units install easily in your plug-in chassis so that ½ twist of front handles operate powerful bullet nose cam to pilot, lock or eject your Side Rail guided units into simple "L" Lock Frame.

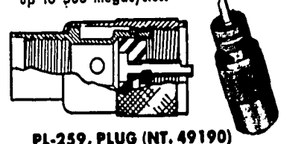
Alden Slide-in Back Connectors make and break all in-out leads as Serve-A-Units draw in or eject.

ALDEN PRODUCTS CO. 113 N. Main St., Brockton 64, Mass.

This is why COAXIAL CONNECTOR CO. makes a line of connectors that is top-rated throughout the industry:

if "know-how" means precision-engineered JAN Connectors;

if "know-how" means the superior product of the knowledge of engineering specialists;



if "know-how" means economy, workmanship, and a short production cycle:

then Coaxial Connector Co. has the kind of know-how that will help you keep your manufacturing operation smooth, superior, and trouble-free!

Rugged service in field and laboratory give our Connectors a *proven dependability*. Quality-controlled to give insurance-plus when you use a Coaxial Connector Co. precision-made Connector.

UHF SERIES CONNECTORS

For dependable low-cost, general purpose use. Satisfactory up to 200 megacycles and may be used with caution up to 500 megacycles.

PL-259, PLUG (NT. 49190)
Non-weatherproof type. Mates with UHF female. Two-piece construction. For use with Cable RG-/U: 8, 9, 10, 11, 12, 13, 63, 65.

PL-259A, PLUG (NT. 49195)
Similar to PL-259. It is a 3-piece unit for ease of handling. Non-weatherproof. Mates with UHF female. SO239.

SO-239, NT. 49194 Receptacle
Mates with male plugs PL-259, PL-259A, UG-203/U. Non-weatherproof, single piece construction. For use with Cable RG-/U8, 9, 10, 11, 12, 13, 63, 65.

Also available special Adapter for the above Plugs (UG-175/U, UG-176/U) used with RG-58/U, RG-59/U, RG-62/U and other small cables.

Design Problems? Engineering information? Special requirements? Our engineering specialists will help you solve your problems.

BRUSHES CONTACTS

SLIP RINGS

...AND SLIP RING ASSEMBLIES

BRUSHES — CONTACTS — ASSEMBLIES

...Use SILVER GRAPHALLOY for applications requiring low electrical noise; low and constant contact drop; high current density and minimum wear.

EXTENSIVELY USED IN:

SELSYNS • GUN FIRE CONTROLS
ROTATING THERMOCOUPLE and STRAIN GAGE CIRCUITS
ROTATING JOINTS • DYNAMOTORS

Wide range of grades available for standard and special applications.

Other Graphalloy Products

Oil-free, self-lubricating Bushings and Bearings (applicable —100° to +300° F.) with expansion coefficient half that of steel will not seize shaft at low temperatures; oil-free Piston Rings, Seal Rings, Thrust and Friction Washers, Pump Vanes.

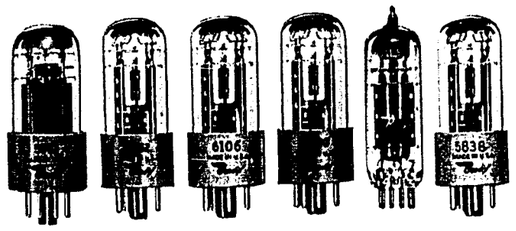
For the most complete line of



AIRCRAFT INVERTERS

The Red Bank Division of Bendix Aviation Corporation is the logical place to find your answer to aircraft inverter needs—and for three significant reasons. First, we offer the widest range of inverters. Second, we design and build each inverter as a complete, unified mechanism. Third, we are equipped to design and produce inverters for all kinds of special-purpose applications. . . . and, in fact, are now engaged in developing inverters up to 5000 VA and for high temperature, high altitude applications.

For "RELIABLE"

ELECTRON TUBES

With electronic controls taking over more and more operational functions in aircraft, it's becoming increasingly important that the electron tubes used be dependable under conditions of high altitude, continuous vibration, varying voltages and frequent shock. Because of their advanced design and construction . . . born of never-ceasing research and special production skills . . . Bendix Red Bank Regular and Special Purpose Reliable Electron Tubes have the dependability necessary to meet severe operating conditions.

For complete details on our aircraft inverters or electron tubes . . . or on our dynamotors, voltage regulators, fractional D.C. motors or A.C. and D.C. generators . . . write

DC-AC CHOPPERS

For 60 Cycle Use

There are twenty-two different types, both single and double pole, built to rigid commercial specifications with the emphasis on long life, low noise level, and extreme reliability. Please write for Catalog 370.

DC-AC CHOPPERS

For 0–500 Cycle Use

All the usual military specifications are met with liberal factors of safety. Before any Chopper is shipped, it is tested twice over the range of −65°C +85°C to give double proof of stamina. Each production lot sample life tested. Please write for Catalog 280.

ULTRA HIGH SPEED RELAYS

Operating time 200 microseconds. Mount in any position. Will cover the range of −65°C +85°C and are factory sealed. Please write for Catalog 337.

RESONANT RELAYS

Permit remote control by radio or carrier current through frequency discrimination. Relays operate only when energized at rating and reject all other frequencies. Eleven types are offered in the range of 153–442 cycles. Please write for Catalog 335.

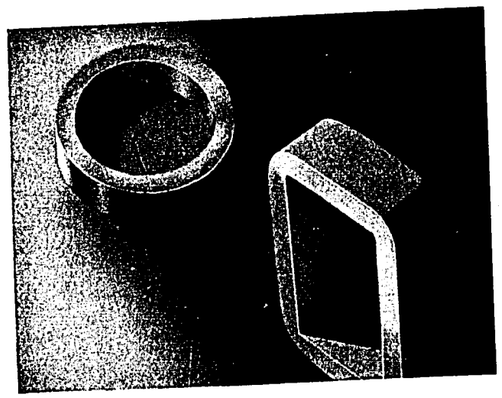
Classifications with a System!

THE IRE Directory Product Classifications have both a pattern and a purpose. They differ widely from most product indexes, deliberately. They aim to organize the hundreds of products and services of a complex technical industry according to the way engineers think. To this end, the product grouping follows the pattern of the IRE Professional Groups, broadly. The result is a division of all products and services into ten fundamental indexes into which 104 basic classifications have been organized.

For detailed identification, these 104 products and services, grouped in the 10 indexes, are further defined into 608 named products. We have tried to avoid oversimplification, and a tremendous amount of information is given by our product number system. But, the basic indexing adds speed. Purely alphabetical directories are as slow and cumbersome as a telephone book. IRE engineers have liked our system better!



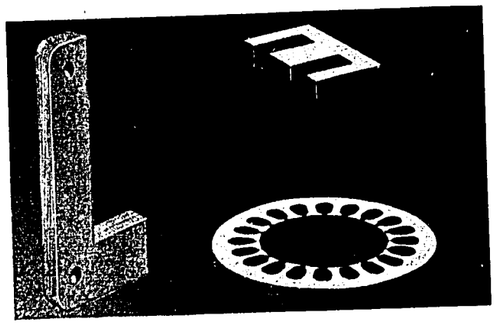
YOU will note that we here differ from most directory compilers, for we do not mix meters with motors simply for alphabetical reasons. Products used in "Audio" whether components or complete apparatus form the first fundamental group. Yet, the same manufacturer and product may also appear in the "Component Parts" section. This system gives subject grouping for speed and convenience. A directory should aid a man who has forgotten some detail, or product name. Ours helps by grouping products as one would *think*.

For safety, an alphabetical "terminology" index is given, preceding the product system in the pink pages introducing the company index. You will note also that after each firm, its products are listed by number code in the alphabetical list, and that sub-classifications shown by number code in the product indexes give much detail. Just a little study of the system will help you get great good from this book.

The IRE DIRECTORY is 10 Indexes in one book.

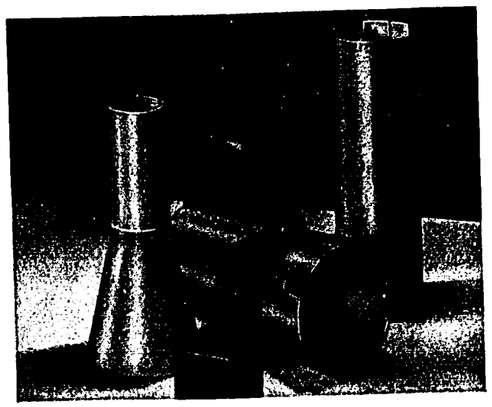
ALL *Performance-Guaranteed* PRODUCTS

MAGNETICS inc. TAPE WOUND CORES



Only Magnetics, Inc. offers Tape Wound Cores, *guaranteed* to meet your performance specifications. The industry's widest selection of standard cores, over 120 standard sizes, gives you a size choice:

Inside Diameter . . . from 0.375-in. to 4.500-in.
Outside Diameter . . . from 0.500-in. to 6.500-in.
Height . . . from 0.125-in. to 4.500-in.
Gauge of Tape . . .001, .002, .003, .004, .006-in.
Materials . . . Hy-Mu 80, 48 Alloy, Orthonol, Magnesil and all other commercially available high permeability materials.



Cores are normally furnished encased in protective plastic boxes, cushioned in special wide temperature compound. Tape is hydrogen annealed to provide exact characteristics to meet your performance specifications.

MAGNETICS inc. LAMINATIONS

Magnetics Inc. Magnetic Laminations are performance guaranteed to meet all production requirements of the electrical and electronic industries. Substantially burr-free, flat laminations in both nickel-iron and all grades of silicon steels are available in standard shapes, such as Rings, EE 24-25, EE 26-27, EI 11, EI 21, EI 75 and EI 375, and in standard gauges from .025 through .006. Laminations are hydrogen annealed when necessary for guaranteed performance. Complete core assemblies can be provided and dies of both tungsten-carbide and hi-carbon, hi-chrome are provided to meet any requirement.

MAGNETICS inc. MAGNETIC SHIELDS

Performance Guaranteed Shields, usually made from Mumetal or A.E.M. 4750, can be made from any other commercially available magnetic or non-magnetic material. Shields are dry-hydrogen annealed, as necessary, and fabricated or drawn to meet production requirements. These shields can be furnished painted or lacquered in any color to your specification.

Write for literature on company letterhead

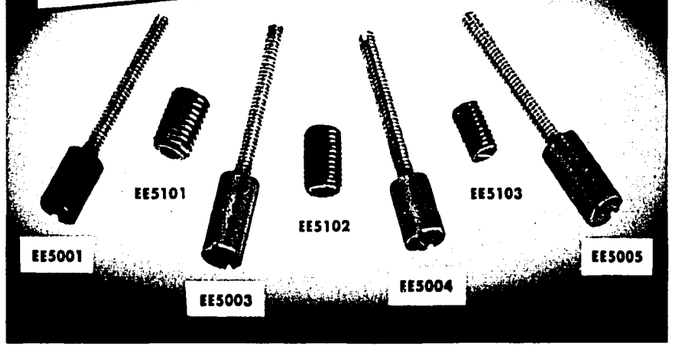
Engineered Economy Iron



CORES *from* STOCK

SPECIFICATIONS — EE5002

Material: Radio Cores No. 10
Test Frequency: 1 MC
Q Tolerance: ± 7½%
Perm Tolerance: ± 2%

Concentricity of Screw and Core:
.015 Maximum at ¾" from end of core
.007 Maximum at end of core

Engineered Economy means:

- **HIGHEST PERFORMANCE**
- **HIGHEST QUALITY MATERIALS**
- **UNIFORM HIGH QUALITY**
- **LOWEST COST**
- **STANDARDIZATION**

DELIVERY FROM STOCK: We maintain an inventory of EE Cores, thus increasing speed of delivery, increasing your inventory turnover, cutting your investment, and eliminating expensive down-time on lines because of inventory "outs."

ENGINEERED ECONOMY IRON CORES . . . AT MONEY SAVING VOLUME PRICES . . . ARE NOW AVAILABLE FROM STOCK. Two years of research and planning have produced the first concrete approach toward mass production in the iron core field. The EE cores illustrated are based on the most commonly used electrical and mechanical standard specifications, therefore design engineers may adapt them easily to a wide variety of uses.

Literature is available upon request . . . please write for our EE specification sheets.

If your needs are not covered in the above group, ask about our "Custom Engineered Cores", made to your exact specifications.

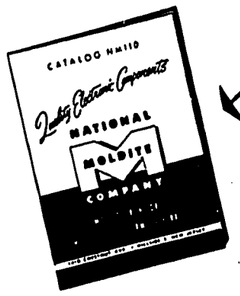
Code number at end of each address refers to product or service sub-classifications listed at the head of the major classification.



Moldite has taken the initiative in establishing accepted electrical standards long required by the electronic industry. Every coil and set manufacturer, every engineer has designed coils to utilize Moldite "standards".

The reasons are obvious. *Moldite Core Standards Offer . . .*

ECONOMY	HIGH QUALITY	UNIFORMITY
AVAILABILITY	INTERCHANGEABILITY	FLEXIBILITY

This means a better product backed by years of Moldite leadership in engineering and research. No one has done more than Moldite to give the industry a superlative core or coil form for every electronic application.

So Design with Moldite Core Standards.

. . . Send for our new Catalog No. 110 — THE MOST COMPLETE LINE OF CORES IN THE INDUSTRY!

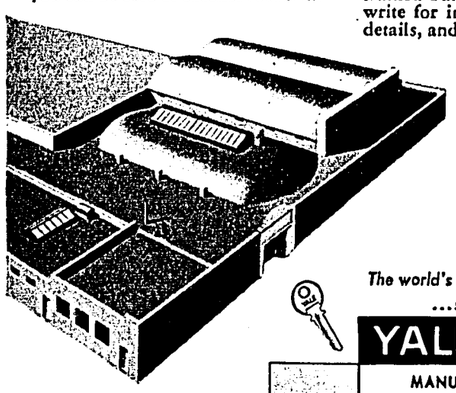
PRECISION-FORMED *Ferrite* PARTS



YALE & TOWNE'S *better Engineering means better Components...* **cores and rods for transformers—yokes—antennae**

Superior engineering know-how and precision production have given YALE & TOWNE its position of leadership in powder metallurgy. And these same factors are your assurance of the *best* in ferro-magnetic parts for TV, radio, and electronics.

With Yale & Towne ferro-magnetic cores and extruded antennae rods, you can be sure of excellent electrical characteristics, maintained with unvarying uniformity and quality regardless of shape, size, or production requirements. As with all of the fine powdered metal products Yale & Towne has produced successfully through the years...you will find your specifications fully satisfied.

Arrange for a visit from a specially-trained Yale & Towne consultant, or write for informative literature, full details, and quotations—today!

Our recently completed addition has greatly expanded our plant facilities—permits us to offer the most extensive and modern facilities available for producing ferrites.

The world's most famous key ...symbol of industrial leadership!

TWO DOZEN . . .
or two thousand

Heemco

How many crystal blanks this piece of quartz may yield is unknown . . . a dozen, two dozen, or perhaps even as many as two thousand. Just how many depends on several factors, foremost of which are the pieces of quartz itself and the skill with which it is cut. What we are sure of though is that every crystal leaving the Heemco plant is designed, manufactured and tested for long-life and accuracy.

Heemco manufactures a complete line of high quality, low frequency crystals from 800 cycles to 500 KC.

THE Hunt CORPORATION
CARLISLE 2, PENNSYLVANIA

Keep Crystal Frequency
Where You Want It With The

New LAVOIE PRECISION CRYSTAL OSCILLATOR OVEN!

The Ultimate in
Compactness...
Speed...
Accuracy

The new Lavoie Precision Crystal Oscillator oven is designed to serve as a plug-in expendable circuit element. It supplies a precise output frequency determined by the interior mounted temperature-controlled crystal. The unit is unusually compact with the vacuum tube and all circuit elements mounted inside the oven case. This design insures a degree of accuracy not normally obtained in a unit of comparable size. If you are designing and building airborne or transportable communications equipment, you will want to know more about this newest Lavoie development. Write for details.

PERFORMANCE CHART

Oscillators	#1	#2	#3	#4	#5
Frequency deviation when first turned on at room temp.	110 cycles	90 cycles	140 cycles	100 cycles	120 cycles
Warm-up time to 50 cycles deviation from room temp.	15 seconds	70 seconds	75 seconds	60 seconds	60 seconds
Frequency deviation at room temp. after warm-up	2.8 cycles	0.67 cycles	3.10 cycles	3.1 cycles	2.8 cycles
Frequency change at room temp. when output is loaded with 10 mmf capacitor	-2.5 cycles	-1.0 cycles	-0.5 cycles	-0.6 cycles	-0.8 cycles
Frequency change at + 55°C ambient	0.02 cycles	0.5 cycles	0.9 cycles	0.35 cycles	0.03 cycles
Frequency deviation when first turned on at + 55°C ambient	450 cycles	300 cycles	300 cycles	480 cycles	520 cycles
Warm-up time to 50 cycles deviation from + 55°C ambient	4 minutes	4 minutes	4½ minutes	4½ minutes	5 minutes

SPECIFICATIONS:

Frequency 500 kilocycles
Max. Deviation after 15 min. warm-up ±0.0012% (6 cycles at 500 kc)
Operating Temp. —55 to +80°C
Pressure 3 to 30 inches mercury
Vibration 10 to 55 cps (0.015 inches amplitude)
Shock 10 G
Humidity 30 days cycling at 100% RH at 50°C
Orientation Any position
Warmup ±0.01% (50 cps) after 3 minutes under any condition; after 1 minute at room temp.
Weight 9 ounces maximum
Connections Miniature 7 pin base
Supply voltages Heater: 6-12-28-110 volts, 30 watts Filament: 6.3 volts Plate: 75 volts, 3 ma max.
Load 100,000 ohm grid circuit, variation of 10 mmf shall not produce frequency charge in excess of allowable stability.
Life Not less than 500 hours without servicing; 2000 hours with reasonable servicing.

You can expect the same precision performance from both the McCoy M-1 and the M-20 "McMite," although the "McMite" is only 1/5th as big. Both crystals are produced up to 110 mc on the 5th overtone. The fact that these two crystals perform equally well in meeting widely varied job specs illustrates the versatility of McCoy design and production facilities. Whatever you need in quartz crystals, McCoy either makes them or can develop them for you. Send for free catalog today on the McCoy line of high quality, precision-made quartz crystals.

M-20 "McMite" is a sub-miniature hermetically sealed unit, adaptable to multi-channel design for communications and frequency control equipment. Can be wired into a sub-miniature selector switch assembly or soldered to a printed circuit terminal board.

M-1 is an hermetically sealed, plated crystal preferred when fundamentals below 5 mc are desired. Easily interchangeable, it plugs into a standard socket. Meets government specification MIL-C-3098A and CAA-R-916; also ARINC No. 401.

DELAY LINES

FIXED & VARIABLE

For: LABORATORY — COLOR TELEVISION COMPUTERS — RADAR — etc.

- 0.6 μsec, 0.8 μsec, 1.0 μsec fixed, for Color T.V.
- Variable for permanent installation in equipment.
- Equalize delays in T.V. studios.
- Miniaturized and special types, wide band, precise.

CONTROL ELECTRONICS CO., INC.
1927 New York Ave., Huntington Station, Long Island, N. Y.

DATA-HANDLING COMPONENTS BY EPSCO

Epsco components are units having unusual characteristics intended for application in systems where reliability is of primary importance. Every effort is taken in the manufacturing process to insure that each unit more than meets its electrical and mechanical specifications.

MAGNETIC CORE STORAGE ELEMENTS

Units capable of operating at exceptional high rates of data transmission with unusually low power requirements. May be used as shift registers control elements and storage elements at megacycle pulse rates.

MAGNETIC RECORDING HEADS

Particularly designed for magnetic drum recording systems Epsco recording heads are low cost units which may be advantageously applied wherever gaps of 1 mil or greater are desired.

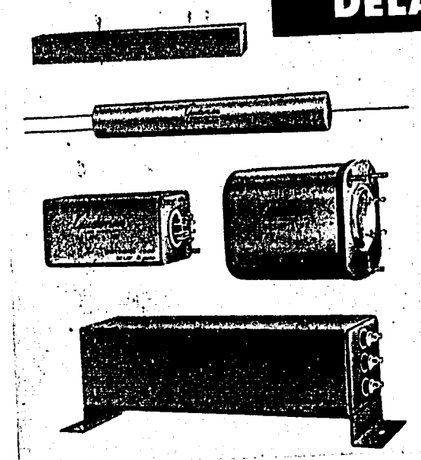
PULSE & VIDEO TRANSFORMERS

Complete line of miniature encapsulated and hermetically sealed pulse transformers in a wide variety of turns ratios characteristic-impedance levels, etc. Standard units are available from stock—Rapid delivery can be made on both sample orders for special units and subsequent production. Unusual uniformity and temperature stability. Extremely large ratios of droop time to rise time (i.e. extremely wide band widths; on the order of 3000:1).

LUMPED-CONSTANT DELAY LINES

Exceptionally high delay to rise time ratios and exceptionally low attenuation—packaged to customer specification. Units exhibit less than 0.3% change in total delay over the temperature range −65°C to +150°C.

DISTRIBUTED CONSTANT DELAY LINES



Ultra-stable miniature units having exceptional delay to rise time ratios and uniformity from unit to unit.

EPSCO, INCORPORATED

126 Massachusetts Avenue — Boston, Mass.

Precision

MINIATURE DISTRIBUTED PARAMETER DELAY LINES

to your specifications

SPECIFICATION RANGE

Delay: .01 to 20 microseconds

Rise Time: .07 √ delay to .8 √ delay

Characteristic Impedance: 50 to 3300 ohms

Ripple Content: 10, 5 or 2%

Operating Temperature Range: −65° to 125° C (to 200° C on special order)

All models are Epoxy impregnated and encapsulated or hermetically sealed to meet military environmental requirements.

- Also available to your specifications: Continuously Variable, Decade Variable, and Lumped Parameter delay lines.
- Your inquiries regarding specific applications are invited. Quotations will be made without obligation.

Radio-Electronic Engineers will receive and use the 1954 IRE DIRECTORY

Better and Better and Better!

Up-to-dateness is almost a mania with IRE DIRECTORY compilers! Membership lists are corrected up to May 30th. Industry lists, compiled and classified by high speed IBM sorting methods are accurate to June 15th. No firm's report is older than 18 months.

Information at high speed! "Data the way an engineer thinks" is the key to IRE DIRECTORY classifications. All products are divided into 10 fundamental groups, many of which parallel professional group organization. The grouping plan makes this the fastest working directory you ever used! No components are mixed with test equipment—you turn right to a section where each item belongs.

Yet good engineering detail is maintained. 104 basic classes of products under these ten sectional product directories keep listings from becoming cumbersome, but clearly define products. Overlapping listings are skillfuly eliminated. Simplicity makes this book easy to work with—insures faster finding of facts when forgotten. Thus the faults of terminology listings are avoided.

Completeness is insured! Most firms make many products in a single classification. Wasteful, eye-confusing relisting of the same firms over and over is quite sensibly solved by using a system of codes under the 104 basic headings which actually provide 608 separate classifications. A more complete picture of what each firm's full line is results, but you travel through fewer listings. The "Copp Principle" of Directory indexing makes these lists wide, well marked highways to information —fast.

Machol Edge Index is just one more modern service to help the user find information fast.

Ads positioned with reason! In a DIRECTORY where ads play an important part in supplying information the user wants and needs, it makes good sense to cross-reference every advertiser in each listing so that the user can quickly find more detail. Ads are also placed facing company alphabetical listings, or in the product section in which they properly belong. No effort is spared to "organize" ad information.

More advertisers—more information! Never before have so many advertisers served IRE readers with so much information! The advertisers' list this year is truly a "social register" of this great industry.

Why BUSS FUSES give "Trouble Free" Protection

No matter when a BUSS fuse is called upon to operate, you can be sure of dependable and accurate electrical protection. For every BUSS fuse is tested in a sensitive electronic device that rejects any fuse not correctly calibrated, properly constructed and right in all physical dimensions.

This insistence on perfection is the reason manufacturers and service organizations can rely on BUSS as the one source for "trouble-free" fuses.

And by standardizing on BUSS fuses, you can simplify your buying, stock handling and records. The line is complete: standard type, dual-element (slow blowing), renewable and one-time types . . . in sizes from 1/500 ampere up — plus a complete line of fuse clips, blocks and holders.

Should you have a special problem in electrical protection — our fuse research laboratory and its staff of engineers are at your service to help you select the right fuse for the job — and if possible a fuse already available in wholesalers' stocks.

FUSETRON

TRUSTWORTHY NAMES IN ELECTRICAL PROTECTION

BUSS

Makers of a complete line of fuses for home, farm, commercial, electronic and industrial use.

BUSSMANN Mfg. Co. (Division of McGraw Electric Co.)
University at Jefferson, St. Louis 7, Mo.

METALLIZED

GLASS *INDUCTANCES*

OUR STANDARD TOLERANCES
± .0003 I.D.
± .0005 O.D.
TO .020 WALL

PRECISION FORM GLASS PARTS

Equipment Manufacturers have long been seeking lower drift components to further stabilize the performance of equipment in the higher frequency ranges. When metallized glass forms were first introduced, great improvements were experienced, but constructional methods limited the shapes and electrical qualities for electronic applications. Now, another great improvement is available. BEL Fuse Inc. is now offering a wide variety of features heretofore unavailable, such as;

GLASS TUBE TRIMMERS

BEL trimmer forms and complete assemblies are available in a wide variety of ranges. Let us quote on your present parts and help design stable glass into your product.

- EXTREMELY HIGH TOLERANCES TO GUARANTEE UNIFORMITY IN PRODUCTION—Coil forms are held to ± .0003 I.D., ± .0005 O.D. with wall thickness down to .020.
- VARIANCE OF COIL WINDING PITCH TO ANY SPECIFICATION (LINEAR OR NON-LINEAR).
- ANY PATTERN METALLIZED ON GLASS FORM OR CORE.
- METALLIZED GLASS CORES TO FURTHER REDUCE DRIFT.
- BEL PRECISION INDUCTANCES CAN BE HELD TO ± 0.5 MEG. OVER 900 MEG. BAND SPREAD IN PRODUCTION QUANTITIES.
- INDUCTANCE AND CAPACITANCE COMBINATIONS METALLIZED ON ONE UNIT.
- MOUNTING BRACKETS AND COMPLETE ASSEMBLIES.
- METALLIZING AVAILABLE ON OUTER OR INNER SURFACE OF COIL FORM.

Custom Metallizing on Ceramic, Glass and Plastic Materials

WE ALSO MANUFACTURE A COMPLETE LINE OF STANDARD AND SPECIAL APPLICATION *Fuses*

GLASS TUBE AND CERAMIC — 8AG, 3AG, 4AG, 5AG.
AND
FUSE MOUNTINGS

BEL FUSE INC. specializes in glass tube Fuses to Original Equipment Manufacturers. The long list of large and small firms who list BEL Fuse as their prime supplier for both standard and specialized fuse requirements is excellent testimony to the high quality and prompt service we offer. The flexibility of the BEL Fuse Organization permits fast, efficient output of special application fuses. Our Engineering Department welcomes your special fusing problem. Full data and U.L. listings available on request.

NEW lower priced FOCOMAG USES SINGLE FERRITE MAGNET

Another HEPPNER First

- Lower priced, compact. Cuts receiver costs. Uses only ONE ferrite magnet (an exclusive feature).
- Superior focusing - more uniform field. The sintered ferrite is extremely uniform throughout. Focuses all tubes up to 27".
- Completely shielded. No harmful external field.
- Extended focus range has very fine adjustment to exact focus.
- Built-in centering device.
- Flexible nylon adjusting shaft eliminates breakage.
- Picture positioning lever. You specify mounting arrangement.

Lower your set costs with this NEW FOCOMAG. Write today for further information.

HEPPNER MANUFACTURING COMPANY

IRE provides all THREE

"Proceedings of the I.R.E."

puts your product promotion monthly before the "thinking and doing" engineers in the fabulous, fast-moving radio-electronic industry. Circulation 38,945 (ABC).

Founded in 1913, "Proceedings of the I.R.E." is the authoritative work-book of America's fastest expanding industry. In it, electronic advances, years ahead of the times, are published every month, thus keeping engineers up to the moment on all that is new in engineering research and application. Its advertising is a constant product parade of the best this industry manufactures. A vital service to all men who specify and buy, it is a proved vehicle for your consistent product promotion—*with prestige!*

IRE DIRECTORY

provides 35,000 IRE members educated to buy and specify with your detailed product data for ready reference all year long.

The IRE DIRECTORY is their working encyclopedia . . . it organizes, codes, simplifies and "indexes for use" a vast and complex industry. They look to its listing of men, firms and products as vital working information. Wherever you find IRE members, you'll find IRE DIRECTORIES close at hand for ready reference. The cost of keeping your product story before 35,000 engineers is less than you'd expect. The price of one page is less than one-half the three cents postage required to mail 35,000 letters.

RADIO ENGINEERING SHOW

. . . the eye-opening event of each radio-electronic year . . . where over 40,000 engineers come to you for all that's new.

Bringing buyers and sellers face to face to discuss engineering needs and product performance is one of IRE's great services to an industry where understanding is the key to progress. The Radio Engineering Show completes with actual product presentation the balanced promotion package of "Proceedings of the I.R.E." for product promotion and the Radio Engineers Directory for product reference.

Specialists in Magnetic Materials

Standard Designs—Special Shapes

Permanent Magnets

Magnet Design—Bulletin 151. Written for the design engineer. Covers application, properties, design problems and testing of permanent magnets.

Standard Magnets—Catalog SM-1252. Complete data with dimensional drawings of standard magnets offered from stock for working models, small requirements, without special tooling.

Core Materials

Laminations—Bulletin L-752. Data on stamped silicon-iron laminations covering material applications, general specifications, typical value graphs. Also covers T & S OrthoSil oriented materials.

Wound Cores—Bulletin WC-353. New bulletin describing T & S Wound "C" and Toroidal Cores. Complete with specifications and value graphs.

Select the bulletin or catalog you need—write Thomas & Skinner today.

Why 38,799 Engineers have joined The Institute of Radio Engineers

BENEFITS

Get to know your fellow engineers—attend section and professional group meetings—keep up with engineering progress.

o o o

Get 12 great issues of Proceedings of the IRE. . . . A working textbook up-to-the-month on practical radio-electronic engineering.

o o o

Get the annual IRE DIRECTORY . . . an industry between covers . . . men, products, firms.

o o o

For membership information, write to:

Institute of Radio Engineers
1 East 79th Street
New York 21, N.Y.

At least one of your interests is now served by one of IRE's 21 Professional Groups

You should join and get these benefits!

Each group publishes its own specialized papers in its *Transactions*, some annually, and some bi-monthly. The larger groups have organized local Chapters, and they also sponsor technical sessions at IRE Conventions.

Aeronautical & Navigational Electronics	Fee $2
Antennas and Propagation	Fee $4
Audio	Fee $2
Broadcast & Television Receivers	Fee $2
Broadcast Transmission Systems	Fee $2
Circuit Theory	Fee $2
Communications Systems	Fee $2

TERMALINE-THRULINE Coaxial Line Instruments

MODEL 67

TERMALINE Direct-Reading RF Wattmeters 30 mc-500 mc; 50 ohms; ½ W-5 KW — Load Type
THRULINE Direct-Reading RF Wattmeters 25-1000 mc; 10-500 watts — "Thru" Type

TERMALINE Wattmeters

The TERMALINE wattmeter is a direct-reading, absorption type instrument for simple, fast and accurate power measurement of transmitters operating between 30 mc and 500 mc. With the TERMALINE coaxial load resistor dissipating all power applied, a crystal voltmeter circuit built into the input connector of the wattmeter feeds a dc meter which is calibrated directly in RF watts. Accuracy of 5% of full scale or better is assured. Model 611 is the commercial version of the Army-Navy ME-11/U RF wattmeter, widely used by all government services. Most transmitter manufacturers use the TERMALINE wattmeter for production and field test work and recommend it to maintain performance.

Frequency Range .. 30 to 500 mc. (See Table)
Power Range ..... ½ watt to 5000 watts
Impedance ..... 50 ohms
Accuracy ..... 5% of full scale. VSWR less than 1.1

Model	Freq. Range	Max. Power	Ranges	Scales	Input Connector
611	30-500 mc	60 W	2	0-15 0-60	Female N. Takes UG-21/U plug
612	30-500 mc	80 W	2	0-20 0-80	Female N. Takes UG-21/U plug
67	30-500 mc	500 W	3	0-25 0-100 0-500	Coplanar. Adapter to UG-21/U supplied. Available accessories: RG-17 and RG-19 Cable assemblies, adapters to rigid lines.
67C	30-500 mc	2500 W (Water cooled)	3	0-100 0-500 0-2500	
824	30-220 mc	5000 W (Water cooled)	1	0-5000W	

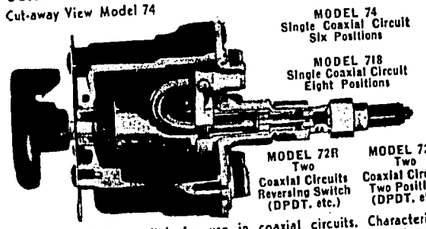
Special scale Model 61 for low powers such as 0-1, 0-5 watts also available.

MODEL 81

TERMALINE-Coaxial Terminations

The Termaline coaxial load resistor is designed to have a constant 50 ohm impedance over a wide frequency range. Its unique design puts reactance to work and produces an almost purely resistive load, with little or no sensitivity to frequency change. The active power dissipating portion is the outer surface of a cylindrical film-type resistor, which forms the center conductor of a special self-terminated coaxial structure.

Major use is as a dummy load for high frequency transmitters. Being non-radiating, adjustment of transmitters can be made without violation of FCC rules. Thousands are now being used in military equipment. It is incorporated as standby in many commercial transmitters and as a test load.



50 ohms 5w.-2500w.

Model	Max. Power	Useful Freq. Range	Max. VSWR	Input Connector
80-F	5 W	0-4 KMC	1.2	Type N Female
80-M	5 W	0-4 KMC	1.2	Type N Male
80A	20 W	0-500 MC	1.1	Type N Female
81	50 W	0-4 KMC	1.2	Type N Female
81B	80 W	0-4 KMC	1.2	Type N Female
82	500 W*	0-3 KMC	1.2	Coplanar. Adapter to UG-21/U supplied. Available accessories: RG-17 and RG-19 Cable assemblies, adapters to rigid lines.

MODEL 718
Single Coaxial Circuit
Eight Positions

MODEL 72R
Two
Coaxial Circuits
Reversing Switch
(DPDT. etc.)

MODEL 72-2
Two
Coaxial Circuits
Two Positions
(DPDT. etc.)

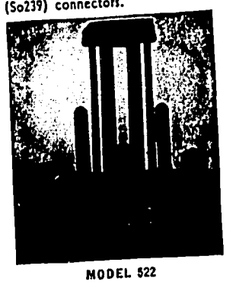
This is a 50 ohm switch for use in coaxial circuits. Characteristic impedance is maintained through all switch details and low standing wave ratios result. In V.S.W.R., switch is comparable and as good as the connectors and cable with which it is used. Type N female connectors are standard on all models to receive UG-21/U series plugs. Adaptors may be used to enable switch to be used with other cable and connectors.

Model 43 Thruline DIRECTIONAL WATTMETER

Reads Directly . . .
→ WATTS FORWARD
WATTS REFLECTED ←
. . . In 50 Ohm Coaxial Lines

FREQUENCY RANGE, MEGACYCLES				
25-60 mc	50-125 mc	100-250 mc	200-500 mc	400-1000 mc
10 W 25 W 50 W 100 W	10 W 25 W 100 W	10 W 25 W 50 W 100 W	10 W 25 W 50 W 100 W 250 W	10 W 25 W 50 W 100 W
500 W	500 W	500 W		

Note: ELEMENTS must be specified for both power and frequency range.
Thus: Element, 100 watt, 100-250 mc, is correct ordering information.



The Thruline Wattmeter is a direct reading wattmeter designed for insertion between transmitter and antenna or load resistor. It provides a simple, accurate means for measuring power into the load or power reflected by this load. Full scale power range and frequency range are determined by the selection of plug-in elements as shown in the table.

The entire instrument is housed in a rugged cast aluminum case equipped with sockets for extra elements and with a carrying strap. Available with female "N", male "N" or female UHF (So239) connectors.

LOW PASS RF FILTER

Suppression of low order harmonics in VHF and UHF transmitters may be handled thru use of these filters. Insertion loss and VSWR are very low thru pass band. Rugged construction thruout assures reliability. All are of 50 ohms impedance and are reversible with equal results. Attenuation in pass band is less than ½ db and in stop band 40 db or better is realized.

MODEL	PASS BAND	STOP BAND	MAX. POWER	VSWR	CONNECTORS
522	0-400 MC	500-2000 MC	150 W	1.35	One male and one female N
819-1200	0-1200 MC	1900-4000 MC	100 W	2 to 1	One male and one female N
819-7	0-1200 MC	1800-4000 MC	3.5 KW	2 to 1	Coplanar. For use with Models 67 and 67C

GREIBACH METERS

—the revolutionary new meter WITHOUT bearings

- 1,000,000 ohms per volt
- Ultrasensitive—1 microamp full scale with 4500 ohms internal resistance
- Multirange WITHOUT shunts or resistor dividers
- Shockproof—withstands up to 600 g shock
- High precision—¼ of 1% accuracy
- Rugged—will withstand 100,000% overload
- No parallax—light pointer movement

GREIBACH INSTRUMENTS CORPORATION
METUCHEN, NEW JERSEY • MEtuchen 6-2800

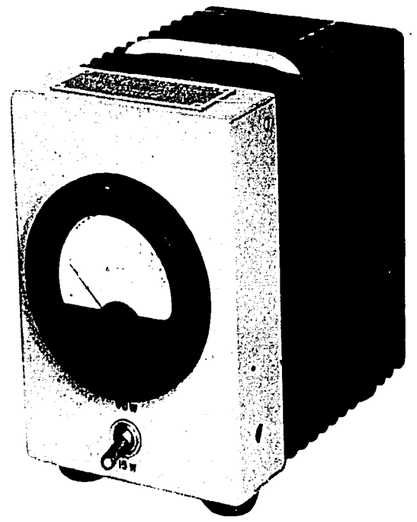
RF WATTMETER and DUMMY LOAD, PM-11

GENERAL DESCRIPTION: The RF Wattmeter PM-11 is an absorption type wattmeter consisting of an oil filled, air cooled, coaxial load resistor and a voltmeter calibrated to read watts. The Wattmeter is suitable for use as a field or laboratory test instrument, is completely shielded and non-radiating, permitting transmitter testing and adjustment without interference. The meter box is easily detached, permitting location of the load resistor at a remote point. In cases where power measurements are not required the load resistor may be used as a dummy load.

POWER RANGES: 0-25 watts or 0-100 watts, selected by switch on front of meter box.

DUMMY LOAD: 50 ohms impedance capable of 100 watts dissipation, in still air, continuously.

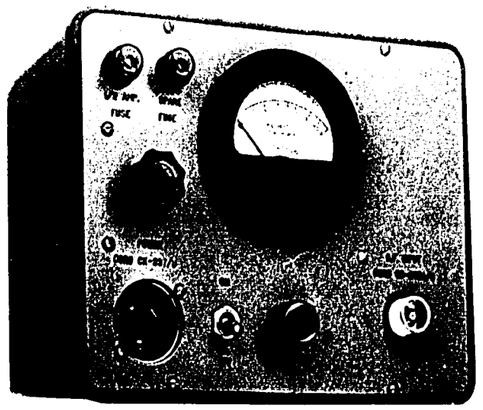
VOLTMETER CIRCUIT: Uses 1N82 silicone diode crystal, and sensitive 200 micro ampere sealed meter. May be calibrated for any scale range from 0-7.5 w to 0-100 watts. Spare crystal included.



RECALIBRATION: May be recalibrated using 60 cycle A.C.

INPUT: Coaxial Type N, using modified UG58-A/U connector.

VOLTAGE STANDING WAVE RATIO: Less than 1.15 from D.C. to 800 MC.



ACCURACY: ±5% from 0-100 Watts.

FREQUENCY RESPONSE: ±5% from 30 to 700 MC.

RF WATTMETER & DUMMY LOAD, PM-10
Power Ranges: 0-15 watts or 0-60 watts, selected by switch on front of meter box.

RF WATTMETER & DUMMY LOAD, PM-15
Power Ranges: 0-125 watts or 0-500 watts, selected by switch on front of meter box.

50 KW PEAK READING RF POWER METER PM-12

The P. M. 12 Peak Reading Power Meter is designed to accurately measure the peak power of pulsed RF signals in the range of 2 to 700 MC with PRF of 800 to 10,000 pps and pulse duration of .5 micro-seconds or more.

It is capable of dissipating 50 KW peak power with an RF duty cycle of .002.

This test set may also be used as a dummy antenna, rated for 100 watts maximum average power for any frequency within its range.

The 52 ohm coaxial input circuit is fitted with a type N or UG61A/U receptacle to mate with a UG59/U connector.

This test set is 110V, 60 cycles powered and is completely self contained in a cabinet 7 in. x 9 in. x 9 in.

SPECIFICATIONS

USE	Peak reading power meter. Dummy Antenna.
POWER DISSIPATION	100 Watts average, 50 KW Peak.
FREQUENCY RANGE	2 to 700 Megacycles.
pulse rate	200 to 20,000 pulses per second.
pulse width	.5 microseconds to DC.
VSWR	Will not exceed 1.15 at any frequency in its range.
ACCURACY	Absolute 10% Relative 1%
INPUT	51.5 ohm coaxial, type N or UG 61 A/U receptacle.
CALIBRATION	May be recalibrated using 60 cycle ac.
CONSTRUCTION	Meets Jan specifications for moisture, humidity, shock, and vibration. Meter is sealed and ruggedized, Jan approved components used throughout.
SIZE	7 in. high, 9 in. wide, 9 in. deep.
POWER	105 to 120 volts, 60 cycle, 10 watts.

international instruments
INCORPORATED
P.O. BOX 2954, NEW HAVEN 15, CONN.

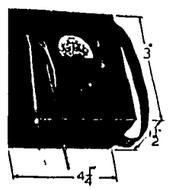
1" and 1½" miniature panel meters

international instruments, specialists in the design and manufacture of miniature panel meters, FIRST in this country to design and manufacture a 1" barrel diameter meter, FIRST to produce 1" and 1½" illuminated meters, FIRST to produce 1½" DB and VU meters and FIRST to develop 1" long scale meters. This record of past achievement plus modern plant and test facilities, extensive experience and skilled personnel combine to make ***international*** the logical source for your miniature meter needs.

international panel meters are miniature D'Arsonval instruments housed in metal cases. Models for government or commercial applications are available. Accuracy is within ± 3% of full scale deflection for DC readings, and ± 5% for AC. Model 100 and 150 Meters are easily mounted by means of threaded barrel ring. Model 153 Meters supplied with mounting screws. A wide variety of ranges are available starting from 0-100 microamperes. Special scales, sensitivities, ranges, and other modifications can be produced. Consult our Engineering Department giving details of special requirements.

MODEL 150
1½" barrel diameter Full 90° scale arc, scale length 1.322".

MODEL 100
1" barrel diameter Full 90° scale arc, scale length .770". Self-contained, ready for use.



MODEL 153
1½" barrel diameter Designed to meet MIL-M-3823 requirements.
